From

COLONEL R. M. MACDONALD,

Director of Public Instruction,

Madras.

To

THE HON. D. F. CARMICHAEL,

Chief Secretary to Government,

Fort St. George.

Introduction.

SIR,—I have the honor to submit my Report on Public Instruction for 1876-77. The year has been a disastrous one. A terrible famine has desolated a large portion of this Presidency. Epidemic disease has followed in the wake of the famine, and two of the Northern Districts have suffered severely from cyclones. It can scarcely be supposed that the progress of education has not been affected by these calamities.

I.—INSPECTING AGENCY.

Changes among the Inspectors.

2. In the early part of the year Mr. Caldwell went on leave to Europe and was succeeded in the charge of the 4th Division by Mr. Gopal Row, but the state of Mr. Gopal Row's health compelled him to obtain leave in November, and Mr. Marden was placed in temporary charge of the 4th Division in addition to his own. Mr. Marden himself went on leave to Europe in February and Mr Kershaw was sent down to take charge of both Divisions, being succeeded in the 1st Division by Mr. Metcalfe. The 4th Division was therefore practically without an Inspector for about five months, and two districts in it, viz., North Arcot and Salem were not visited by any Inspector during the year. The 2nd Division was under the charge of Mr. John Bradshaw until the 14th November, when Mr. Fortey returned. In March, Government decided that Mr. Caldwell should take his pension from the 8th February, but no permanent successor has been yet appointed.

Changes in the limits of the Inspectors' divisions.

3. In my last Report I pointed out that some change ought to be made in the distribution of the districts which constitute the six divisions under the Inspectors of Schools. Accordingly in March last I submitted proposals for increasing the area of the 6th Division by adding Coimbatore to it, and for reducing the size of the 1st Division by transferring the Kistna district to the 2nd Division, Nellore to the 3rd Division, South Arcot to the 4th Division, and Tanjore to the 5th Division. I also recommended that the Inspector of the 4th Division should have charge of the Normal Schools of Vellore and Trichinopoly, both of which are in his Division. These arrangements were sanctioned just before the close of the year, but as they were not carried out during the year, they do not affect this report.

Deputy Inspectors.

4. The number of Deputy Inspectors at the close of the year was the same as last year, viz. 37. The number sanctioned is 38, but one appointment in the Bellary district has never been filled up. Great difficulty has been experienced with regard to the examination of Mahomedan Schools, in which Hindustani and Persian are studied, owing to the Inspectors and Deputy Inspectors being as a general rule unacquainted with either of these languages. In 1875 Government authorized the Local Fund Boards and Municipalities to appoint local Examiners and to remunerate them by fees, which were to be afterwards repaid from Provincial Funds. This system has not worked well, as the Boards have great difficulty in finding competent Examiners and the fees and travelling expenses of the persons appointed form a not inconsiderable item of expenditure. During the course of the year a case occurred in which a heavy bill had to be paid for a series of examinations which were manifestly untrustworthy. I accordingly recommended that a special Deputy Inspector should be appointed to travel over the whole Presidency and report on such Mahomedan Schools as are under inspection. This was sanctioned as an experiment for twelve months, but as the Mahomedan Deputy Inspector was not appointed until after the close of the year, the result of this measure will be noticed in my next report. The number of Deputy Inspectors was increased from 19 to 38 in 1872, but there has been an immense development of elementary education during the last five years, and some of these officers are scarcely able to cope with the work which has now to be got through. The usual sketch of the work done by the Deputy Inspectors, as well as by the Inspectors, will be found in the Appendix. One Deputy Inspector was dismissed during the year for sending in false reports and travelling bills, and another Deputy Inspector who was removed by Mr. Powell on charges of corruption in 1874 was reinstated during the course of this year by order of Government after a magisterial investigation.

Inspecting Schoolmasters.

Districts.	1875-76	1876-77
Ganjam	4	5
Vizagapatam	4	4
Godavery	6	9
Kistna	6	7
Bellary	10	12
Cuddapah	6	6
Kurnool	4	8
Nellore	8	7
Madras	3	3
Chingleput	6	6
South Arcot	9	9
North Arcot	8	8
Salem	5	6
Trichinopoly	3	6
Tanjore	5	6
Madura	6	9
Tinnevelly	2	2
Coimbatore	5	5
Nilgiris	1	1
Malabar	10	14
South Canara...	4	4
Total. .	115	137

5. The number of Inspecting Schoolmasters has increased from 115 to 137, but two of the newly appointed men in the Madura district did not join until March, and ranges were not assigned to them until the beginning of the current official year. The Inspecting Schoolmaster of the Bhadrachellum and Rekapully Taluqs is paid from Provincial Funds, and seven Inspecting Schoolmasters are Municipal Officers, viz., three at Madras, one at Trichinopoly, one at Calicut, one at Nellore, and one at Mangalore. The rest are all under the Local Fund Boards. The Superintendent of Hill Schools in the Ganjam district is paid from Provincial Funds and is under the orders of the Special Assistant Agent in Ganjam.

II.—University.

Changes in Bye-laws.

6. At the request of Government I brought before the Syndicate the question of making the University more self-supporting. Certain changes have accordingly been made, the general result of which will be to effect a saving of about Rupees 6,680 per annum Hitherto there have been ten papers of three hours each for the Matriculation Examination. This examination has been curtailed by four hours, which have been deducted from the papers in Mathematics and Geography. The *vivâ voce* portion of the B.A. Examination has also been abolished, and the marks allotted to the several subjects have been redistributed. It has also been determined to make a slight reduction in the fees paid to the Examiners for the B.A. Degree. Another series of changes has been necessary to check an abuse which was beginning to show itself in connexion with what has been known as the general meeting of Examiners. Under Bye-law 43 the Matriculation Examiners have hitherto held a meeting at which each Examiner was required to submit his papers, and also the value which he intended to assign to each question, and, in the event of a difference of opinion, the decision of the majority of the Examiners present prevailed. There were similar Bye-laws for the F.A. and B.A Examinations. For the M.A. Examination the rule was different, as although a meeting was held at which each Examiner was required to submit his papers to his colleagues for remarks and

suggestions, the adoption of them was to be left to his own discretion. This latter rule seems *primâ facie* a better one than the former, under which a paper prepared by an Examiner selected for his special knowledge of the subject may be altered by gentlemen selected for their knowledge of some entirely different subject. A good Sanscrit or Tamil scholar is not necessarily a competent judge of a Mathematical paper, or a Mathematician of a paper in Chemistry. Certain gentlemen appear to consider that the standard of some of the University Examinations is too high, and this year a determined and successful attempt was made to lower the standard of the Matriculation Examination with the aid of the Bye-law above referred to. Similar attempts might have been made to lower the standard of the F.A. and B.A. Examinations. Bye-laws 43, 58 and 73 have therefore been modified, and as they now stand they prescribe that at the Matriculation, F.A., and B.A. Examinations each Examiner shall submit his paper together with the marks he intends to assign to each question to his colleagues in the same subject for remarks and suggestions, but that the adoption of them shall be left to the Examiner's own discretion. The general meeting of Examiners has thus been abolished. The only other change which remains to be noticed is one in Bye-law 95, which prescribes that candidates for the degree of Bachelor of Laws must attend certain courses of lectures for two consecutive years. A degree in Arts is necessary as a qualification for a degree in Law, but as the rule has hitherto stood, it was contended that a student might be attending law lectures while engaged in studying for his degree. This was never intended and the words "subsequent to graduation" have been inserted to prevent this objectionable course being resorted to.

Results of the University Examinations from 1857 to 1877.

7. The results of the University Examinations from its establishment to the close of the last official year are given in the annexed table.

Remarks.

Besides the results entered in this table, three candidates obtained the degree of Doctor of Medicine—one in 1856-59, another in 1870-71, and a third in 1872-73. Two candidates passed in 1868-69, one in 1872-73, and three in 1873-74 for the degree of Bachelor of Medicine and Master of Surgery, also one secured a License in Medicine and Surgery in 1867 68. Two candidates passed in 1874, three in 1875, and two in 1876 for the Preliminary Scientific Examination in Medicine. One passed the first M B and C.M Examination in 1876

The degree of Master of Arts was obtained by one candidate in 1869, by five in 1870, by one in each of the years 1872, 1873, 1874, 1875, 1876, and by three in 1877 All the candidates, save 6, were ex-students of the Presidency College Of the six exceptions, one was a Bachelor of Arts of the University of Bombay, one was a private student, and the others were ex-students of the Combaconum Provincial College, Sullivan's Gardens Seminary, Trivandrum College, and the Free Church Mission Institution

The degree of Master of Laws has been conferred on three candidates—one in 1870, another in 1871, and the third in 1874

8. It will be seen from the table given in the margin that there has been a somewhat large increase in the number of candidates who came up for the Matriculation Examination and an enormous increase in the number and proportion of men who passed. The number of first class men shows also an immense rise. Unfortunately these apparently favorable results cannot be relied on as indications of real progress. As already mentioned the standard of the examination has been improperly lowered and many pupils have passed who would have had no chance of passing in any other year. Omitting two candidates whose examination was disallowed, only 1,217 failed. The analysis of failures given in the margin shows that the test in English must have been very much easier than it was last year, and that the number of failures in the optional languages was less than might be reasonably expected. The optional language in which the proportion of failures was largest was Latin, and Mr. Brandt the Examiner makes the following remarks :—" By way of general remark I have to say that many of the papers are extremely indifferent, just verging on the minimum; some inexpressibly bad. The translations are mostly fairly done, especially the translations from Virgil; but in many cases I have reason to suspect that this is the result more of memory than of real knowledge of the language, for if a slip is once made, all the thread of the passage is lost and excruciating mistakes follow thick and fast. Most of the papers on Grammar show great ignorance of the elements: in very few cases indeed is there even an approximation to ability to write two or three lines of what may pass muster as Latin Prose." I mentioned last year that general knowledge now included the History of India, Geography, Physical Geography, and Physics, the two last being new subjects which had taken the place of the History of England. Mr. Porter, who was one of the Examiners in

Matriculation Examination.

General Result.		1875-76	1876-77
Examined		2,120	2,469
Passed.			
First Class.	Government institutions .	41	79
	Other schools and private study ...	27	106
Second Class.	Government institutions ...	167	258

	Total passed	662	1,250

Analysis of Failures.	1875 76	1876-77
English	1,258	778
Optional language	461	257
Mathematics	510	529
General knowledge . .	592	786
Obtaining one-third marks on the whole	38	84

Physics, makes the following remarks regarding the answers to his part of the paper :—

"The mark-book itself without the aid of any comment tells a striking enough tale. Of the 2,500 candidates there were over a thousand that got no marks at all. If I add those that sent up no papers, this number will rise to 1,141. This however must be reduced by the number of absentees, of which there are always a few. I may say therefore in round numbers that there were 1,100 candidates who showed no knowledge numerically appreciable in any of the points contained in my questions.

"The significance of this fact regarded as evidence of a low state of knowledge on this subject depends entirely on the nature of the questions. To save the Syndicate the trouble of referring to the paper, and at the same time to gain the vividness that belongs to particulars, I shall here set down one of my questions, and report with some minuteness the character of the answers and the nature of the errors. As this, however, involves some labour, I shall confine myself to the papers of the candidates examined at Madras. They are a very fair specimen of the whole, and as they come from a great variety of schools, my remarks cannot be taken as offensive to any one in particular.

"I presume no one would object on the score of difficulty to the following question which stands second on the paper :—

'State how the two points first marked on the thermometer are obtained.'

"The process required is given in Article 51 of the primer, and consists briefly in plunging the thermometer tube (after it is filled with mercury and sealed) successively in melting ice and boiling water and in each case marking on the tube the position of the top of the column of mercury. Now to this easy question (and I suppose it would be difficult to select an easier one) out of the seven hundred odd candidates in Madras only 128 gave correct answers. There remain 570 odd who either did not attempt it, or who attempted and failed. As a matter of fact, the far greater number did attempt it, and it will, I think, be a matter of interest to the Syndicate to know how in travelling so short and straight a road so many managed to go astray.

"To conceal no element of difficulty, I should mention that the primer contains two paragraphs about the thermometer, Article 50 which is a general explanation, and Article 51 which contains three distinct things, (1) how to introduce the mercury, a point of some difficulty owing to the fineness of the bore, (2) how to mark the freezing and boiling points which is the question I asked, and (3) how to mark the intermediate points by the use of wax and acid. There was first, then, the difficulty of picking out the exact part wanted. Some chose the general explanation, others preferred the wax and the acid. The most numerous class evaded the difficulty by writing out the whole, beginning with the glass blower and ending with the acid. In the latter case where the part I wanted was correctly given the answer was accepted, and all such answers are included in the 128 already mentioned. I have here incidentally touched on one of the commonest faults of students of this standing, an inability to see the

point of a question, leading to much diffuse and superfluous writing The majority of Matriculation candidates possess the property which comically enough they are so fond of ascribing to air, 'An intense desire to fill any vacant space.'

"To return to the answers. Some are amusing from their vagueness The following are specimens:—'When the weather is very cold we take one point, when the heat is increased to the highest we take the other.' 'Take it to the coldest place in the earth for the one point, take it to the warm country for the other.' 'The people near the Equator founded the one point, the people of the cold country founded the other.'

"Sometimes the boiling point is obtained by putting the tube in a 'bright excessive fire,' by 'exposing it to the rays of the sun,' by 'constant application of heat,' or by 'heating the mercury till it boils.' The freezing point by 'placing it out of the rays of the sun,' by 'constant application of cold,' by 'taking it to the top of a mountain,' or by 'cooling the mercury till it freezes.' Another class effect the task with less trouble in some of the following ways:—'Mark one point at the bottom and another at the top,' 'coat the tube with wax and draw marks with the needle at proper places and then plunge in hydrofluoric acid,' 'take a glass tube and scratch with a needle a line at 100 steps, &c.,' wax and acid as before. I notice that boys who use no ceremony in scratching the marks are always very strict about the acid. Some indeed leave the whole work to the acid as thus—'If you dip the thermometer in a solution of hydrogen gas, you will obtain the first two points.' The wildest answer I received was the following, to which I see no clue in any words of the primer:—'The two points are obtained by Sir Stamford Raleigh when he was in Ireland.'

"The mistakes that ran through the main part of the answers, though not so ludicrous, were in reality quite as bad when it is recollected that the object is to have two temperatures which shall be the same for all thermometers The commonest of all was to plunge the tube in ice instead of melting ice, as if ice had not, like other bodies, a wide range of temperature. Sometimes instead of ice they substitute 'cold water' or 'some other cold substance.' Instead of boiling water they put 'hot water' or 'intensive hot water,' varying the adjective according to the taste of the writer. One or other of these latter mistakes occurs in about four hundred of the Madras papers. This fact is to my mind conclusive proof of something defective in the teaching of the subject. If it had ever been insisted on with any emphasis that it is not ice but melting ice that has a fixed temperature, so many persons would hardly have made so absurd a blunder. To plunge the tube in ice for the purpose of getting a fixed temperature is not much better than taking it to a cold country, or putting a mark at the bottom, or finally dipping it in hydrogen gas. I think it is a serious thing to have to report that nearly two-thirds of all the candidates examined at Madras should have written out this simple question, going through all the plunging and marking, and have omitted nothing—except the point.

"Some small part of the failure is probably due to ignorance of English. Even separate words are often misunderstood. The article I have quoted speaks of pounded ice. This is often changed into 'a pound of ice.' Again,

a great number show plainly enough that they take 'pounded' to mean the same thing as 'melted.'

"In the same article of the primer, the author says, 'Get a glass blower to blow a hollow bulb at the end of a tube of glass, &c.' This is very frequently changed as follows:—'Take a glass tube, then take a glass blower, &c.' And when they have taken him they treat him in a way that shows clearly enough they do not regard him as belonging to the animal kingdom. They pour mercury into him, heat him over a flame, fill him with mercury vapours, and finally hermetically seal his open end! Others cover him with wax, prick him with pins, and plunge him in various acids. One youth dips him in sulphuric acid, and then (as he very justly remarks) 'it will have clear marks upon it, the acid having such a tendency.'

"The chief cause of the failure is I think a too ambitious style of teaching. And this arises from an insufficient sense of the difficulty boys of this standing have in taking in and really assimilating new physical ideas. A young B.A., fresh from his Dynamics and Hydrostatics, has great difficulty in confining himself to the primer. Not many days ago I asked an old pupil of mine, now a teacher in another part of the country, how he got on with the teaching of Physics. 'Oh very well,' said he, 'I prepared the boys well for the primer by teaching them all about the composition of forces and the nature of a resultant.' Now this I believe is what takes place all through the book. Under the head of Centre of Gravity the teacher introduces a variety of propositions which the author deliberately excluded as unsuitable. Under Specific Gravity, a class of problems is given of precisely the same character as are found in books on Hydrostatics used for B.A."

The following list shows the number of institutions which succeeded in passing pupils for this examination during the last two years. There is an unusually large number of pupils who have come up with the aid of private study. Certain ex-normal students appear to have improperly described themselves as having passed from the Normal Schools of Mangalore, Trichinopoly, and Vizagapatam, which have no Matriculation classes, and from the Normal School of Cannanore, which was abolished some years ago, and as they have been gazetted accordingly, they are credited to these schools in the following list, but they should really come under the head of private students:—

The analysis in the margin shows that there was a great increase in the number of failures in English, History, and the optional subject. In History the standard during the last three years seems to have been pitched too low. Mr. Brandt remarks that the Latin papers are decidedly more satisfactory than those for Matriculation, but that the papers from Madras are inferior to those from Tanjore and Bangalore. Of the Arithmetic, Mr. Metcalfe says:—"In some respects the paper was more satisfactorily done than last year's, perhaps it might be a little easier; but in a very large number of cases the work sent up was still very discreditable. How is it that from one end of the Presidency to the other the boys uniformly avoid the use of decimals? Every number, abstract or concrete, is reduced to the form of a vulgar fraction. I enclose a few sheets taken almost at random from the Madras packet. Just observe * * * how almost every candidate attempted the 5th question* in Compound Interest by Vulgar Fractions. One boy used up 550 figures over it and then left it; another, you will see, remarks that it took him 1½ hours to discover that the answer would be *something*. Moreover, they do not appear to know what kind of working they should enter in their books. Sometimes you see a boy dividing by 7 by long division * * *. I fancy the subject is neglected and they trust to the Euclid and Algebra to pull them through."

B.A. Examination.

10. The number of candidates who appeared for the B.A. degree rose from 105 to 129, but the number of passed men was only 70 against 67 last year. The analysis in the margin shows an increase of failures in every subject, and in several subjects the increase is considerable. Of the candidates who passed this year, 10 brought up Sanscrit and 2 Latin as their optional language. The others all passed in various vernacular languages and must therefore be regarded as standing on a somewhat lower level of culture. The following extract from Mr. Brandt's report shows the quality of the highest classical teaching in this Presidency :—

Analysis of Failures.	1875-76.	1876-77.
English	27	32
Optional language...	5	9
Mathematics	24	31
History	5	18
Mental Philosophy	13	27
Optional subject...	15	35
Obtaining one-third marks on the whole.	...	1

"I have been somewhat disappointed in these papers : they do not show the advance relatively to the papers of the F.A. candidates, which I think might have been looked for.

"Of the six papers now examined, two only can be called even fairly good, and for these I could not assign more than a fraction over half marks. The translations have been in most cases fairly done, and that is about all I can say. The best of the translations from English into Latin would not do credit to a fifth form boy in an English public school; and I think there is no better test than this—Latin Prose—for ascertaining a student's knowledge of the construction, idiom, and grammar of a language. In the answers to *questions* on these matters, a candidate can evade or leave it in doubt what he knows and understands, and what he does not—not so in rendering a passage into Latin."

The following list compares the results of the B.A. examination during the last two years :—

Name of Institution.	1875-76.			1876-77.		
	First Class.	Second Class.	Third Class.	First Class.	Second Class.	Third Class.

14. The result of the examination for the degree of Bachelor of Civil Engineering is shown in the margin. The successful candidates all came from the Civil Engineering College.

Results of examinations in optional languages.

15. The results of the University examinations in the optional languages selected by the candidates are shown in the following tables, but it must be remembered that many of the candidates who passed in these languages failed in other subjects. The proportion of failures in most of the vernacular languages is always so small as to suggest some doubts as to the examinations being of the general standard of difficulty required in other subjects. This year this remark applies also to Sanscrit, in which the percentage of passed candidates is enormous.

Classes of the community represented at the University Examinations.

16. The following tables show the extent to which the several classes of the community are represented among the successful candidates of the last two years. In the Matriculation examination the advance is most marked among Mahomedans and least marked among East Indians. The severity of the F.A. examin-

ation has affected the results in all classes except Europeans and Mahomedans, but here again the East Indians have gone back the most. In the B.A. examination, non-Brahmin Hindus show the largest advance, while East Indians alone show a great falling off.

Classes of Community.	Matriculation.		First Arts.		B.A. Degree.	
	1875-76.	1876-77.	1875-76.	1876-77.	1875-76.	1876-77.

				Deduct Receipts...	39,226	12	0
				Balance against the University	11,535	1	9

III.—Arts Colleges.

Presidency College.

7 Professors.
1 Assistant Professor.
6 English Masters.
9 Moonshees.

18. Mr. Thompson, Principal of the Presidency College, went to England on leave on the 16th March 1877, and was succeeded by Mr. Porter. Mr. Bilderbeck, who had acted as Professor of History for nearly two years, was transferred in January to the Provincial School of Rajahmundry, and was succeeded first by Mr. Gopal Row, and afterwards by Mr. Runganadha Moodelliar. There have also been some changes in the junior department.

The following statement shows the strength of the different departments at the close of the last three years, the number of students who went up for the University examinations, and the result of each examination :—

Years.	31st March.			Examined			Passed.						
							Matriculation.		F.A.		B.A.		
	College.	Upper School	Middle School.	Matriculation.	F.A.	B.A.	First Class.	Second Class.	First Class.	Second Class.	First Class.	Second Class.	Third Class.

1876-77	154	142	72	58	38	35	7	40	7	13		15	15

The attendance, although not quite so high as it was last year, is nearly as large as is desirable, the average strength of the ten classes of which the institution is composed being above 36. The College has never distinguished itself so much in the University examinations as it has done this year. In the B.A. examination it stands far above all the other Colleges, and, although no first class was attained, the general excellence of the work done is attested by the fact that only five out of 35 candidates failed to pass. Seven of the graduates who passed this year took up Physical Science as their optional subject. In the F.A. examination, the Presidency College stands below the Provincial College of Combaconum and the Central Institution of the Free Church of Scotland, but it has maintained its position in a year in which most institutions have gone back. In the Matriculation examination, the number of successful candidates is unusually large, but it must be remembered that the standard was lower than usual.

The table in the margin shows the number of pupils from different districts during the last three years. Four districts are wholly unrepresented, and several mofussil districts are not so well represented as usual. The Mahomedan element remains nearly stationary, there being 4 Mahomedans in the College, 16 in the Upper School, and 5 in the Middle School. It is a satisfactory circumstance that Persian has now entirely displaced Hindustani in the Upper and Middle Schools, but in the College there is only one student reading Persian.

The Laboratory was not quite finished at the end of the year.

Two annual prizes have been instituted during the year in connection with the Presidency College. One is a prize for English Composition, called the Arbuthnot prize, founded in honor of Sir Alexander Arbuthnot, K.C.S.I. The other, which is for History, has been instituted in honor of Mr. Gordon, who filled for many years the chair of History.

Mr. Porter makes the following interesting remarks on a subject regarding which there is a good deal of misapprehension :—

"The increasing number of B.A's. is not regarded by some with unmixed pleasure. There are indeed not a few who regard it with utter disfavour and think it will end in disappointment to the young men themselves and as a consequence in political dissatisfaction. Meanwhile if we enquire of those who are most concerned whether they regard themselves as disappointed, we shall find the answer in this striking fact, that in three Colleges of this Presidency, omitting all the smaller Collegiate institutions, there are at the present moment 600 students reading for the higher examinations, a very marked increase on any previous year, and the confidence thus shown appears to be abundantly justified by the career of former graduates. It occurred to me while writing this report to bring the question of success in life to the test of fact by taking the University calendar and tracing the fortunes of the B.A's. who graduated some years back. I will now state the results, which are not so complete as they might have been if I had had longer time, but which I believe are correct so far as they go. I begin with a set of students I happen to know particularly well, those who took their degrees the year I first acted in this College, now exactly ten years ago. Of the thirteen that passed in that year there are two I have been unable to trace in the short time at my disposal. Three became Vakeels, the rest entered Government Service; and every one now holds an office of responsibility. There is not one of the number with a salary below Rupees 200. In the following year, only five appear to have entered Government Service, the rest having become Vakeels or taken to other pursuits. Of these five there is only one with a salary below Rupees 150, and the average of their salaries is Rupees 200. In the next year, which is the last I shall mention, there were no fewer than 40 graduates. Of these five are no longer living, four are unknown to me, eight are Vakeels, and the remaining 23 have fixed salaries mostly in the Government Service. Of these 23 about one-third have salaries of Rupees 200 and upwards, another third of Rupees 150 and upwards, and only two are below 100. The progress is of course less as the interval from the time of taking the degree is shorter. There is obviously nothing here for regret or discouragement. On the contrary, there is an average of success which speaks strongly of the intelligence and energy of the graduates of the University of Madras."

Provincial College, Combaconum.
1. Principal.
3. Assistants.
6. English Masters.
4. Pundits.

19. Mr. Porter was transferred, as already stated, from the Provincial College of Combaconum to the Presidency College in the middle of March 1877 and was succeeded by Mr. Gopal Row. Mr. Gopal Row acted as

Inspector of Schools, 4th Division, from the 26th April to the 26th December, during which period Mr. C. Sundara Row, Mr. V. Srinivasaiyar, and Mr. N. Vaidianatha Aiyar acted as First, Second, and Third Assistants in the College Department. Some changes also took place in the School Department. Of these the most important was the abolition, owing to the crowded state of the institution, of one of the three divisions of the fourth class which was no longer required, a new division of this class having been formed in the Town School.

The following statement shows that the number in the College Department has risen from 165 to 200. The B.A. classes are still rather small, containing 22 and 13 students each, while the F.A. classes contain respectively 74 and 91 pupils. The average strength of the school classes is 49. In the University examinations this institution occupied a very distinguished place, especially in the Matriculation examination. There were, as was the case generally this year, a good many failures in the F.A. examination, but those candidates who succeeded secured very good places, and a Combaconum student headed the list. Only one candidate failed in the B.A. examination, and not one was placed in the third class. Of the 200 students in the College, 153 belong to Tanjore, 20 to Madura, 9 to Coimbatore, 7 to Trichinopoly, 6 to Tinnevelly, 4 to South Arcot, and 1 to North Arcot.—

Provincial School, Rajahmundry.

20. In my last report I endeavoured to show that a College was urgently needed in the Northern Circars. With the sanction of Government a Preparatory B.A. Class was opened in the Provincial School at Rajahmundry after the Christmas vacation, and Mr. Bilderbeck, Acting Professor of History in the Presidency College, was sent up to Rajahmundry as an Assistant to Mr. Metcalfe. As it was considered desirable that the inhabitants, and more especially the Zemindars of the Northern Districts, should be called on to contribute towards the expense of raising this school to the status of a College, the Collectors were requested to ascertain and report what sums were likely to be

forthcoming. The result as yet has not been very encouraging. The donations paid or promised do not amount to Rupees 5,000. Some small annual subscriptions have been promised and two scholarships have been founded. In all other respects there seems every prospect of success. The number in the College Department has already risen from 18 to 51, distributed as shown in the margin. In the Matriculation examination, 31 out of 36 boys passed. In the F.A. examination, only 6 passed out of 16, but the majority failed in English only. At the Comparative examination this school did very well, and passed 47 pupils, being a larger number than any other school. The majority of the pupils of the fifth and lower fourth classes passed a fairly creditable examination at Mr. Kershaw's inspection.

1875-76	18	91	125	26	8	1	11	2	4
1876-77	51	115	108	36	16	3	28	...	6

The financial condition of this institution is very satisfactory. The upper and middle departments taken together are now more than self-supporting.

Free Church Institution and Madras Christian College.

21. Some important changes have been made in the constitution of the Central Institution of the Free Church of Scotland. The College which is "to be regarded as now representing more or less directly all the Churches of the Reformation, will be henceforth known as the Free Church Institution and Madras Christian College." "The Church Missionary Society and the Wesleyan Methodist Missionary Society have agreed to give pecuniary help to the institution," and "the funds available are expected to secure as a minimum staff for the Collegiate Department five Professors, with two Assistant Professors, and such Pundits as may be from time to time required." The ideal aimed at is "that of a College separate from any school department and not dependent on any one Church or Missionary Society."

The College has sustained a great loss in the death of Mr. Ross, the Mathematical Professor, in whose memory an annual prize for Natural Philosophy has been founded. He has been succeeded by Mr. Michie Smith, B. Sc. Another new Professor, the Revd. R. N. Macdonald, has also entered on his duties; the Revd. G. M. Rae has returned from England; and the services for a portion of his time of the Revd. G. Patterson, of the Wesleyan Mission, have been secured; while Mr. C. Subbarama Aiya, M A., has been appointed an additional Assistant Professor. Under these arrangements, Mr. Stevenson is no longer connected with the College as a Professor.

The following statement shows the great development of this institution, and especially of the College Department, during the year. In the Matriculation examination the results are surpassed only by the Provincial College of Combaconum, which however is very much ahead. In the F.A. examination the number of successful candidates is nearly as large as last year, notwithstanding the severity of the examination, but the proportion of failures was, as might be expected, much larger than usual. In the B.A. examination the College has never done so well, and although it still stands far below the Presidency College, it has had the honor of passing the only man who took a first class this year :—

Years.	31st March.				Examined.			Passed.

Mr. Fowler examined the School Department in March. The result of his inspection in certain subjects and classes was very satisfactory, while in others there were some failures.

Doveton Protestant College.

22. It will be seen from the following statement that there has been a serious falling off in the attendance of the Doveton Protestant College, due probably in some measure to the opening of St. Andrew's School. In the University examinations the results cannot be regarded as satisfactory.

Years.	31st March.				Examined.			Passed.						
								Matriculation.		F.A.		B.A.		
	College.	Upper School.	Middle School.	Lower School.	Matriculation	F.A.	B.A.	First Class.	Second Class.	First Class.	Second Class.	First Class.	Second Class.	Third Class.

1876-77 ...	20	29	34	56	22	9	4	...	8	...	2	...	...	...

Mr. Fowler inspected the institution in March, and his report showed that much of the instruction imparted in the school was of a very unsound character. The attention of the Committee was drawn to this report. In reply they attributed the unsatisfactory state of the school classes to want of proper supervision, and stated that they proposed relieving the Principal of a part of his work in the College by permanently employing a native graduate to teach Mathematics. It was hoped that in this way Mr. Thom, or his successor, would be able to find time to supervise the lower classes. It is now known that Mr. Thom, who went to England upwards of a year ago, will not return to India. During his absence, Mr. Bindon has officiated as Principal.

Sullivan's Gardens Seminary.

23. The Seminary at Sullivan's Gardens is a small theological institution from which two or three young men generally matriculate every year and occasionally appear for the higher examinations. Mr. Fowler has not inspected the institution for three years, and it has been hitherto ranked as a higher-class school. The returns however show that the lowest class is a Matriculation class, and that the institution is in reality a small college. In 1874-75 two students matriculated from this seminary and were placed in the second class. In 1875-76 exactly the same result was produced. This year two pupils went up for the F. A. examination, one of whom was placed in the second class, and five for the Matriculation examination, of whom four passed, all in the second class. All the students of this institution learn Greek, and two also read Latin.

B.A. Class	1

1876-77	68	124	250	144	62	15	4	6	39	2	3	.		..

The institution, it will be observed, did exceedingly well in the Matriculation examination and fairly in the F.A. examination, but failed in the B.A. examination.

IV.—Collegiate Schools.

General comparison of Collegiate Schools.

25. The Provincial school of Rajahmundry has been transferred to the list of Colleges and the Sumasthanum High School, Vizianagram, has become a Collegiate School. Thus the number of Collegiate Schools remains unaltered. It will be seen from the following table that the attendance in these eight schools has on the whole increased, especially in the College Department, but that there has been some falling off in the Upper School Department. The number of pupils who matriculated has risen from 132 to 199, of whom 33 were placed in the first class against 14 last year. On the other hand, the number of First Arts men has fallen from 34 to 19, of whom however 6 passed in the first class against 3 last year:—

26. The attendance in the Provincial School of Bellary again shows a very serious falling off. This school acquitted itself fairly in the University examinations. Five out of eight candidates passed the First Examination in Arts, all in the second class, and 14 out of 19 passed the Matriculation examination, all likewise in the second class. The upper fourth class is still in a deplorable state and stood last in the Comparative examination of Provincial and Zillah Schools. The work of the fifth and lower fourth classes was tested by a divisional Comparative examination instituted by Mr. Bradshaw. In this examination the fifth class did not occupy the position which it should have done, and the lower fourth class failed disgracefully. The third class was examined *vivâ voce* by Mr. Fortey, who found that the 12 boys which it contained were quite unfit for the class into which they had been admitted. This class has been greatly injured by the recent institution of a third class in the neighbouring Municipal School, which was intended to serve as a feeder to the Provincial School, but which has now become a rival. Mr Fortey remarks also that the Wardlaw Institution and the London Mission School "have for some time past been each a source of weakness to the other, as pupils have migrated from one to the other whenever their desire for promotion has not been gratified, and consequently there are in both schools pupils in higher classes than those for which they are fit." As both the Headmasters have now signed a set of rules which will put a stop to this irregular migration of pupils, I trust that the standard of the school classes will gradually rise. Mr. Thomas has succeeded Mr. Runganadham Moodelliar as Acting Headmaster of this school.

Provincial School, Bellary.

27. There has been a very considerable increase in the attendance of the Provincial School of Calicut. This school did not do well in the First Arts examination. The First Arts class this year was a very poor one, and only two out of 13 candidates passed, one in the first class. In the Matriculation examination, 39 out of 55 pupils passed, 6 in the first class. As the lowest class in this school is the upper fourth, the whole of the middle department is tested by the Comparative examination of Provincial and Zillah Schools. Forty-seven pupils went up for this examination and the result was on the whole fairly satisfactory. There has again been no regular inspection of the school this year. Mr Garthwaite states, however, that he examined the fifth class in October, and that it "did better than the corresponding class in former years, although much still remained to be done." This school has greatly improved since it came some years ago under the charge of Mr Barrow. Owing, however, to grave irregularities in connection with the transmission of school fees to the Treasury, and to other circumstances, Mr. Barrow's connection with this school has come to an

Provincial School, Calicut.

end. No successor has been appointed, but the school is at present under the charge of Mr. S. Seshayya.

Provincial School, Mangalore.

28. The attendance in the Provincial School of Mangalore has also increased, but the increase is mainly due to the formation of an additional section of the lower fourth class. This school has been again unsuccessful in the First Arts examination, only four having passed out of seventeen. One of these was however placed in the first class. In the Matriculation examination 26 out of 47 passed, six being placed in the first class. This school did very well in the Comparative examination. The fifth and lower fourth classes were examined by Mr. Garthwaite in October, and the general result was satisfactory. Mr. Moss, the Headmaster, went on leave to England in November, and Mr. Burroughs succeeded him in the charge of the school.

Noble High School, Masulipatam.

29. There is a very satisfactory increase in the attendance of the Noble High School, Masulipatam. Of four pupils who went in for the First Arts examination, three passed, one in the first class; and sixteen out of nineteen passed the Matriculation examination, three being placed in the first class. Mr. Kershaw, who inspected the institution in August, made the following remarks :—

"The general results are not so satisfactory as I had expected them to be. The English in all its branches of Reading, Grammar, Spelling, Composition, and Translation wants more careful teaching on the part of the junior masters. Also the Arithmetic wants more careful and intelligent teaching. There was much slovenly workmanship shown me. Boys from the fifth class down to the lowest divided by 2 and 5 and such small numbers by long division.

"This school for the cleanliness, neatness, and convenience of its hall and class rooms, for the excellence and completeness of its furniture, apparatus, and appliances, and for the perfect order and discipline maintained throughout is a model institution. It is the best found school that I have seen in India. The copy writing is very fair indeed. I may add in conclusion that I noticed in the compound two Badminton Courts marked out and I found that the senior boys turn out every evening after school for a game, which they seem to enter into with considerable spirit; on certain evenings, Mr. Sharp and other European gentlemen of the station join them."

The staff is very weak for a school of this grade, but Mr. Sharp is endeavouring to strengthen it as opportunities occur. The F.A. class, which last year contained four students, this year contains nine, and Mr. Kershaw thinks that there is every probability of this important institution developing in course of time into a College.

S. P. G. High School, Trichinopoly.

30. The S. P. G. High School, Trichinopoly, has increased in numbers, although the upper school has somewhat fallen off. Mr. Gopal Row inspected the institution in October and reported that the

result of his examination, which was as usual confined to classes not tested by the University examinations, was generally fair, except in English and Mathematics. Twelve pupils went up for the F.A. examination and four passed, two in the first class. In the Matriculation examination this school surpassed every institution in this Presidency except the Provincial College of Combaconum. Out of 56 pupils, 51 passed, and 11 were placed in the first class.

St. Joseph's College, Negapatam.

31. St. Joseph's College, Negapatam, was not inspected. The table given above shows that the attendance has increased a little, and that the College Department is not quite so weak as it was. Of three pupils who went up for the F.A. examination, one passed in the first class, while in the Matriculation examination 14 out of 21 passed, one in the first class.

High School, Coimbatore

32. The attendance in the Coimbatore High School is nearly the same as it was, but the College Department now contains a Senior as well as a Junior F.A. class. Mr. Marden found the institution in a very satisfactory state when he visited it in June, and 29 out of 31 pupils passed the Matriculation examination, five in the first class.

Samasthanum High School, Vizianagram.

33. The decrease in the attendance of the Samasthanum High School, Vizianagram, is partly owing to the fact that the third class, which contained 66 boys, has been transferred to the Branch School. A Preparatory First Arts class containing 8 students has now been opened. This institution passed a fairly creditable examination when it was inspected by Mr. Kershaw in June, and at the Matriculation examination ten out of eleven candidates passed.

V.—Higher-class Schools.

Higher Class Schools, Division.

34. There were eight Higher-class Schools in the 1st Division last year. The Samasthanum High School, Vizianagrum has been transferred, as already mentioned, to the list of Collegiate Schools. On the other hand a grant-in-aid has been given to the American Mission School, Guntoor, and the Church Mission and Hindu Schools at Bezwada have been transferred from the middle to the higher class. There are thus ten schools of the higher class. The following statement compares the attendance in these institutions during the last two years and shows the number of pupils who matriculated from each school:—

American Mission School, Guntoor...	No returns.				27	34	36	97	8	...	1	...	5
Total ..	247	717	595	1,559	269	740	585	1,594	85	2	39	3	47

There is apparently a small increase in the attendance, but this is because the American Mission School at Guntoor, being an unaided school, furnished no returns last year. The number of passed candidates has risen from 41 to 50, which is not a great advance, considering the low standard of the examination held this year.

The Zillah School of Berhampore has suffered from dissensions among the Masters, and Mr. Kenny complains of a great falling off in the supply of boys from Taluq Schools and notably from the Onslow Institution, which has been entirely closed for some time. The upper fourth class again acquitted itself badly at the Comparative examination. The general result of Mr. Metcalfe's inspection in February was satisfactory with regard to the Telugu classes and poor with regard to the Ooriya classes. No less than 20 boys went up for the Matriculation examination and 13 passed, one in the first class. This school has been recently strengthened by the appointment of two graduates as Second and Third Masters, and a great difference in the style of the work is expected in consequence.

Mr. Kershaw visited the London Mission School of Vizagapatam in July 1876, and his report was on the whole tolerably favorable, but there had been some decrease in the strength of the classes, the quantity of work brought up was rather small, and the results in Arithmetic still continued unsatisfactory. At the Matriculation examination, 6 out of 9 passed against 11 in the previous year. The regular staff of Masters is poor for a school of this grade, but Messrs. Hay and Jagganadham continue to devote some time to this school.

The Hindu School, Vizagapatam, has hitherto been a very inefficient school of its class, mainly owing to the inferior attainments of the majority of the teachers. This year, owing to a graduate having been appointed Headmaster, some improvement has taken place. Six pupils matriculated against two last year, and the general result of Mr. Kershaw's inspection was rather more satisfactory than usual.

Both the Mission and the Hindu School at Vizagapatam used to have a Mahomedan department, but this department has been abolished this year in both schools after what Mr. Kershaw describes as "years of vain struggle on the part of the managers against the indifference of the Mahomedan population and the dulness of Mahomedan students." The decline in the attendance is mainly due to this cause.

The Hindu School of Cocanada passed a creditable examination at the annual inspection, and the Arithmetic of the upper fourth class was described by Mr Kershaw as the best he had ever seen since he had been an Inspector. The attendance has also improved considerably. It will be observed however that only 4 pupils out of 9 succeeded in the Matriculation examination.

The attendance in the Church Mission School of Ellore again shows a satisfactory advance. The general results of the annual

inspection were "pretty fair with some rather serious exceptions. The Mathematics of the 5th and 4th classes was particularly bad as regards the execution and not generally satisfactory otherwise" Three out of six pupils passed the Matriculation examination, which is an advance on last year, when only one out of eight succeeded.

When Mr. Kershaw inspected the Central School of Nursapore, it had to some extent recovered, as regards numbers, from the depressed state to which it had been reduced, but the result of his inspection was far from satisfactory, mainly owing, he thought, to the youth of the new Headmaster and Second Master. Only two boys were sent up to the Matriculation examination and both failed. The Second Master of the Zillah School of Berhampore has been since placed in charge of the Central School, but the attendance has fallen off.

Mr. Kershaw found when he inspected the Church Mission School of Bezwada that a fifth class was in existence, and that the Matriculation subjects had been introduced not only into this class but also into the class below. As the staff of masters was very weak, much of the work done was of a very unsound character. Three boys were sent in for the Matriculation examination and one passed.

The Hindu School at Bezwada is conducted by two matriculated masters and four teachers of still lower qualifications. Here also Mr. Kershaw found a fifth class reading some of the Matriculation subjects. The result of his inspection was on the whole satisfactory, but he observes that the school "would produce better results and prove a far more useful school if the Headmaster would not try to keep up a sort of make-believe Preparatory Matriculation Class."

The Hindu School of Masulipatam did not do as well as usual at the annual inspection, a result which Mr. Kershaw ascribed to the low grade of most of the Assistant Masters. The managers applied to me last year to secure them the services of a graduate, but no Telugu graduate was available. A graduate has been since appointed. This school did very well at the Matriculation examination, 12 out of 19 candidates having passed.

The American Mission School, Guntoor, was inspected for the first time in September. The classification was found very defective and the result of the examination was not satisfactory. Five out of eight pupils succeeded however in the Matriculation examination against one last year.

Higher class Schools, 2nd Division.

35. There has been no increase in the number of Higher-class Schools in the 2nd Division, and the attendance has to some extent fallen off, but the number of pupils who matriculated has risen from 24 to 42, and of these 5 are in the first class. The fifth and lower fourth classes of these schools were subjected to a comparative divisional examination instituted by Mr. Bradshaw, but conducted by masters appointed by him.

The Wardlaw Institution is in a less satisfactory condition than it was last year Only 8 pupils matriculated against 14 last year. The fifth class stood highest in the general average at the divisional examination, but last but one in general English, which was the most important paper. Mr. Haines had not divided his fourth class into an upper and lower fourth, and all the pupils took up the papers set for the lower fourth class, but even with this advantage the school stood last but one. The lower classes acquitted themselves fairly at Mr. Fortey's inspection.

Mr. Bradshaw inspected the Zillah School of Kurnool in September. A marked improvement had taken place in English reading and pronunciation in every class except the fifth, which was composed of unpromising materials, most of the pupils being young men instead of boys. In the Matriculation examination, 7 out of 9 boys passed against two last year. The upper fourth class occupied a high position in the Comparative examination of Provincial and Zillah Schools, but there was some doubt how far this result could be relied on, as copying undoubtedly took place in the divisional examination, which was held under the same superintendence about the same time.

The Zillah School of Cuddapah has improved greatly under Mr. Scott, who took charge of it in April 1876 Mr. Bradshaw, who visited the school in November, observed that its general condition contrasted most favorably with the state in which Mr. Barrow had found it twelve months previously. Five out of nine pupils matriculated against one last year, and three were placed in the first class. At the Comparative examination of Provincial and Zillah Schools the upper fourth class did far better than last year. In the divisional examination the fifth class of this school was the last on the list. On the other hand the lower fourth class did well and was decidedly good in English.

Mr. Bradshaw visited the Free Church Mission School, Nellore, in November and examined the classes *vivâ voce*. The following is an extract from his report:—

"Throughout the school, as admitted by Mr. Macmillan, a large proportion of the boys are below the standard of the class they are placed in. The effect is most injurious to themselves and the classes; and the discipline of the school suffers too, as the Headmaster must either yield to the pupils in their choice of a class or let them leave the school as they threaten to do. This is owing to the presence of the Hindu Anglo-Vernacular School which sprung into existence as a High School in a not altogether fair way, being in fact a secession of masters with pupils from the Matriculation class (as well as from all the others) from the Mission School. In it boys are admitted with little or no strictness as to entrance and monthly fees, and the spirit in which it is conducted at present is proving very injurious to the soundness of education in Nellore."

About 33 pupils went in for the Matriculation examination and 22 passed against 7 last year, two being in the first class. The fifth and lower fourth classes acquitted themselves very well in the divisional examination.

Higher-class Schools, 3rd Division.

36. Sullivan's Gardens Seminary has been transferred to the list of Colleges, and the Balura Pathasala, which now contains a Preparatory Matriculation class, has been added to the list of Higher-class Schools in the 3rd Division. The number remains therefore as it was last year, nineteen. It will be seen from the following statement that the attendance in these 19 schools shows on the whole a small falling off in all three departments, while on the other hand the number of Matriculates has risen from 92 to 210, of whom no less than 31 are in the first class against 6 last year :—

With the exception of Patcheappah's High School, Bishop Corrie's Grammar School, and the Free Church Mission School, Trivellore, all these schools were examined by Mr. Fowler during the year. He had intended to inspect Patcheappah's High School in November, but the Trustees had already made arrangements for a gymnastic fête on the day named by Mr. Fowler, and he was unable to find another day. The attendance has risen from 467 to 546, two new sections having been added to the lower fourth class. Some important changes in the financial arrangements of the institution are referred to as follows in the annual report of the Trustees :—

"For some time past the Trustees have felt, and the Director of Public Instruction has pointed out, that the cost of Patcheappah's High School was excessive. The establishment connected with the school was fixed many years ago when the institution was in its infancy, and its wants still undeveloped. In process of time as the school progressed and the necessity arose for increasing the tutorial staff, additions to its strength have from time to time been sanctioned without reference to a definite plan, and the consequence has been an expenditure, certainly not wasteful, but somewhat less economical than would have been sanctioned under other circumstances. The establishment has now been carefully and thoroughly revised with reference to the cost of similar Government and aided institutions, and the result has been an immediate and prospective reduction in the expenditure of Rupees 347 a month."

At the Matriculation examination, 43 out of 53 passed, 10 being in the first class.

The Church of Scotland Institution was visited in July, and Mr. Fowler's report was generally favorable. Twenty-two pupils out of 31 passed against 7 last year, 4 being in the first class. This school has thus recovered its former position.

At Mr. Fowler's inspection of the S. P. G. High School in Vepery, some classes acquitted themselves well and others rather indifferently. He comments on a practice which exists in this school and is becoming prevalent in other schools of allowing the boys to write their copy books at home. In the Matriculation examination, this school occupies a much higher place than it did last year, 15 pupils out of 18 having passed against four last year; of these two are in the first class.

Mr. Fowler inspected the Wesleyan Mission School, Royapettah, in March and found a marked improvement in the discipline and instruction. Thirteen out of 22 pupils passed the Matriculation examination, one in the first class, the total last year having been five.

St. Mary's Seminary was inspected in February. Here also there was some improvement, but for a school of the higher class the teaching staff was very weak, there not being a single graduate among the masters. Twelve out of 22 pupils passed the Matriculation examination, two in the first class, whereas only five passed last year.

The Hindu Proprietary School, in which there are sixty shares of Rupees 500 each, is intended for the children of persons of the wealthier classes, and the fee in the alphabet class is higher than that of the Matriculation class in any of the other aided schools. The attendance, which has never been large, has fallen off a little, especially in the upper department. The school was inspected in July and with some exceptions passed a fair examination. At the Matriculation examination 9 out of 23 passed against three last year, one being placed in the first class.

The St. Thomé Seminary was not inspected, but the attendance has increased, especially in the upper department, and a very decided advance has been made, as 8 out of 10 pupils matriculated against one last year, two being placed in the first class.

The attendance in Bishop Corrie's Grammar School has fallen from 190 to 136, and only 8 out of 18 pupils passed the Matriculation examination against 13 last year.

The London Mission School was inspected in March and was found on the whole in a satisfactory state. The classification was still imperfect, but Mr. Joss seemed fully alive to the importance of raising the standard of the classes. Some time will be necessary for the reforms which have been made in this school to produce the effect which may be expected from them. Only seven out of twelve pupils matriculated against six last year, and they were all in the second class.

The Harris School was examined in March. This school is making fair progress, and the upper and middle departments are stronger than they were. Four pupils went up for the Matriculation examination and two passed against one last year.

The Balura Pathasala, Triplicane, is at present an imperfectly developed school of the higher class, no Matriculation class having been formed yet. The staff is also weak for a school of this grade, there not being a single graduate among the Masters. Mr. Fowler inspected the school in March and was satisfied with some of the results of his examination, but there was a want of order in the school and the teaching in some of the classes was not sound.

Patchcappah's Branch School, Conjeveram, was inspected in December. The result of the examination was on the whole fair. According to the published report of the Trustees, 15 pupils went up to the Matriculation examination and 12 passed. The Inspector states that 13 went up and 11 passed, and this latter number agrees with the *Gazette*. It is a great advance on last year and reflects credit on Mr. P. V. Ramasawmi Raju, B.A., the Headmaster.

The Free Church Mission Schools at Conjeveram and Chingleput were inspected in December, and Mr. Fowler's report compares the state of the two schools. The Conjeveram School is now decidedly in advance of the other, eight out of nine pupils having matriculated in

the former, and two out of four in the latter. The report of the Mission claims one more for each school, but the above are the numbers given in the Gazette. Measures have been taken this year to "improve the organization of the Free Church Mission Schools by introducing a new and uniform scheme of studies" and by "carefully purging the classes of pupils unfit for them."

The Local Fund High School, Sydapet, was inspected in February, and the result of Mr. Fowler's examination showed that the teaching had not been very efficient. The staff is weak and does not contain a single graduate and only two First Arts men. Seven out of seventeen pupils passed the Matriculation examination and two were placed in the first class. This is a better result than has been achieved for some years.

The Free Church Mission School, Trivellore, has made a decided advance, three out of six having passed the Matriculation examination. One of these was in the first class and obtained the Government scholarship for the Chingleput district.

Mr. Fowler's inspection of Patcheappah's Branch School, Chedumbram, showed that the standard of the fifth and lower classes in several subjects was not so high as it ought to have been. Sixteen pupils went up for the Matriculation examination, and according to the *Gazette* 14 passed, two being in the first class. The Headmaster claims only 13, but states that the number would have been larger, had not some pupils who had been reading in the school for 8 or 9 years gone off to join a private school at Combaconum The gymnastic class is not so well attended as it was at first. Some of the boys met with a few trifling accidents, and have been forbidden by their parents to take part in "such dangerous exercises."

Mr. Fowler inspected the Zillah School of Cuddalore in February and was fairly satisfied with its condition. Eleven boys went up for the Matriculation examination and all passed, four being placed in the first class. This school also greatly distinguished itself in the Comparative examination of Provincial and Zillah Schools. Only eleven pupils went up, but every one passed and one was placed in the first class. Great credit is due to Mr. Sconce for the efficient state into which he has brought this institution.

Mr. Fowler's report on St. Joseph's School, Cuddalore, showed that fair progress was being made. The order of the school had improved and the answering in some subjects was satisfactory. There was, however, still much to be done, before the teaching could be pronounced sound. Seventeen pupils went up for the Matriculation examination and nine passed in the second class against four last year. An increased grant has been given to this school, in which the attendance is steadily increasing.

Higher-class Schools, 4th Division.

37. In the 4th Division, the London Mission School, Salem, has given up its grant and is no longer under inspection, while the S. P. G. High School, Poriar, has been transferred from the middle to the higher class. The total number of schools remains therefore unaltered. It will be seen from the following statement that the increase in the attendance of these seven schools is insignificant, but that the number of pupils who matriculated has risen from 35 to 48, the number in the first class being five against seven. The only one of these schools which was inspected during the year was the Town School, Combaconum :—

The attendance in the Zillah School of Chittoor has fallen off, especially in the lower department. On the death of C. Tiruvengada Naidoo, Mr. Bilderbeck was appointed Headmaster, but never joined, as his services were required, first as Professor of History in the Presidency College, and afterwards as an Assistant to Mr. Metcalfe at Rajahmundry. Mr. Burroughs was accordingly placed in charge of the Chittoor School, but he remained for only a few months, as he was required to take the place of Mr. Moss at Mangalore, and Mr. Ramachendriah was appointed to act as Headmaster. The school did not acquit itself well in the Matriculation examination, as only 8 out of 30 candidates passed, all in the second class. In the Comparative examination, the upper fourth class was only moderately successful.

The attendance in the Zillah School of Salem has also fallen off and only 12 boys went up for the Matriculation examination, of whom 9 passed, two in the first class. The upper fourth class acquitted itself very indifferently at the Comparative examination.

The Town School, Combaconum, is managed by the Principal and masters of the Provincial College and is a very important institution. Mr. Gopal Row, who inspected the school in September, states that the knowledge of English shown by the fifth class was superior to that of average matriculates and that a very high standard was maintained in all the classes. A Matriculation class has since been formed.

All the other schools in the list show an advance on last year as regards the number of pupils who succeeded in matriculating.

Higher-class Schools, 5th Division.

38. In the 5th Division, the Subscription School of Tuticorin has been transferred to the middle class, and a new Hindu School at Palamcottah has received a grant and been brought under inspection. The number of schools of the higher class remains therefore unaltered. The increase in the attendance is small, but the number of pupils who matriculated has risen from 25 to 56, of whom only two were placed in the first class.

The Hindu Anglo-Vernacular School, Caroor, serves as a high school to the results schools in the town, and it avoids all rivalry with them by having no lower department. Mr. Marden found the school in a very satisfactory condition when he inspected it in June 1876, the highest class being a preparatory matriculation class. This was as far as the masters then employed could carry the school. The managers have since secured the services of a First Arts man.

Mr. Marden inspected the Zillah School of Madura in December. The general result of his examination was decidedly satisfactory. The apparent severity with which promotions were regulated last year had, he thought, told well on the work of the year. The school greatly distinguished itself in the Matriculation examination. Sixteen out of twenty pupils who went up direct from the sixth class passed, and one was placed in the first class. Five other candidates who had attended the school for about six months all passed, one in the first class. The upper fourth class occupied rather a poor position in the Comparative examination of Provincial and Zillah Schools. The Headmaster, Mr. Phillips, who had been for some time in a very feeble state of health, died just at the close of the year.

Mr. Marden inspected the S. P. G. High School at Ramnad in July. The school passed a moderately good examination. In the Matriculation examination six out of eleven candidates passed, against five last year.

The Anglo-Vernacular School, Shivagunga, was inspected in July. The standard had been raised, the staff had been strengthened by the appointment of two First Arts men and a matriculate above the old Headmaster, and the general result of the inspection was satisfactory. Two pupils are entered in the Gazette as having matriculated from this school, but the highest class as yet formed is a preparatory Matriculation class.

The Hindu Anglo-Vernacular School, Tinnevelly, passed 22 out of 30 pupils at the Matriculation examination, and the staff has been very much strengthened, there being three graduates against one last year. Mr. Kershaw was not, however, altogether satisfied with the state of the school when he visited it in March. Boys had been systematically promoted to classes for which they were unfit for fear they should desert and join a rival school recently started, and he thought that the managers were wrong in keeping up a large preparatory class, for which there was no accommodation, merely because it was profitable. The teachers in this school are very poorly paid. There are two First Arts men drawing only Rupees 16 each.

Mr. Kershaw inspected the Church Missionary Society's Anglo-Vernacular School at Tinnevelly in March and found it in a most unsatisfactory state. The teachers were men of very humble qualifications and the boys were unfit for the classes in which they had been placed

The general result was that the teaching throughout was of a very unsound character. Specimens of some of the exercises sent up by Mr. Kershaw have been forwarded for such action as the Madras Committee may deem necessary, but I have not yet been informed what steps have been taken to place the school in a more efficient condition. Five out of nine pupils passed the Matriculation examination.

The Hindu Anglo-Vernacular School, Palamcottah, is a new school, which has recently received a grant. Mr. Marden inspected it in February and was on the whole satisfied with the state of the school. A number of pupils had however been admitted into the fifth class who were not at all fit to join it, and the rules regarding free scholarships had not been observed. Six pupils went up for the Matriculation examination and two passed.

Higher-class Schools, 6th Division.

39. The number of Higher-class Schools in the 6th Division is reduced from four to three, owing to the transfer of the Breeks Memorial School to the middle class. The attendance has on the whole increased, and the number of pupils who matriculated has risen from 19 to 38, of whom 3 were in the first class against one last year.

The Local Fund High School, Palghaut, was inspected by Mr. Garthwaite in September. The upper classes passed a very good examination. The standard of some of the lower classes was not quite so high as it should have been. Since the inspection, the two lowest classes, which were abolished some years ago, have been re-established on the ground that they were needed as feeders to the upper classes. The large increase in the attendance is mainly due to this cause. Thirty-one pupils were sent up to the Matriculation examination and twenty passed, two in the first class. Under Government Order, No. 117 of the 21st March 1877, this school is to be constituted a Zillah School.

The Zillah School of Tellicherry has improved in every way. The attendance has increased considerably, especially in the upper school. Ten out of 14 pupils passed the Matriculation examination against 6 last year. The upper fourth class occupied a respectable position in the Comparative examination and the other classes passed a fair *vivâ voce* examination when Mr. Garthwaite inspected the school in March. Mr. Garthwaite thought, however, that there was still a want of adequate supervision on the part of the Headmaster.

There has been an apparent falling off in the attendance at the Anglo-Vernacular School of Cannanore. Mr. Garthwaite's inspection was held "late in March and the promotions from the affiliated elementary School, which supplies the place of the lowest class, having been deferred until after the inspection, the names of the boys promoted were brought on the rolls only on the 1st April." The result of Mr. Garthwaite's inspection showed that the upper classes were doing fairly, but that the lower classes required better teaching. At the Matriculation examination, eight out of sixteen boys passed, one in the first class—a very creditable result, considering the weakness of the staff.

The Breeks Memorial School passed two pupils at the Matriculation examination, but as the upper classes have been abolished, this school will be noticed in the next section of this report.

Comparative Examination of Provincial and Zillah Schools.

40. I noticed in my last report the circumstances which had led to the revival of a Comparative amination of the upper fourth classes of Provincial and Zillah Schools. This examination was held on the 13th November 1876 and three subsequent days. Two days were devoted to papers of questions, mainly prepared by the Inspectors of Schools, by whom the greater part of the written portion of the examination was conducted. A *vivâ voce* examination in English, conducted by the Headmaster of each school, was held during the last two days. The general result of the examination is shown in the following table :—

Schools.	Average age.	Average Marks.											Number of Pupils who obtained				Total number presented.
		English.			Translation.	Arithmetic.	Euclid and Algebra.	Vernacular or Sanscrit.		Geography.	History.	Total.	Half the maximum.	One-third.	One-fourth.	Less than one-fourth.

											Total ...		10	122	119	112	363

N. B.—In the averages under each separate subject, allowances have been made for absentees. In the grand total and subsequent columns the actual figures have been taken and no allowances made on account of boys who sent in no papers.

The Zillah School of Cuddalore headed the list in the average number of marks, and the Provincial School of Rajahmundry passed the largest number of candidates. The Provincial School of Mangalore also passed a large number of candidates, and the Zillah School of Kurnool secured high average marks for the few pupils sent in. The Provincial School of Calicut and the Zillah Schools of Cuddapah, Tellicherry and Chittoor all did fairly. At Madura and Salem the results were poor, very bad at Berhampore, and disgraceful at Bellary. On the whole there was some improvement. As was the case in the previous year several of the papers set were too long and too difficult, and it became necessary to take one fourth, instead of one-third, of the maximum number of marks as the standard entitling a boy to promotion to the fifth class. The statement in the margin compares the general result of this examination during the last two years. The effect of the institution of this examination will begin to be seen in the next Matriculation examination.

Proportion of marks.	1875-76.	1876-77.
Half...	4	10

Revision of Curriculum in Government Schools.

41. Many years ago a scheme of study was drawn up for Provincial and Zillah Schools, and from time to time various modifications have been made in the course. Four years ago the Committee for the Revision of School Books recommended a good many changes in the books in use, and suggested that the Zillah School course should extend over seven instead of six years. Some orders were accordingly issued on the subject by the late Director, but I found from numerous references which came in that there was a good deal of uncertainty with regard to the work to be done in each class, and, after consulting the Inspectors of Schools, I issued a revised curriculum on the 17th June 1876. Hitherto specific portions of books have not been generally prescribed, and although some of the Inspectors and Headmasters have endeavoured to supply this defect, it has happened that in many schools pupils have been promoted from one class to another after reading very small portions of their text books. The style of teaching which prevails in our Normal Schools seems to have to some extent developed this tendency, but no foreign language can be effectively acquired in this way. In the University examinations this is guarded against by prescribing tolerably large portions for study. In the revised curriculum, not only the book, but the portion which is to be read in each class, is defined, and arrangements have been made for enforcing more attention than has been hitherto paid to copy writing, dictation, exercises, and translation,

all of which have been very much neglected. There has also been a good deal of confusion arising from the standards of the lower classes being entirely different from those prescribed for Taluq Schools and Results Schools. This has been remedied. The introduction of a more definite curriculum has not been confined to Government Schools. Many managers of Aided Schools have applied for a copy of the scheme and have introduced it into their own schools.

Physical training.

42. At the commencement of the official year, a copy of my letter to Government regarding the introduction of a system of physical education into the schools of this Presidency was communicated to the Inspectors of Schools and Heads of Government and Aided Colleges and Schools, with information regarding the system pursued in the other Presidencies and the amount available for expenditure. Very few replies were received during the year. The Inspectors of the 4th and 6th Divisions recommended in general terms the establishment of gymnasia at the stations noted in the margin, but entered into no particulars, and nothing has yet been done in these Divisions. In the 5th Division, Mr. Marden proposed that an ex-student of the Zillah School of Madura, who was a proficient in the native system of gymnastics, should be entertained on a salary of Rupees 10, which was to be supplemented by fees from the pupils, who were stated to be willing to pay 2 annas a month to be instructed by him. This arrangement has been sanctioned as a temporary measure. In the town of Madras, grants amounting to Rupees 428-15-2 have been given for gymnastic apparatus to the Doveton College, the Civil Orphan Asylum, and Patchcappah's High School, and the question of establishing a gymnasium open to all schools is under the consideration of a Committee. At Chedumbrum, a grant of Rupees 89-4-3 has been given for gymnastic apparatus to Pacheappah's branch school and a grant of Rupees 3-8-0 a month towards the salary of a gymnastic teacher.

VI.—Middle-class Schools.

Scheme for remodelling Government Schools of the middle class.

43. In April 1876, Government sanctioned certain proposals submitted by me for remodelling the Government Anglo-Vernacular and Taluq Schools. This scheme has been carried out during the year in all the schools, except those of the 6th Division. The schools are now classified as follows :—

1st Class.	2nd Class.	3rd Class.	
1st Division.	*1st Division.*	*1st Division.*	
Chicacole.	Russellcondah.	Tokkali Raghoo-nathpur.	Virdachellum.
Guntoor.	Bimlipatam.	Itchapur.	Port Novo.
	Ankapally.	Purushotmapur.	Kalikurchi.
4th Division.	*2nd Division.*	Palcondah.	*4th Division.*
Wallajahpettah.	Ongole.	Chodaveram.	Tripaty.
Arnee.	Anantapur.	Kassimkotah.	Palmanair.
Tripatore.		Gunapur.	Oossoor.
Srirungam.	*3rd Division.*	Viravaseram.	Kistnagherry.
Trivadi.		Amlapur.	Puttucotta.
Tiruvarur.	Villapuram.	*2nd Division.*	Tiruvadamurdur.
	4th Division.	Adoni.	*5th Division.*
	Arcot.	*3rd Division.*	Pollachy.
	Darampuri.		Suttiamungalum.
	Namkul.	Poonamallee.	Darapuram.
		Trinomalai.	Dindigul.
	5th Division.	Punrooty.	Periakolum.
		Trikalore.	
	Udumalapettah.	Tindevanum.	
	Erode.	Villapuram.	

The lowest or purely vernacular class has been abolished. As this was generally one of the largest classes, the total attendance shown in the returns will of course for some time to come be less than it used to be. The inferior masters, who have been thus thrown out of employment, and who generally received very small salaries paid from the school fee fund, have been allowed to gain their livelihood by opening Results Schools as feeders to the Government Schools, and provided they confine their teaching to the first and second standards, they have been allowed to hold their classes in a room or verandah of the Government building. The nomenclature of the classes in the Anglo-Vernacular and Taluq Schools is now the same as in the Zillah Schools. Thus the old fifth class is now known as the lower fourth, and every Taluq School of the second grade is expected to reach this standard, while in the third grade the highest class is the third and in the first grade the upper fourth. The scale of school fees has been lowered to the rates shown in the margin, except at Srirungam, Trivadi, and Tiruvarur, where it has been deemed unnecessary to make any reduction. In some Divisions, notably in the 4th, masters of higher qualifications than those hitherto employed have been appointed. Not only are First Arts men more common than they were in these schools, but even a few graduates are now employed as masters. As, however, the new arrangements

	RS.	A.	P.
Upper fourth ...	1	8	0
Lower fourth ...	1	0	0
Third	0	12	0
Second	0	8	0
First	0	6	0

had been in force for only a few months, and in some instances for only a few weeks before the close of the official year, there has not been time yet for any great improvement in these schools.

Transfer of all Results Schools to the lower class.

44. When the rules for results grants were first promulgated in this Presidency, they were expressly declared to be intended solely for elementary schools. After the passing of Acts III and IV of 1871, it was considered desirable for financial purposes to view some of these schools as Middle-class Schools, and a somewhat indefinite line of demarcation was laid down for this purpose. In November 1875, the line of demarcation was made more rigid and the statistics of last year showed few results schools of the middle class. Under Government Order, No. 828, of the 27th February 1877, all Results Schools have been now relegated for statistical purposes to the lower class. No school of this class will therefore be noticed in this section.

Middle-class Schools, 1st Division.

45. The following statement shows the attendance, standard, and condition of the Middle-class Schools of the 1st Division. The attendance in the 29 schools contained in this list has fallen from 1,707 to 1,595, which is not much when the abolition of the vernacular classes is taken into consideration, while on the other hand the number in the middle department of these schools has risen from 413 to 503 :—

School.	Locality.	31st March 1876.			31st March 1877.			Highest Class.		Condition.

In the Ganjam District, the Onslow Institution has disappeared from the list, while the Samasthanum Branch School, Srikurmam, and the Proprietary School, Urlam, which ranked last year as elementary schools have been added to it. The Onslow Institution, after being for some time without a Headmaster, was closed for several months. Mr. Kershaw reports that a Madras graduate has now been engaged and that he "trusts soon to find this school showing a life and a strength which it has never shown before." The Anglo-Vernacular School of Chicacole is the most satisfactory school of its class in the Division. It has no class lower than the second, and the middle department has increased from 70 to 90. Mr. Kershaw examined this school in December and considered that the results were generally satisfactory, except in English Reading and Arithmetic. The Taluq School of Russellcondah is the most promising of the Taluq Schools, and the Taluq School of Purushotmapur is the least successful. All the private schools are in an unsatisfactory state, with the exception of the Zemindary School of Parla Kimedi, which has the advantage of Mr. Taylor's supervision. The Urlam School receives no aid from Government. It was originally opened by the proprietor of Urlam for the education of his son, and no fees are received from any of the boys.

In the Vizagapatam District, the Taluq School of Chodaverum and the Subscription School of Yellamanchili have been transferred to the lower class, while the Taluq School of Gunapur, the Local Fund School of Parvatipur, the Subscription School of Nursapatam, and the Samasthanum Branch School of Voddadi now rank as Middle-class Schools. The Taluq Schools of the Vizagapatam District are not generally speaking in a satisfactory state, mainly owing to the low qualifications of the teachers employed in them. The only school which was favorably reported on after the annual examination was the Taluq School of Palcondah. At such a station as Gunapur, very little progress can be expected, but at such places as Bimlipatam and Ankapally, Taluq Schools, if properly officered, ought to flourish. At Parvatipur there were only two masters for five classes, but the Local Fund Board have now appointed an additional teacher, and there seems a probability of this school becoming a tolerably good one. Among the private schools, the Zemindary School of Bobbili is the only one in which there is a pretty good middle department.

There has been no change in the list of Middle-class Schools in the Godavery District. The Taluq School of Viravaseram, which used to be the best in the Division, is less advanced than it was fifteen years ago. The failure of the school seems largely due to the appointment to it as Headmaster of a young man fresh from school. At Amalapur a First Arts man has been appointed and the attendance and standard are rising. The Subscription School, Innespettah, and the Town School,

Rajahmundry, are feeders to the Provincial School. They have both improved and are gradually becoming important institutions. The Zemindary School of Pittapur passed a tolerably good examination and the attendance is increasing. The Thallapudi and Akuvidu Schools are feeble specimens of their class.

In the Kistna District, the Church Mission School and the Hindu School of Bezwada, which ranked last year as Middle-class Schools, have been transferred to the higher class. The number of Middle-class Schools is thus reduced to three. The standard of the Anglo-Vernacular School of Guntoor is somewhat higher than it was, but the attendance has fallen off both in the middle and lower departments, and the results of Mr. Kershaw's inspection were not so good as they were last year. This school has a formidable rival in the Mission School of Guntoor, but the failure seems mainly owing to the inferior qualifications of the teachers employed. This has now been to some extent remedied by the appointment of two First Arts men. The Church Mission Mahomedan School, Masulipatam, is miserably officered, the teaching staff consisting of two 5th Grade men and three men who have not passed any examination. The standard of the Church Mission Branch School, Masulipatam, is a little higher than it was, but the attendance has fallen off.

Middle-class Schools, 2nd Division.

46. The following statement shows the attendance, standard, and condition of the Middle-class Schools of the 2nd Division. There is a small reduction in the total attendance, and a very small increase in the middle department. It will be observed that there are only three Taluq Schools and one private school of the middle class in the whole Division. Such middle-class education as there is is mainly in the hands of the Local Fund Boards:—

School.	Locality.	31st March 1876.			31st March 1877.			Highest Class.		Condition.

In the Bellary District, the new Municipal School of Bellary, the Local Fund School of Tadpatry, which was last year an elementary school, and the Local Fund School at Hospett, which was a mixed school, all appear in this year's list of Middle-class Schools. On the other hand, the Local Fund School of Raidroog has become a mixed school, and the Roman Catholic School in the Native Infantry Lines at Bellary has been transferred to the lower class. The Taluq School of Anantapur has been for some years in an unsatisfactory state. Mr. Fortey observes that it "was formerly very successful, but the removal of the Head Quarters of the Sub-Collector to Gooty was a blow, and the opening of a Municipal School where the fees charged are almost nominal was another, and now the famine year has almost completed the works of destruction." There are now only twelve boys left in the school and the question of transferring it to some other station is under consideration. The falling off of the Taluq School of Adoni is also partly due to the existence of a Municipal School, partly to the famine, and partly to imperfect supervision on the part of the Deputy Inspector. The new Municipal School of Bellary has proved a success as regards attendance and progress, but the main object for which this school was established has been entirely lost sight of. It was to have been a feeder to the Provincial School, and was to have contained only those elementary classes which have been abolished in the Provincial School. But the Headmaster has been allowed to have a third class competing with the third class of the Provincial School, and the Municipal School has thus injured instead of benefited the Provincial School. This class has been recently abolished, and the Municipality have resolved to keep the school to its legitimate work. Except at Tadpatry, the reports on the Local Fund Schools are not favorable. Sufficient discrimination does not seem to be exercised in the selection of masters, and the Inspector is not always consulted with regard to new appointments. The Anglo-Vernacular School in the Cowle Bazaar again passed a bad examination, and the manager has been warned that unless the school improves the grant will be withdrawn.

Mr. Fortey makes the following remarks regarding the Local Fund School of Nundial:—"In the Kurnool District, there is only one school of the middle class. that at Nundial. It was inspected by Mr. Bradshaw and found to be in a most unsatisfactory state, which he attributed to its being under the management of a Local Committee. At the time of Mr. Bradshaw's visit, two of the masterships were vacant and the others were filled by men, none of whom had passed any examination. A matriculate has since been appointed as Headmaster, but, as the salary is Rupees 40 per mensem, the services of a person who had passed the First Arts examination might, I think, have been secured." The Municipality of Cumbum having been abolished, the Municipal School of Cumbum has been closed.

There are three Local Fund Schools of the middle class in the Cuddapah District. Mr. Bradshaw inspected the Jamalamadugu and Prodatore Schools, and his report is not favorable. The following extract from his report on the former will give some idea of the way in which some of these Local Fund Schools are managed :—"For the past six months the Headmaster, K. Bheema Row, has been on leave (on forfeiture of full pay) until he should see how he should succeed as a Pleader; and he has now sent in his resignation. Meantime the Second Master, Vencoba Row, has been acting as Headmaster. One Srinivasa Row, who had applied for the post, was appointed in December, but did not join, having secured a place in the Court at Cuddapah. After that, one B. Ramachendra Row was appointed, and after holding the appointment for a few weeks left to take up a post in the Deputy Collector's Office, Kurnool. The Third Master, Butchiah, left in March without notice for an appointment in the Female Normal School, Madras, and a man named Sambiah who was appointed to succeed has not taken up his place. Thus for the last two or three months the school has been in charge of the Second Master, and the classes have suffered for want of teachers." The school at Budwail is reported by the Deputy Inspector to be in a tolerably satisfactory state.

In the Nellore District there has been a considerable reduction in the number of Middle-class Schools, owing to the transfer to the lower class of the Municipal School of Mulapett and the Local Fund Schools of Buchireddipalem, Duvur, Sulurpet, Vindoor, Koretoor, and Sungum, while the only school which has been added to the list is the Local Fund School of Gudur, which was last year a Mixed School. The Taluq School of Ongole is decidedly improving. The standard has risen, and the strength of the middle department has increased from 20 to 33. The school passed a satisfactory examination at Mr. Fortey's inspection. The senior classes of the Local Fund Schools were examined at the annual educational Durbar, but the Kaligherry School was not represented at this examination. The following extracts are taken from Mr. Fortey's report :—

"The most unsatisfactory feature in connection with the last Durbar was the smallness of the number of pupils brought in for examination. The numbers examined in 1873, 1874, 1875, 1876, were 73, 89, 103, and 83, respectively, so that last December there was a decrease of 20. For this falling off, various causes were assigned. One school, that at Kaligherry, which in 1875 sent in 15 boys, in 1876 sent in none, and the Deputy Inspector said that cholera had been so prevalent in that village, that all the boys had left the school. Another small decrement in the attendance was said to be due to the circumstance that in the course of the year the fifth classes at Naidupett and Venkatagherry had been abolished. The pupils in those classes might have continued in the schools had they chosen to enrol themselves in the upper fourth classes which were constituted in lieu of the fifth;

but the new course of study did not include the Matriculation text-book, and the change of nomenclature from fifth to upper fourth was considered an indignity, so they left. No doubt also the attendance was affected by the famine. I was informed that some boys who should have been sent in from Kandukur left the school a few days before the examination and got employment as head coolies on Relief Works.

* * * * *

"In English, the averages gained are on the whole very fair. In Telugu, the Deputy Inspector reported that the answers were good in substance, but ill written and wanting in neatness. In Arithmetic and Euclid, the average of the upper fourth was 32 per cent. of the maximum—a fair result, but that of the lower fourth was 21 per cent. only, or decidedly poor. The averages for the 3rd class were good in all the schools

"A marked failure in the upper fourth classes was Physical Geography. It was clear that no attention had been paid to this subject, and I do not think the teachers themselves had tried to master the prescribed text-book.

"I afterwards visited five of these schools and examined the lower classes. What chiefly struck me was the large proportion of boys in the lowest or vernacular class. But few of these boys remain to be promoted to the first class, and of these again a still smaller number rise to the second class, and so on. So that the attendance in the upper classes of these schools is very small and a good deal of teaching power is wasted."

In this district also the Inspector's advice does not appear to be followed in the selection and promotion of masters in Local Fund Schools, as will be seen from the following passage in Mr. Fortey's report on his inspection of the Local Fund School of Gudur:—

"I may beg to say that the late Headmaster of this school, who does not seem to have done his work very satisfactorily, was in the middle of December last promoted by the President of the Local Fund Board to the more important post of Headmaster of the Local Fund School at Naidupett. The person recommended by Mr. Bradshaw for the appointment at Naidupett was a trained Normal student who had passed the First Arts examination, but the Acting President of the Local Fund Board selected the Headmaster of the Gudur School in preference presumably on account of his length of service, he having been a Local Fund School Master for about five years."

Middle-class Schools, 3rd Division.

47. The following is a list of Middle-class Schools in the 3rd Division. The Balura Pathasala, Triplicane, has been transferred to the higher class and the Anglo-Vernacular School, Munjacoopum, which ranked last year as a lower-class school, has become a middle-class school. In other respects the list corresponds with that of last year. The attendance in these 25 schools has fallen from 2,653 to 2,476, but the middle departments contain 831 boys against 743 last year:—

The attendance in the Madrasa-i-Azam has fallen, but the middle department is numerically stronger, and the standard is somewhat higher than it was last year. The revised scheme of study for Middle-class Schools has not however been carried out, and only 6 out of 16 pupils from this school were found fit for admission into the Presidency College. The anomalous financial position of this school was noticed in my last report. Sanction was accorded in Government Order, No. 111, of the 20th March 1877, to a revised scale of establishment, under which all the teachers are to receive salaries rising by biennial increments, while some unnecessary charges have been reduced. The Mahomedan Anglo-Vernacular School, Mylapore, has been for some years in an unsatisfactory state. Mr. Fowler inspected it in February and found that the standard was a little higher than it had been, but that the teaching was far from efficient. The Headmaster has since been transferred to an inferior post in the Madrasa-i-Azam. St. Peter's Roman Catholic School was formerly directly under the Bishop, and was held in a building off the main road, Royapoorum. It is now under the management of the Headmen, and is held in a building in St. Peter's Church compound. The school did tolerably well at Mr. Fowler's inspection in February, but the highest class, although called a fifth, was scarcely a lower fourth in standard. In the Lutheran Mission School, Pursewalkum, the highest class had only reached the standard of a lower fourth, and the fees were not in accordance with the scale prescribed. The male branch of the Civil Orphan Asylum was found in a very efficient condition when it was inspected in February. Euclid and Algebra are not taught in this school, but exceptionally high marks were gained in Arithmetic. Eight boys were learning carpentering; three others were engaged in the bakery of the Asylum, the corn being ground and all the bread made on the premises. Five boys were learning printing, and one with some assistance was attending the Civil Engineering College. These six boys did not however live on the premises. A grant of carpenter's tools, of the value of Rs. 185-5-0, has been recently made to this institution on the understanding that the Directors are to guarantee the continuance of instruction in carpentering to not fewer than eight boys for at least five years. The result of Mr. Fowler's examination of the Davidson Street School and the Union School, John Pereira's, was not satisfactory. In both too much had, he thought, been attempted. The rates of school fees in the Union School were in his opinion far too high for such a poor locality, and he questioned the expediency of teaching Latin, Euclid, and Algebra to boys of this class. Govindoo Naidu's Primary School is a large and important school of its class which sends up about a hundred boys annually to Patcheappah's High School. A great improvement has been effected in it this year by forming separate divisions for Telugu and Tamil boys. St. Francis Xavier's School appears to have been visited by Mr. Fowler, but he has not reported on it. The other schools were not inspected.

In the Chingleput District, the Taluq School of Poonamallee does not rise above mediocrity, and the Wesleyan Mission School at St. Thomas' Mount passed a poor examination at Mr. Fowler's inspection. The Manager informed the Inspector that he proposed abolishing the lowest class, and hoped to secure greater soundness in the teaching of the others by taking part in the instruction himself. The Roman Catholic School at Palaveram was not inspected.

There are eight Taluq Schools in South Arcot. They are rarely visited by the Inspector. The only one of them which he seems to have examined this year is the Taluq School of Tindevanum, which is in fair order. Mr. Duncan states that most of the others give promise under the new organization of achieving improved results. The S.P.G. School, Old Town, Cuddalore, does not appear to have been visited. The standard of the Anglo-Vernacular School, Munjacoopum, is rather low, but the school passed a fair examination.

Middle-class Schools, 4th Division.

48. The following is a list of Middle-class Schools in the 4th Division. It will be seen that the total attendance in these 46 schools has fallen from 3,930 to 3,738, but that the middle departments contain 1,073 boys against 932 last year. Only eight of these schools, in the Trichinopoly and Tanjore Districts, appear to have been visited by an Inspector during the year:—

In North Arcot the list has been increased by the addition of the Taluq School of Palmanair and the Anglo-Vernacular schools of Guriattum, Arconum, and Ranipett, which last year ranked as lower-class schools. Most of the schools in this district seem to have been examined by the Deputy Inspectors, but their reports have not been forwarded.

In Salem, the Town School, Salem, has been transferred to the middle class, and the Local Fund School, Haroor, to the lower class. No reports have been received on any of the schools of this district.

In the Trichinopoly District there has been no change in the list of schools. The Anglo-Vernacular School of Srirungum was inspected by Mr. Gopal Row in November. Although the vernacular class, which at the last previous inspection contained 84 out of 170 boys, had been abolished, the attendance amounted to 160, and all the classes were numerically much stronger than they had been, there being 24 boys in the upper fourth. The standard required under the new scheme had not been fully reached, but the school was in a promising condition. After the inspection, the number of boys fell off and was reduced at the end of the year to 88, owing, Mr. Bradshaw states, to the existence of competing schools. The three lower classes of the Wesleyan Mission School, Trichinopoly, passed a satisfactory examination, but Mr. Gopal Row found the work done in the upper and lower fourth class of a very unsound character. "Most of the students of the upper fourth were more men than boys; they had not risen through the lower classes of the institution, and were evidently waifs and strays, the sweepings of other schools." Mr. Brown has agreed to abolish this class. The Anglo-Vernacular School, Kulitalai, passed a fair examination. Mr. Gopal Row observes that no school he has ever seen commands better material and that the teachers are painstaking. An injudicious attempt had however been made to teach the Matriculation text book in the upper fourth class. The managers of this institution are very anxious that the school should be constituted a Taluq School, but their request was refused by Government last year. The Lalgudy School is doing fair work, but the middle department is very weak. The Anglo-Vernacular School, Turaiyur, does not appear to have been inspected.

In the Tanjore district, the S. P. G. School, Poreyar, has been transferred to the higher class, and the Roman Catholic Anglo-Vernacular School, Tanjore, has been transferred from the lower to the middle class. The Anglo-Vernacular School of Trivady, when it was inspected last year, contained 176 boys, of whom 85 were in the vernacular class. This year, notwithstanding the abolition of this large class, Mr. Gopal Row found 167 boys on the rolls. The lower classes were generally better than those at Srirungum, but the upper fourth was on the whole inferior. The middle department of this school already contains 70 boys. The Taluq School of Tiruvadamarudur passed an indifferent examina-

tion, owing to the inefficiency of the staff. The school having been remodelled, better results may be expected next year. Mr. Gopal Row also examined the Anglo-Vernacular Schools of Kapistalam and Palamanary. The former passed a very good and the latter a fair examination, considering that it had only recently been reorganized. The other fifteen schools do not appear to have been inspected.

Middle-class Schools, 5th Division.

49. The following is a list of Middle-class Schools in the 5th Division. The total attendance is shown as having increased from 1,809 to 1,835, while the middle department has advanced from 497 to 519. This increase is however only apparent, as the statement does not show the attendance in the Wattrap and Calacad Schools last year :—

School.	Locality.	31st March 1876.			31st March 1877.			Highest Class.		Condition.

* Exclusive of five boys in the upper department.

Mr. Marden inspected the five Taluq Schools of the Coimbatore District and found them all in a satisfactory state, especially the Udumalapetta School, which has a class beyond its proper grade, as is also the case at Darapuram. The Kongayam Local Fund School was visited three times by the Deputy Inspector, and appears to be making satisfactory progress. The London Mission School, Coimbatore, was found in fair order at Mr Marden's inspection.

Mr. Marden visited both the Taluq Schools in the Madura District. The Dindigul Taluq School was not in a satisfactory state, and although at Periakulam the masters had done their work well the attendance was small. Since the inspection, the standard has fallen, a small lower fourth class having disappeared. All the aided schools of this district were also inspected by Mr. Marden. The failure of the Christian Anglo-Vernacular School, Madura, and of the Anglo-Vernacular School, Sholavandan, was partly attributed by the Managers to the examination having been held at an unusual time. At Paramagudy, some improvement may be expected as the Managers have secured the services of a graduate as Headmaster. The other schools do not call for any special notice.

In the Tinnevelly District, the Subscription School, Tuticorin, and the Anglo-Vernacular Schools of Wattrap and Calacad have been added to the list, the two latter having been constituted Salary Grant Schools during the year. On the other hand, the Church Mission School, Srivelliputtur, has been placed on the results system. There are no Government Schools in this district, and middle-class education is still to a considerable extent in the hands of the S.P.G. and Church Missionary Society, although the number of Hindu Schools is beginning to preponderate. The most important of these schools is the Subscription School of Tuticorin, which was last year a higher-class School. It was found in an unsatisfactory state by Mr. Kershaw, who considered that the present Head Master is not likely to raise the school to the standard which it formely reached. Mr. Kershaw found the Church Mission Schools at Mengnanapuram and Suviseshapuram in fair order, although the standard in both is low. His reports on the S. P. G. School at Alvar Tinnevelly and the Anglo-Vernacular School of Nanguneri were unfavorable. All the other schools were visited only by the Deputy Inspectors with the results shown in the table. The attendance in many of these schools is small, and the middle department in some of them consists of three or four boys and even of one or two.

Middle-class Schools, 6th Division.

50. The following is a list of Middle-class Schools in the 6th Division. The total attendance has risen from 2,837 to 3,068, and the middle department contains 1,391 pupils against 637 last year, but in this number appear to be included the pupils of the third class of the Local Fund Schools, who are somewhat below the regular standard of the middle department in ordinary Government and Aided Schools :—

* Exclusive of nine boys in the upper department.

In Malabar, the Local Fund Schools of Ponani and Tanur have been closed, while the Local Fund Schools of Anjerakandi, Manantoddi, Kallayi, and Mayanad have become Middle-class Schools. Speaking of the three schools at the head of the list, Mr. Garthwaite makes the following remarks.

"The attendance at all the Government Middle-class Schools in Malabar has increased; they all did more or less fairly at my inspection, and they all may be considered to be on the whole in a satisfactory condition, that at Badagara being the best. Three of the boys who left from the highest class of this school and joined the Cannanore Anglo-Vernacular School in the beginning of 1876 passed the Matriculation examination held in December 1876. One of these is now in the F.A. Class of the Calicut Provincial School."

The Municipal School at Cochin was inspected in October and was found in a more satisfactory state than it was formerly. Nevertheless the stability of the school was doubtful. The expenses of the school had been already reduced without materially affecting the efficiency of the institution, but even this expenditure was too heavy for the Municipality and further reductions were contemplated. The Kalpatti Municipal School continues to improve and some progress has been made in the Calicut Municipal School. The attendance in most of the Local Fund Schools has increased, and all, with the exception of the one at Manantoddi, are described as in a more or less satisfactory condition. The fact that a Mappila School has this year become a Middle-class School, though of the inferior type above referred to, is worthy of note. The most important of the aided schools is the German Mission Anglo-Vernacular School, Calicut. This school does not seem to be improving. Mr. Garthwaite still complains that the masters neglect their work and think of nothing but preparation for special test examinations. The Protestant Boys School, Cochin, has improved and the standard is rising. The Church of England Boys School, Cannanore, was originally an Anglo-Tamil School for the children of the camp followers at Cannanore, but of late years it has become an ordinary Anglo-Malayalam School, managed by the Chaplain, and attracting pupils by charging fees below the prescribed rates. The school was, in Mr. Garthwaite's opinion, of very little use, and it has recently been given up.

In South Canara, the list corresponds with that of last year, with the exception that the Taluq School of Kasaragode has now become a Middle-class School. The Kasaragode and Udapi Schools are making fair progress. The Karkala School was not found in a satisfactory state and the Headmaster has been removed. The smallness of the attendance in these schools is ascribed to the abolition of the vernacu-

lar classes which have been transferred to elementary Local Fund Schools. "This arrangement," Mr. Garthwaite observes, "does not work so well as I anticipated; it is found that boys who enter the lower classes of a middle school were generally willing to pursue their studies on to the upper classes, but that boys who have passed through the curriculum of a lower-class school too often regard their education as completed and cannot be attracted to the middle-class school. I have now tried in schools of various grades the plan of substituting *quasi* affiliated schools for the lower classes of the school experimented on, but I begin to doubt whether it works efficiently. I think that both for recruiting purposes and on financial grounds it is not so successful as the old plan. In a good school and with moderate fees, the attendance in the lower classes is large, while the remuneration of the teacher can generally be fixed low, so that these classes often cost less than they bring in, and they certainly fill the upper classes better than outside feeder schools do." The table shows, however, that there has been a very considerable increase in the middle department of these schools. The Local Fund Schools, which are officered by a small service of passed and trained masters and provided with suitable buildings and apparatus, are in a satisfactory state. The year has been one of sickness and scarcity, and the attendance has suffered from these causes. It is worthy of remark that while the middle departments of the Taluq Schools have increased in strength, there is a decrease in all the Local Fund Schools, except at Mulki, and even the Mulki School stands now below the Taluq School of Udapi. The only salary grant school of the middle class in this district is the Roman Catholic School at St. Rozario, Mangalore. It was found in a satisfactory state at Mr. Garthwaite's inspection.

In the Neilgherry district, the number of Middle-class Schools has risen from one to three, owing to the Breeks Memorial School having been transferred from the higher to the middle class, and the Church Mission Anglo-Vernacular School, Ootacamund, from the lower to the middle class. The Ootacamund Lawrence Asylum was inspected by Mr. Garthwaite in July. He drew attention to the weakness of the staff of masters and to some defects in the classification and scheme of study. Government considered however that the results achieved were fairly satisfactory for a school established for the education of the children of soldiers. The Committee have since carried out some of Mr. Garthwaite's suggestions. The staff has been strengthened by the appointment of a fifth master, and better reading books have been introduced. Great attention continues to be paid to industrial training. A Survey Class has been established during the year and a very good rule has been laid down, under which all boys above sixteen who do not belong to the Telegraph, Band, and Survey Classes are required to

work during the whole day either on the farm or in the workshops, receiving however an hour's instruction in reading, writing, and arithmetic. The distribution of the industrial classes is shown in the margin. The sickness and mortality have been very much above the average, owing to an exceedingly dry season and to defective drainage. The drought has necessarily affected the success of the farm. Nevertheless, the accounts show that in two years the farm has paid back 72 per cent. of the capital expended, exclusive of assets estimated at Rupees 18,728. Thirty acres have been added to the estate. Five boys died during the year, three were struck off the rolls because they did not return from the holidays, fifteen boys were removed by their parents, four left on account of ill health, thirteen in consequence of their parents leaving India, one was sent to Australia, ten were apprenticed to the Lawrence Asylum Press, five entered the Government Telegraph Department, six the Revenue Survey Department, one the Medical Department, one enlisted in the Artillery, two became domestic servants, and four obtained various other employments. The Breeks Memorial School was inspected in June and passed a fairly satisfactory examination. The highest class was called the upper fourth, but the standard was nearly that of a fifth class, and two pupils succeeded in passing the Matriculation examination. According to the return, there is now no upper department. Mr. Garthwaite considers that the standard of this school is still a little too high for the class for which it is intended. His remarks are as follows:—"Such of the poorer class of Europeans and East Indians and respectable natives as seek Government employment for their children may reasonably be contented if thorough instruction is afforded in the subjects of the Uncovenanted Civil Service General Test, and, as that includes a sound knowledge of the 'three R's' and an elementary acquaintance with Geography and History, it will (with the addition I should recommend of some rudimentary notions of science) represent the amount of education now available for a similar class at home; it may therefore be considered also to fairly meet the claims of those whose children will find private employment. That such a plain education may not content those who are above the class described and of whom some now, in the absence of

any more suitable school, send their sons to the institution under report is very likely; but it does not appear to be desirable that the Breeks School should supply in Ootacamund the place of a school such as there was in Dr. Pope's School and as there may arise again, provided endowed and State aided schools do not pre-occupy the ground. The late Director of Public Instruction in his letter to the Acting Chief Secretary to Government, dated 6th March 1874, No. 354, remarked, 'I am afraid there is danger of the Breeks Memorial School assuming such a character as to make it suitable, not for children of the really poor Europeans and East Indians, but for those of persons who have no right to expect special assistance from the State.' Any one acquainted with Ootacamund who will look over the list of present attendants at the school (see Appendix C.) will I believe agree that Mr. Powell's apprehensions are in a considerable degree justified by the event. I am only a stranger in Ootacamund, but I see names which are those of Europeans and East Indians who though perhaps not in society are better off than many who are. The pressure for a higher standard probably proceeds from this class." The arrangement under which the standard of this school was raised was formally approved by Government in their order reviewing Mr. Thompson's report on Public Instruction for 1874-75. The Church Mission Anglo-Vernacular School, Ootacamund, has hitherto been a lower-class school aided by the Municipality. This year it is, according to the returns, a Middle-class School, but it does not appear to have been inspected.

Remarks on Middle-class Schools.

51. Middle-class education is on the whole in a more satisfactory state than it has been for some years. With one exception, there are now no Taluq Schools which are not middle-class schools in reality as well as in name. The revised curriculum referred to in para. 41 has been introduced into all the Anglo-Vernacular and Taluq Schools, except those in Malabar and South Canara, the status of the teachers has been raised, the fees have been brought within the means of the class of pupils for whom these schools are intended, the inferior teachers have been got rid of, and the purely vernacular classes have been abolished. A Taluq School ought to be as good as a Zillah School as far as it goes, and it seems not improbable that this result will be attained by degrees. The main obstacle at present to the success of these schools is the absence of a middle-class examination, such as exists in Bengal, the North-West Provinces, and the Punjaub. A scheme for an examination of this nature has been recently submitted to Government. The principle of it was approved, but Government wished the measure to be carried out with the co-operation of the University, and as there is no immediate probability of this being secured, the consideration of the matter has been indefinitely postponed.

VII.—Elementary Education.

Various Classes of Elementary Schools.

52. Elementary Schools may be divided into the following classes:—

(*a.*) Government Schools maintained from Provincial funds, under which head come—

(1.) Elementary Taluq Schools.

(2.) Hill Schools of Ghoomsur and Pedda and Chinna Kimedy.

(3.) Elementary Government Schools for Mahomedans.

(4.) Government Schools in the Bhadrachellum and Rekapally Taluqs.

(5.) Yenadi School, Sriharicottah.

(6.) Pensioners' School, Tripassore.

(*b.*) Local Fund Schools on the combined and other systems.

(*c.*) Municipal Schools on the combined and other systems.

(*d.*) Schools aided on the salary grant system.

(*e.*) Schools aided on the results system.

(*f.*) Schools aided on the combined system.

(*g.*) Unaided Schools.

Girls, as well as boys, are admitted into nearly all these classes of schools. No schools will therefore be excluded from this section on the ground that they are mixed schools. The statistics of results schools will, as usual, include all results schools. No separate account will be given of the few schools which still remain under the salary grant system. The unaided schools are chiefly schools which are expecting grants on the results system. These will be noticed when they have been examined under the standards, although the grants earned may not have been actually paid within the year.

Besides the schools above mentioned, there are the Jail Schools and the Army Schools. These are under inspection, but furnish no returns to this department.

Elementary Taluq Schools.

53. There ought to be no elementary Taluq Schools, but there have always been some schools of this class. At the commencement of 1876-77 there were six elementary Taluq Schools. Three of these, viz., the Taluq Schools of Gunupur, Palmanair, and Kassergode, have become middle-class schools and have been already noticed in their proper place. The Taluq Schools of Ponneri and Kunatur, in Chingleput, and of Cheyar, in Coimbatore, which have long been in an unsatisfactory state, have been abolished under the scheme for remodelling Anglo-Vernacular and Taluq Schools. The only elementary Taluq School at the close of the year was the Taluq School of Chodaveram. Last year this was rather a poor specimen of a middle-class school with an attendance of 50 boys. This year the number has

been reduced to 19 and there is no middle department. This school has for many years been in a languishing state and sanction has been recently obtained for its tranfer to Yellamanchili.

Hill Schools of Ghoomsur, Chinna Kimedy, and Pedda Kimedy.

54. The attendance in the Hill Schools of Ghoomsur, Chinna Kimedy, and Pedda Kimedy has fallen since last year from 849 to 709. Of this number only 30 are in the fourth or highest class against 52 last year. Mr. Kershaw makes the following remarks on these schools.

"These Maliah Schools remain the same as last year. The number of pupils has declined somewhat. This is chiefly due to the fact that a large number of young men, whose names had been on the rolls for years, but who learnt nothing, have been struck off and the maximum age of pupils now limited to 16 years. The young men who have been struck off the rolls attended but fitfully, and that only under the belief that their attendance was compulsory. I visited six of these schools in January, but was not very well satisfied with the result of my examination; the fault in my opinion being due in great measure to the neglect of duty by the Superintendent of Hill Schools, who has since been punished by a reduction of pay. I had intended visiting the remaining ten schools, but was obliged to leave them to be inspected by my Deputy, as I was directed to proceed to take charge of the 4th and 5th Divisions."

Elementary Government Schools for Mahomedans.

Schools.	Pupils on the 31st March		Condition.
	1876.	1877.	
Rajahmundry ...	50	29	Indifferent.
Ellore ...	50	50	Good.
Masulipatam ...	41	24	Fair.
Adoni ...	33	20	Good.
Cuddapah ...	23	28	Indifferent.
Kurnool ...	45	15	Do.
Vellore ...	72	53	Not inspected.
Arcot ...	52	44	Do.
Trichinopoly ...	65	56	Do.
Nagore ...	56	66	Do.
Total...	487	385	

55. It will be seen from the statement in the margin that the attendance in the ten Government Schools for Mahomedans has fallen from 487 to 385. The decrease seems due to the famine. Four of these schools have not been inspected. Three are in an indifferent condition. The other three are in a tolerably satisfactory state. In some of these schools matriculated masters have taken the place of the incompetent teachers who were formerly employed, and in course of time it may be hoped that most of these schools will become middle-class schools. Sanction was granted in December 1876 for the establishment of a Mahomedan school at Chittoor, but a Headmaster was not appointed until after the close of the official year.

Elementary Government Schools in the Bhadrachellum and Rekapully Taluqs.

56. There are five elementary Government Schools under the control of the Collector, at Bhadrachellum, Dummegudem, Waddigudem, Marrigudem, and Kunavaram. Mr. Kershaw visited all these schools in October, except the one at Marrigudem, which was closed for want of a master. He found them all in a miserable condition and made various suggestions for their improvement. The Bhadrachellum School is to be made an Anglo-Vernacular School. There was some difficulty about disposing of the Headmaster, who knew no English, but he died soon afterwards, and a trained Matriculate has been appointed Headmaster with a trained fifth-grade man as Second Master. A certificated master on Rupees 15 is to be sent to Waddigudem, the present master being retained on Rupees 10. The Dummegudem School is to be abolished as a Government institution and the amount expended on it is to be transferred to the Church Missionary Society, which has a school at Dummegudem on the results system. The Kunavaram School, which seems scarcely worth maintaining, is to be allowed another year's trial. The main difficulty under which these schools labour is the want of qualified teachers. The climate is so unhealthy that men cannot be easily induced to accept posts in this part of the country, and the only satisfactory arrangement is to train a few natives of these tracts for future employment as schoolmasters. Four young men have accordingly been sent to the Normal School of Nursapore, and will eventually, when qualified, return to their villages as teachers in these schools. The attendance is nearly the same as last year, viz., 110 against 104.

Yenadi School, Sriharicottah.

57. In my last report I mentioned that the Yenadi School at Sriharicottah was closed, and that it was doubtful whether there would be any use in attempting to set it on foot again. The master has been recently allowed to retire on a gratuity, and there seems so little prospect of any thing being made of this school that I have recommended its abolition. This has been recently sanctioned.

Pensioners' School, Tripassore.

58. Mr. Fowler inspected the Pensioners' School, Tripassore, in October and found 15 out of 22 children present. They were very backward. The irregularity of the attendance was ascribed to want of clothes and the need the parents have for their children's services, some of them not being able to afford to keep servants. This school has been doing very little good for many years, and there seems little prospect of any improvement.

Local Fund Schools.

59. The following statement shows the distribution of Local Fund Schools of the lower class at the end of the year as compared with the previous year :—

District.	Circle.	Lower Class Local Fund Schools.		Pupils.		Remarks.

The increase in the number of schools and pupils, although considerable, is not so great as it was last year. The Division which shows the great advance is the first, to which more than half the schools

and nearly half the pupils belong. The 4th Division shows some increase, the 3rd Division has remained nearly stationary, the 2nd Division has gone back, while in the 6th Division this class of schools is nearly extinct and entirely so in the 5th Division. It has been hitherto understood that the curriculum of these schools was to be limited to the third results standard, but Government have, in their Order, No. 1744, of the 28th September 1876, stated that they "will not object to the inclusion of English in the list of subjects taught and to the extension of the plan so as to include the fourth standard, if the Local Fund Boards so desire and if arrangements are made for securing fees from those who participate in the higher teaching." There is no doubt that the old curriculum was far too circumscribed for even a village school. It will be observed that a very large proportion of the schools now in operation are on what is called the combined system, under which the teachers receive both monthly salaries and periodical results grants. As explained in my last report every Local Fund Board works this system on its own plan, and the only feature which the combined schools can be said to have in common is their great expense. Mr. Fortey makes the following remarks on the Local Fund Schools of the Nellore District which are not on the combined system.

"The 26 Local Fund Schools were most of them opened at the time that the Government proposed to create a system of 'Union Schools' throughout the Presidency. Fourteen of them are in the principal Division and 12 in the Ongole Range. Amongst the masters in the former there is a sprinkling of passed men, but of the teachers in the Ongole Range one only possesses a certificate. I am not an advocate for the multiplication of schools of this kind, unless they can be officered by masters who have received some training or education, for such schools cost the Boards much more than those which are aided under the system of results grants, and I doubt whether they are much more efficient."

Mr. Fortey is strongly opposed to the combined system as carried out in Kurnool, and his comments on it seem to deserve more attention than they have hitherto received.

"The number of pupils passed in the Kurnool and Cumbum Ranges is so small as to be almost insignificant. The Deputy Inspectors in the Kurnool District are engaged almost exclusively in the management of the Boards 'Combined' schools and devote but little time to the improvement of the other village schools.

* * * * * * *

"Some years ago the Kurnool Local Fund Board determined to convert a large number of the village schools into government schools and having obtained sanction for the experiment accomplished their object in the following manner:—The villages which were to enjoy this privilege having been fixed upon, the schoolmasters were asked whether they were willing to become government employés on fixed salaries and teach the subjects prescribed by the Board. In most cases the conditions were accepted and

thus a large number of government schools came into existence. I may remark that none of the teachers had passed the 5th grade examination or any other educational test and that in the majority of instances the schools thus converted had not even earned results grants. I have shown in former reports that this scheme, as might have been anticipated, was a failure.

"At the beginning of the year under review the abovementioned schools were converted into schools on the 'Combined system' in the following way:—The salary of each schoolmaster was reduced by one rupee per mensem and as a compensation he was allowed to earn what he could under the system of 'payment for results,' the rates allowed being, however, only one-fourth of those sanctioned by Government and given to masters who receive no fixed salaries; and it is on the results of the combined system *as tried in this way* that I am about to remark.

"In the first place it is clear that these are in no sense private schools and that the management of them involves a large amount of correspondence which has no existence in the case of private schools. The appointment of masters, the grant of leave, the scrutiny of returns, &c., are matters which devolve on the Deputy Inspectors; but in most cases they have to refer to the Board, for they *recommend* only and the Board *sanctions*, and thus there is much writing in connection with these schools.

"The number of pupils on the rolls of these schools on the 31st of March last was 2,370 and the cost to Local Funds (adding the grants *sanctioned* to the fixed salaries paid) Rs. 11,823 or about Rs. 5 per head. Of these 2,370 pupils the number who passed under one or other standard was 603, so that the cost to the Board per passed pupil was Rs. 19-10-0.

"Now the table attached to para. 80 above shews that under the system of payment for results, the cost to Local Funds per pupil passed is Rs. 4, so that in the 'combined schools' the cost of each pupil taking passed and unpassed together is considerably higher than that of *passed* pupils in the aided village schools, and if account be taken of only the *passed* pupils in the combined schools their cost to Local Funds is very nearly five times that of passed pupils in the village schools.

"Lumping the 'combined' and results schools in the Kurnool District together and comparing the total number of pupils passed and the total cost with the same heads in other districts we have—

Name of District.	Number of Pupils in 'Combined' Schools and Village Schools under inspection on 31st March 1877.	Number passed under the Standards.	Total of fixed salaries paid and Results Grants sanctioned for 1876-77.
			Rs.
Bellary	6,717	2,460	8,338
Cuddapah	5,658	1,403	7,196
Nellore	5,089	1,547	6,287
Kurnool	3,331	1,031	13,452

"A mere inspection of this table will shew how injuriously the interests of primary education in the Kurnool District are affected by the existence of these 'combined' schools. The one point in which Kurnool appears to have the advantageis in the higher proportion of the passed pupils to the

whole number. But even this is due to the 'combined' and results schools being taken together, for of the 2,370 pupils in combined schools 603 only passed, or a smaller proportion than in the village schools in that or any other district.

"It has been stated that the 'results' system has had an injurious effect in lowering the fee collections of the village schoolmasters, but a reference to the table attached to para. 14 will show that these schools are infinitely more self-supporting than the 'combined' schools, and by consulting the returns sent to your office you will see that the receipts of the schoolmasters from "fees and other sources" is generally three or four times the amount of the Government grant.

"Another charge brought against the results system is that the schools thus aided are wanting in permanence. This is no doubt true, but I doubt if the 'combined' schools are much more stable, for in the Kurnool District, where the bulk of the schools are of this class, the decrease in the attendance has been much greater than in any other district of the Division and 24 'combined' schools have been closed in 12 months.

"Of course, the condemnation of the 'combined system,' as carried out in Kurnool, does not imply that it may not be a success if tried under other conditions; but I am not aware that in any district this system has been proved to be superior to the system of payment for results hitherto in force, and as the return to the old system from the new, involving as it does the stoppage of fixed salaries, is a very awkward step, I do think that great caution should be shown in trying this experiment."

Mr. Duncan makes the following remarks on the Local Fund Schools of the Cuddalore Circle:—

"The 44 Local Fund Schools were attended by 1,681 pupils, taught by 63 masters, each master having an average of 27 pupils. All, except two of these schools, were working on the combined system. The results of the examination of the pupils of these schools is pronounced to be 'decidedly satisfactory.' No instruction is given beyond the third standard in these Local Fund Schools and English is not taught during school hours.

"The Deputy Inspector says financially the Local Fund Schools are more expensive than Results Schools, as will be seen from the following items:—

The charges on the 44 Local Fund Schools during the year	Rupees	8,017-9-3
Deduct amount of fees realized during the year	„	1,793-8-0
Net charges on the 44 Local Fund Schools	„	6,224-1-0
Cost of maintaining one Local Fund School	Rupees	141-7-4
Again the charges on the 296 Results Schools for which grants were sanctioned from Local Funds during the year	„	8,019-8-0
Cost of one Results School	„	27-1-6

Thus one Local Fund School costs more than five Results Schools.

"But it should be remembered that Local Fund Schools are far superior to Results Schools in many respects, the following being the chief advantages which Local Fund Schools have over Results Schools:—

1st.—They are permanent and are not subject to be closed or opened according to the whim of the manager or teacher.

2nd.—The course of studies prescribed for Local Fund Schools is regular and uniform.

3rd.—In Local Fund Schools the school hours are regulated as in Government schools, and consequently a more regular and punctual attendance of boys and masters may be secured.

4th.—The teaching is more systematic, the masters being a better set of men and better controlled than Results schoolmasters are.

5th.—These Local Fund Schools serve as models for other elementary schools in the Circle.

6th.—The Local Fund Schools are better supplied with black-board and other school apparatus."

In Madura, schools on the combined system are not regarded as Local Fund Schools, as will be seen from the following extracts from Mr. Bickle's report:—

"The four schools of this class that remained at the close of 1875-76 were converted in the course of the year into those aided on the combined system.

"The subjoined table shows the distribution of these schools according to the Inspecting schoolmasters' Ranges:—

Ranges.	No. of Schools open during the year.	No. closed before examination.	No. closed after examination.	No. remaining 31st March.
Madura	12	5	3	4
Shivagunga	8	4	2	2
Ramnad	10	3	3	4
Total .	30	12	8	10

"The Deputy Inspector thus reports on these schools:—' Thirty-one villages were selected for these schools. In five, no schools were opened, owing, first, to the want of teachers in the villages qualified or willing to do the work, and, secondly, to the insufficiency of the pay for new teachers to be sent thereon. I succeeded in opening 26 schools, and took the four Local Fund Schools under the system. Twelve schools were closed after a short existence and one was not examined, the school having been temporarily closed on account of cholera during my visit to that quarter. Eight schools disappeared after examination, and the number remaining on the 31st March was ten, nine of which were examined and one not. The results of the examination were not at all satisfactory, only three schools having secured more than the amount of the salaries paid. The details of the system in this circle are these:—The teachers were to receive salaries (varying from Rupees 3 to Rupees 5) till they presented the scholars for examination, and the salaries were to be deducted from the results grants earned. This happened only in the case of three schools. Where the results grant did not come up to the amount of the salaries, no grants were

to be paid to the teachers. This system is different from what prevails in many Circles. (Vide para. 111 of Public Instruction Report for 1874-75.) The experiment has failed here, and the Local Fund Board have resolved to discontinue the system from the 1st April. The cause of failure is this:—When people see that the teachers get money from Government, they at once take for granted that education is given *gratis*, and refuse to pay any fees. Any restriction regarding fees would only reduce the number of schools under inspection. On the other hand, the proposed salaries fixed with reference to the probable number of boys to be presented for examination, were too small to support the teachers. Many schools have thus dwindled away after several trials."

* * * * * *

Dindigul Circle. "*Schools on the Combined system*:—There were 9 schools of this class with 253 pupils at the close of 1875-76, while there were only 7 schools with 174 pupils on the 31st March last. The Deputy Inspector thus notices these schools:—'I take this opportunity to bring to your notice that these schools in this circle are not of the kind in other districts. The teachers here are simply paid an advance of the amount they earn at the Deputy Inspector's examination, in the shape of monthly pay, for the whole of the pay they draw is deducted from the results their boys earn. These schools are generally located in places where education has made but little progress. The teachers in these localities find it very difficult to collect even a fair number of boys who might be the means of getting them a sufficient income. They leave the villages when they find that what they have drawn as salary is nearly equal to, or more than, the expected results grant; and I have found it no easy task to fill their places, as competent men do not like to undertake the work in such villages on such terms. I should, therefore, pronounce the system, as it is a failure in this circle.'"

Some of the Local Fund Schools are attended by a few girls. Last year, out of 19,755 pupils, 111 were girls. This year, out of 24,573 pupils, 659 are girls.

Municipal Schools.

60. The number of Municipal Schools has risen since last year from 41 to 69 and of pupils from 2,699 to 3,919:—

As is the case in other elementary schools, a few girls attend some of these schools. Last year the number was 17. This year it is 38. The increase in the number of Municipal Schools is mainly owing to the opening of a large number of new Municipal Schools at Madura Trichinopoly, and Srirungam. At Madura the schools are very costly and have done very little good. The Trichinopoly Municipal Schools are under an Inspecting Schoolmaster, but the masters instead of receiving fixed salaries are paid on the combined system, which is also in force at Srirungam and in some of the schools at Salem. The following account is given by Mr. Fortey of the once flourishing Municipal Schools at Nellore :—

"The 10 Municipal Schools were assembled in the large hall of the Free Church Mission and examined in competition with one another. The whole number of pupils present was 360. The following is an extract from my report :—' On the whole I cannot say that I think the condition of these schools is satisfactory. About one half of the pupils present were included in the lower section of the lowest class. Of these, none could read their own language with any facility, and only a few were able to read at all. The masters seem to think that little boys have plenty of time before them and can afford to waste some of it, and instead of boys being promoted into the higher division of the class after six months' study, as they might be if carefully taught, they are allowed to remain for an indefinite time in the lower division. I found that many had been in it for 15 months or more. The schools are under the charge of an officer called the Municipal Educational Overseer, who is paid Rs. 20 per mensem to attend to them. I found this arrangement work badly, for the man in charge of the office seemed to me not to have done, or to be capable of doing, any thing for their improvement, and as he had not been directed to

(a) 5 on the combined system.
(b) Schools on the combined system.

work under the orders of the Deputy Inspector, the latter officer was relieved of all responsibility in regard to them."

It is to be regretted that both at Madura and at Nellore the Commissioners have shown a disinclination to avail themselves of the co-operation of the Deputy Inspector and a disposition to trust entirely to an inferior officer of their own. That this is not the intention of Government is evident from Government Order, No. 1364, of the 31st July 1876, which states that in Municipalities the Inspecting Schoolmasters are to act in all cases under the general supervision of the Deputy Inspector.

Working of Results Grant system in each District.

61. The following table shows the working of the results grant system in each district. The attendance in aided schools has risen from 132,505 to 160,218, exclusive in both cases of the attendance of schools which received grants during the year but which were closed before its expiration. The number of unaided schools preparing for results grants has fallen from 4,362 with 87,014 pupils to 3,776 with 74,368. As Government in reviewing the report of last year requested that some explanation should be given with regard to the large number of schools which always appear under this head, I may state that the term unaided includes two different classes of schools. A school when brought under improvement may be unaided for some time, because it is not yet prepared to undergo the necessary examination, or because the Local Fund Board or Municipality has not yet recognized its claim to be placed on the list of schools to be examined. A school is also shown in the returns as an unaided school if owing to any cause it has not received the grant which it has earned during the official year. In such cases the unaided school of one year may become the aided school of the following year. Taking aided and unaided schools together, the attendance has risen from 219,519 to 234,586. It will be seen from the statement given in the margin that there has been a large increase in the expenditure on results grants both from Provincial and from Local Funds, while the grants paid from Municipal Funds have remained nearly stationary. Some Municipalities have set their faces against an annually increasing provision for this purpose, and other Municipalities consider that, as they have Municipal Schools of their own, they are not bound to spend any money on results schools.

grants during the year but were closed before its expiration.

Summary of Results Grants for each Division.

62. The preceding table may be summarized as follows for the six educational Divisions.

Divisions.	Number of schools aided.	Attendance.	Grants paid.			Average grant per school.		
First ...	1,284	25,971	56,388	4	..	43	14	8
Second ..	837	11,791	23,638	1	...	26	11	4
Third ...	1,050	27,361	48,658	8	2	46	5	6
Fourth ...	943	26,595	52,588	2	...	55	12	3
Fifth ...	1,853	47,644	94,366	10	2	50	12	8
Sixth ...	476	20,856	32,228	...	...	67	11	4
Total ...	6,498	160,218	307,917	9	4	47	6	2

The results system has reached its fullest development in the 5th Division, but the 6th Division, which has some very large schools aided on the results system, shows the highest average grant. The second division has by far the smallest attendance, and the low average grant attests the inefficiency of the schools.

Number of Pupils passed under each Standard.

63. A statement will be found in the Appendix showing for each district and division the number of pupils who passed under each standard. The following is a summary of the figures for the whole Presidency.

—	Standards.	Number of schools that passed Pupils.	Number of Pupils presented for examination.		Vernacular.					English or extra Language.			Needlework.
			Boys.	Girls.	Number of Pupils who passed in Reading.	Number of Pupils who passed in Writing.	Number of Pupils who passed in Arithmetic.	Number of Pupils who passed in Grammar.	Number of Pupils who passed in Geography.	Number of Pupils who passed in Reading.	Number of Pupils who passed in Writing.	Number of Pupils who passed in Grammar.	
6,952 schools passed Pupils.	I.	6,469	44,739	3,549	32,777	35,693	33,613	...	...	...	...	...	1,169
	II.	5,165	29,125	1,938	21,372	23,354	20,309	...	...	...	...	...	777

		Total...	95,494	6,967	69,972	77,866	66,016	6,429	9,071	3,345	3,637	844	2,596

There has been a considerable increase in the number of pupils presented for examination. The number of pupils passed is as usual large under all the standards for Reading and Writing and also in Arithmetic in all but the fourth standard, which is evidently pitched too high as it has always proved a stumbling block. The result of the examinations in Vernacular Grammar, Geography and English does not call for any special remark. The number of girls who passed in needlework is shown for the first time.

The following table shows the number of pupils who passed in Reading alone, in both Reading and Writing, and in Reading, Writing, and Arithmetic.

Divisions.	Presented for examination.		Passed in		
	Boys.	Girls.	Reading alone.	Both Reading and Writing.	Reading, Writing and Arithmetic.
First	16,579	628	738	2,819	8,198
Second	9,649	311	373	1,612	4,477

Sixth	9,284	931	216	1,114	5,702
Total ...	95,494	6,967	3,665	13,849	49,487

Financial difficulties connected with the working of the results grant system.

64. There have always been financial difficulties connected with the working of the results grant system. The funds available for aiding results schools are limited. The demand for such grants is practically unlimited. The following illustration of these difficulties is taken from Mr. Garthwaite's account of lower class schools in the Calicut Circle. "Of the Hindu indigenous schools, more than half were not examined owing to funds for grants not being available. The Deputy Inspector reports instances in which the schoolmasters in want of their usual grant were obliged to go and work as coolies."

Revision of the Rules for Results Grants.

65. The revision of the rules for results grants has been under discussion for some years. In December 1875, I submitted a report on the subject, with a set of draft rules, under which it was proposed to make considerable alterations in the existing system. In October

1876 the whole question was reviewed by Government. Some of the changes recommended were approved. Others were disallowed or allowed only in a modified form. After stating their opinion on the various points under discussion, Government requested me to revise the rules in accordance with the views expressed by them. They at the same time intimated that they wished to see a considerable extension of the combined system and deemed it desirable that some general principles should be laid down for the guidance of officers concerned in bringing this description of schools under aid or in establishing new schools on this system. In January 1877, I submitted a revised set of rules for results grants, and the rules were passed with some further modifications soon after the close of the official year.

Mappila Schools.

66. It will be seen from the following extract from Mr. Garthwaite's report that Mappila education in Malabar has sustained a check.

" The subject of Mahomedan education has a peculiar interest in regard to the 6th Division, that being especially the Mahomedan Division of the Madras Presidency, as it contains more Mussulmans than any other Division and more than one-third of the total Mussulman population under the Madras Government. I mention these facts in explanation of the submission of Table III relating to the condition of Mahomedan (Mappila) education.

TABLE III.

| Years. | Calicut Circle. | | |

"From the above figures, it will be apparent that the progress of Mappila education has sustained a check. This check is owing to the action of the Malabar Boards(due partly to the want of sufficient funds and partly to the pressure of Government) in reducing both the stipends formerly given to the Mappila Mullahs and the amount at disposal for result grants to Mappila schools. The stipends in a great measure went to pay for the services of Hindu teachers, the Mullahs themselves being generally incompetent to teach any thing but Arabic reading and that only the Kuran. But when the stipend was reduced from Rupees 4 to Rupees 2, it became insufficient to secure the services of a teacher, and without a teacher no grant could be earned. There was moreover a threat that the stipends would soon be wholly withdrawn. Hence some schools were closed, others withdrawn from inspection, and at others the attendance was allowed to fall off. And the check thus given may be considered to have only commenced to operate when the above returns were collected. There is a danger that, unless the confidence of the Mullahs be restored, there will be still further retrogression in Mappila education. Of course it is open to Government to say that no special efforts need be made in regard to Mappila education. But it is certain that without special effort the Mappilas will remain as they are now, ignorant amidst a population that is being educated, and dangerous in proportion to their ignorance. And if, on the other hand, there is to be special effort, the fact must be recognized that special effort means extra expenditure. The Mappilas will not come as a rule to the Hindu schools, because they frequent their own Kuran schools, and in those schools, if education is to be introduced, a special teacher is required, and he must be paid or he will not come. Hence the stipend is at present a necessity, and I must say that I deprecate any withdrawal of it for some time to come."

Scheme for the extension of elementary education.

67. No further action has been taken with reference to the scheme for the extension of elementary education referred to in para. 99 of my last report. The year has not been a propitious one for the discussion of projects involving additional taxation, and without more money very little can be done.

Army Schools.

68. Before quitting the subject of elementary education, I may refer briefly to two classes of schools which are under inspection, but which furnish no returns to this department, and which do not appear in any form in our statistical tables. The schools of the Native Infantry Regiments noted in the margin were inspected during the year, and copies of the reports submitted by the Inspectors were forwarded to the Adjutant General for the information of His Excellency the Commander-in-Chief. Schools of this class have hitherto been generally in a more or less unsatisfactory condition, but a scheme for their re-organization was sanctioned in 1875 and eventually they will be placed under the charge of masters who are being trained in the

37th Regiment N. I.

Normal School at Bangalore. When the re-organization is thoroughly effected, the Inspectors of schools will be relieved of the duty of visiting these schools, a duty for which they have no leisure.

Jail Schools.

69. In 1874, Government desired that the inspection of Jail Schools should form a part of the regular duties of the Inspectors of schools. During the year under review, reports were made on the Jail Schools at Rajahmundry and Cuddalore by Mr. Kershaw and Mr. Fowler, and copies of these reports were forwarded to the Inspector General of Jails. In March 1877 Government reviewed a report submitted by that officer on the 3rd July 1875 and observed that education had made but little progress in Jails. They remarked that no information had been furnished as to the effect which its introduction had had upon prison discipline and considered that the time devoted to instruction should be increased, that a competent teacher should be entertained in each Central Jail to train convict teachers, that the Central Jail Schools should be inspected by the officers of this Department twice a year if possible, and that full effect should be given to para. 267 of the Jail Rules, which provides for the establishment of Jail Libraries. The following extract from Mr. Kershaw's report on the Rajahmundry Jail School shows the conclusion at which the Superintendent of the Jail has arrived on the success of this experiment.

"Dr. Bilderbeck considers that the introduction of this daily hour of instruction has had a beneficial effect in various ways upon the convicts. When it was first introduced he had strong prejudices against the measure, but these feelings have given way to equally strong feelings in its favour, his experience during the last three or four years showing that, limited as the teaching is and short as the time set apart for it is, it operates beneficially upon a large percentage of the men."

VIII.—Female Education.

70. It will be seen from the table given in the margin that the number of girls' schools has increased by 24, and of girls attending them by 1,768. If to these be added the girls in normal schools and mixed schools, the total number under instruction is 28,151 against 23,793 last year. As usual these figures do not include certain large schools at Madras

supported by His Highness the Maharajah of Vizianagram, which are under inspection, but furnish no returns. The Doveton Protestant Girls' School has been transferred to the list of mixed schools, and owing to a more rigid classification of girls' schools, and the transfer to the lower class of all mixed results schools, the number of middle-class schools is considerably reduced.

71. The Hindu girls under instruction are increasing much more rapidly than any other class. The decrease in the number of East Indians is probably connected with the increase in the number of Native Christians and Pariahs, as the statistics relating to these three classes of the community are not always trustworthy. Among the Hindus, there were only four Ooriya girls against two last year.

72. In the following statement, the schools are classified according to the agency by which they are managed. An abstract of this statement is given in the margin. In reviewing the report for 1869-70, Government remarked that seven-eighths of the female education given in this Presidency was in the hands of Missionary and religious organizations. This is no longer the case, although the proportion of girls in Mission Schools is still very large.

The complete test for the first grade, which includes English and a Vernacular language, was passed by only one candidate, a teacher in the Government Female Normal School. The complete test for the second grade which also includes English and a Vernacular language, was passed by only one candidate, a pupil in the Government Female Normal School. All the other candidates who passed for the first grade brought up only English and therefore received imperfect certificates. Of the imperfect certificates for the second grade sixteen were obtained in English, two in Tamil, two in Malayalam, and one in English. It will be observed that the only schools which passed any pupils for the first grade were the Government Normal School, Davidson Street School and the Wesleyan Mission Mixed School.

The Doveton Girls' School scarcely occupies the position in the list, which might be expected from the only higher class school for girls in this Presidency, and Mr. Fowler's report on his inspection of this school was not very favorable. It is to be regretted that the Northern Circars are wholly unrepresented in this list. Not a single

c. Of these, one is a teacher. d. Of these, two are teachers.

girls' school under Hindu management appears in the list, the girls who attend such schools being usually withdrawn when they are about eleven years of age.

Government Girls' Schools.

75. During the course of the year, two aided girls' schools at Oossoor and Vellore have, at the request of the managers been constituted Government Schools. The Mahomedan Girls' School sanctioned for Gudur has not yet been established. The total number of schools under the direct management of the Deputy Inspectors is therefore eleven, and the attendance in these eleven schools is 519. Mr. Fortey visited the three schools in his division, but the others have not been examined by the Inspectors. At Kistnagiri, a native gentleman named Poongavanam Chettiar has erected a building worth about Rupees 500 at his own expense for the girls' school at that station. At Oossoor, another native gentleman named Neelakuntha Mudaliar has erected a building on his own land at a cost of over Rupees 2,000 and has made it over to Government for the use of the girls' school. Both these native gentlemen have received the thanks of Government for their liberality. Male teachers are still almost exclusively employed in these schools, and many of them are persons of very humble qualifications. Government have however recognized the principle of employing female teachers as far as possible in these schools, and as opportunities occur, young women trained in the Madras Normal School will be sent to take the place of the masters now employed. Besides the schools named in the above list, there is a Government girls' school at Bhadrachellum. Mr. Hope visited the school in February 1876 and considered that it was of little use, and that many of the girls were brought up for the occasion. He accordingly abolished the school in July, but when Mr. Kershaw visited Bhadrachellum in October, he found that the school was still kept up by the former master, who was trying to work it on the results sys-

tem. The school has since been again constituted a Government institution, and at the close of the year there was an attendance of 25 girls, being an increase of two as compared with last year.

76. There were five Municipal Girls' School last year. There are now seven, one having been started at Trichinopoly on the combined system and one on the results system. A fair amount of progress has been made in the schools at Berhampore, but the attendance of the Mahomedan School has been affected in consequence of the Commissioners no longer hiring a conveyance for the use of the children. The Srirungum School is reported by the Deputy Inspector to be still in quite an elementary state, and Mr. Garthwaite after inspecting the Tellicherry Municipal School, was of opinion that it was "a costly failure." No reports have been received on the other schools.

77. In my last report I referred to a question which had been raised as to the propriety of admitting children of the dancing-girl class into schools supported by Government. Government decided on leaving the disposal of the question to the Local Fund Boards. This still left the question unsettled with regard to Government schools, which are not under the Local Fund Boards and Municipalities. From the enquiries made, it appeared that girls of this class had been admitted into four Government girls' schools and that none had applied for admission into the other schools. The decision of Government was that no children of this class under the age of puberty were to be excluded.

Admission of children of the dancing-girl class into Government Girls' Schools.

IX. Professional Colleges and Technical Schools.

78. The number of students who attended the Law Class of the Presidency College was 55 in the second course of 1876, and 71 in the first course of 1877. An attendance of 60 is required to make this class self-supporting, and as this number has been exceeded there is a small surplus this year. It has been already mentioned that seven students of this class passed for the degree of Bachelor of Laws, three in the second class and four in the third. In the early part of the year, the Professor of Law suggested that certificates of proficiency granted

Law Class, Presidency College.

by him after examination to students attending his courses of lectures should exempt the holders of them from the necessity of passing the special test examination prescribed for judicial appointments in the public service. The Commissioner for the Uncovenanted Civil Service Examinations was opposed to the change. There was some difference of opinion on the subject among the Judges of the High Court, but the majority were against it, and Government declined to sanction the proposal. In my last report I mentioned that it was probable that in course of time other law classes would spring up in different parts of the Presidency, and that one such class was already in existence at Trevandrum. No students have as yet passed from this class.

Madras Medical College.

79. The working year of the Medical College differs from the official year, being divided into a winter session of six months, commencing on the 1st October and a summer session of three months, beginning with the 1st April. The following table compares the statistics of the last three years.

Attendance and Results of Examinations.	1874-75.	1875-76.	1876-77.
On the rolls at the commencement of the Winter Session.			
Senior Department	5	12	28
Second Do. Hospital Apprentices.	26	32	33
Do. Do. Female Students	...	4	4
Junior Do. Medical Pupils.	57	68	82
Senior Department.			
Passed Second M. B. and C. M. University examinations.	..	...	...
Passed First Do. Do. Do.	2	...	1
Passed Preliminary Scientific Do.	...	3	2
Second Department.			
Passed for grade of Assistant Apothecary	11	7	9
Junior Department.			
Passed for grade of Hospital Assistant	30	28	26

Of the 28 students who constituted the Senior Department, one was a Lane Scholar, 5 were Government Scholars and 22 were private students, of whom 8 were qualifying for the M. B. and C. M. degree, and 14 were studying for the new degree of Licentiate. This number is quite unprecedented. Of the 33 Hospital Apprentices in the second department, 9 were Military, 16 were Civil and 8 were Singapore apprentices. Of the 82 Medical pupils in the Junior Department, 26 were Military, 34 were Civil and 22 were Mysore pupils. Four of the five Government scholars resigned their scholarships during the course of the year. Among these were two Brahmins. In the second Department, 8 out of 10 students who appeared before the Examining Committee in June 1876, passed, and one was rejected. There was

one whom the Committee felt unwilling to pass because he appeared to them below the mark, although according to the rules in force he ought to have passed. The College Council, to whom the Committee referred the question, were of opinion that he should not be passed into the service, but the matter eventually came before Government, who directed that he should be regarded as having passed. I have pointed out in may last report that the system of marking for this examination is very defective, and the question of revising it is now under consideration. The Committee commented on the reluctance of the students to use quinine in really effective doses, and observed that "while disposed to resort too early to the exhibition of arsenic as an antiperiodic, even this drug they prescribed in almost inert quantities." In the Junior Department 26 out of 28 men passed. On these men the Committee made the following remarks.

"Even though passed, the successful men must acquire much more knowledge and experience before they should be placed in independent charges. Nothing but the urgent need for the services of such men as simply Hospital Assistants induces the Committee to allow these youths to leave College so imperfectly prepared as they are for treating the sick and the wounded intelligently and successfully."

Eight men of the Junior Department were dismissed on the ground of unfitness for the public service.

Surgeon Major Furnell, the Principal of the Medical College, obtained two years' furlough in May and was succeeded by Surgeon Major Dickinson. Surgeon Nanney, Superintendent of the Lunatic Asylum, was appointed Lecturer on Materia Medica with the allowances of a minor Professor in July 1876. Surgeon Major Paul, M. D., Professor of Surgery, whose connexion with the College had extended over sixteen years, retired from the service in November and was succeeded by Surgeon Major Cockerill. Dr. King resumed his duties as Professor of Chemistry in January 1877.

The original course of study prescribed for female students, extended over three years, of which one was to be pre-collegiate, and embraced Pharmacy, Anatomy, Physiology, Medicine, Surgery, Midwifery and the Diseases of Women and Children. In November 1876 the students addressed the Acting Principal requesting that another year might be added to the course with a view to their going through a more complete curriculum. After some correspondence it was decided that the female students should go through the entire course laid down for the Second Department.

In my last report I pointed out the inconvenience of the arrangement under which the labour of conducting all examinations of candidates applying for admission into the Medical College devolved on the Inspector of the Presidency Division. This system has come to an end. In future the examinations will be conducted by the Commissioner for the Uncovenanted Civil Service Examinations.

In May 1876 Surgeon-General Balfour proposed that a corporation should be formed consisting of the Surgeon-General Indian Medical Department, the Director of Public Instruction, the Principal of the Medical College and the Deputy Surgeon-General, with power to confer on private students of the Madras Medical College and of the Medical Schools in the provinces, diplomas or certificates of qualification after examination. Those who had gone through the curriculum of the Second Department were to be styled graduates of the Madras Medical College, and those who had completed the course laid down for the Junior Department were to receive the designation of Licentiate of the Madras Medical College or Licentiate of the Dindigul, or any other Medical School, as the case might be. It was found however that there were a great many objections to this scheme. The immense distinction between these graduates and licentiates and the graduates and licentiates of the Madras University was not likely to be generally understood. There were very few private students for whom these diplomas were required, and if they alone received them, Military and Civil Medical pupils of the same educational standing would be certain to be dissatisfied. No such corporation had been found necessary either in Bengal or Bombay, and there seemed to be no sufficient reasons for exceptional legislation in a matter of this kind. Under these circumstances Government considered that the scheme was one which could not be adopted.

80. The session of the Civil Engineering College begins on the 1st August or a day or two later. The statement in the margin shows the strength of the institution at the commencement of the last three sessions. The following table gives the attendance at the end of each session and the chief features of the working of the institution.

Civil Engineering College.

Departments.		3rd August 1874.	2nd August 1875.	1st August 1876.
First Department		7	9	7
Second do.	First Class ...	29	29	30
	Second do.	65	78	74
Special Drawing Class		39	54	53
Do. Survey Class ...		54	38	27
	Total	194	208	191

Attendance and results of examinations.	1874-75.	1875-76.	1876-77.
First Department.			
On the rolls at the close of the Session	10	8	7
Passed for degree of Bachelor of Civil Engineering.	2	3	3
Obtained certificate as Assistant Engineer.. ...	1	4	4
Do. do. Taluq Overseer	...	1	..
Second Department.			
On the rolls at the close of the Session	63	68	59
Obtained certificates as Supervisor	1	4	2
Do. do. Taluq Overseer	26	24	21
Special Department.			
On the rolls at the close of the Session	75	76	75
Obtained certificates of Surveying, First Class ...	.	...	1
Do. do. Second Class ..	3	2	1
Do. do. Third Class ...	8	11	13
Do. as Draughtsman and Estimator First Class ...	1	.	..
Do do. Second Class...	3	2	3
Do. do. Third Class ...	2	16	10

Of the four men in the First Department who obtained certificates as Assistant Engineer, three also passed for the dégree of B. C. E., one in the second class and two in the third; the fourth failed in surveying. Two of these men, immediately after taking their degrees, obtained employment on famine relief works on the pay of a Supervisor of the 2nd grade.

In the Second Department, 21 out of 28 students passed either as Supervisors or as Taluq Overseers and five failed. The class is described as a pretty fair one, but only three students are stated to have shown superior abilities. In the Survey class, 15 out of 16 students obtained certificates and in the Drawing class 13 out of 21 obtained certificates as draughtsmen and estimators.

The following extracts are taken from the Principal's Report.

"It is much to be regretted that the European Military students, from which class so many valuable Overseers have been drawn, are so few in number, but apparently owing to the opportunities now given them of going home after a few years' service, but few can be found who care to remain in India for the sake of the advantages afforded by a career in the Public Works Department. At the same time I cannot help thinking that Commanding Officers not unfreqnently refuse permission to join the College, to the most eligible men, who from their abilities and character have rendered themselves especially useful in their Regiments or Batteries; this is unfair to the men and detrimental to the Government service, while I very much doubt, if it tends to increase the efficiency of the corps to which the men belong.

* * * * *

"I regret to report that the health of the College has not been so good as usual during the session, and that it can no longer boast of the immunity from epidemic diseases which has characterised it since its establishment. An outbreak of cholera of a very virulent type occurred in January last, to which the wife of our Senior Drawing and Surveying Master unhappily fell a victim after only a few hours' illness; some other members of the same family and one Military student were attacked, but these all fortunately recovered. The College was closed for 10 days, and the quarters in which the cases occurred were carefully disinfected, and thoroughly cleaned and re-painted throughout, and I am glad to say that no recurrence of the disease has taken place notwithstanding its prevalence in the neighbourhood."

* * * * *

"At the annual examination of the Second Department this year, I am sorry to have to report that a very disgraceful scheme was set on foot by some of the students to obtain the examination papers in Drawing and Estimating, which were set for the classes under examination for Overseers' certificates, and for Draughtsmen's certificates.

"The scheme was successful in as far as they obtained from the Government Lithographic Office copies of both the examination papers, as well as one of less importance, viz., the estimating paper of the junior division of the class studying for Overseers' certificates. Fortunately before the examination took place, an anonymous letter warned me of the whole affair, and other papers were substituted. The matter was immediately put into the hands of the Police, who I am glad to say with great expedition discovered the whole matter; though I am bound to say that Mr. Hamilton, the master of the Drawing class found the clue by which the whole plot was unravelled. One of the detectives represented himself to one of the students of the Drawing class as the father of a boy who was going to be examined for a draughtsman's certificate, and actually purchased for 5 Rupees a copy of the paper which had been printed in the Secret Department of the Government Lithographic Press, and from information extracted from this student, he contrived to catch one of the pressmen of the Lithographic Office with one of the stolen papers in his possession. For this, the pressman was tried and sentenced to 6 months' rigorous imprisonment.

"I am sorry to say that, although the scheme emanated apparently from the Drawing class, there can be no doubt from circumstances which have come to my knowledge, that the 1st class of the 2nd Department endeavoured to take advantage of the roguery, and that some of them had obtained copies of the stolen papers.

"Though it is suspected that many of the students were implicated, only three, and those all of the Drawing class have been proved to be guilty.

"These students have been expelled from the College, and application has been made to have them posted in the Gazette, as disqualified for the public service."

* * * * *

"With regard to the future employment of these qualified subordinates, I am afraid there will be considerable difficulty, which is chiefly owing to a very extraordinary system which exists in the P. W. Department and probably in no other, and that is, that the head of the Department has nothing whatever to say to the first appointment of subordinates, notwithstanding that they are highly paid officials seldom drawing a total salary of less than 90 Rupees a month. Each District Engineer appoints his own Overseers whenever a vacancy occurs; sometimes, but rarely, they receive appointments through official application to the College, but they generally obtain appointments by themselves petitioning, or personally applying to District Engineers, and I imagine that under these circumstances the appointments must often go more by favor than merit. I hope that some alteration will speedily be made in a system so detrimental to the interests of the best students of the College. There can be no doubt that the appointments of all Overseers should be made by the Head of the Department. A roll of existing vacancies ought to be sent to me at each annual examination, and I could recommend the successful students for appointments, giving the choice of locality to the most deserving."

"I do not think that any sensible person will doubt that this system will be preferable to that in which a student, who after a lengthened course of study at the College has duly qualified himself for an appointment in the Public Works, should have to wait for employment till he can secure the favor of some individual member of the Department. This method of appointing Overseers will of course not interfere with the principle that Government does not guarantee any appointment to a student because he has obtained a certificate of qualification."

School of Industrial Arts.

81. In August 1876, an Executive Committee of management, consisting of the gentlemen noted in the margin, was appointed to exercise general control and supervision over the School of Arts and to report on the important questions raised by the despatch of the Secretary of State of the 9th March 1876. I am not aware whether any report has been submitted to Government by the Committee. Major Hunt's report for the year, shows that the average number of pupils on the rolls of the Artistic Branch has been the same as last year, viz., 73. The general course of instruction in this department has been the same as last year, viz., free hand-drawing from copies for early students with linear or geometrical drawing, plane perspective, drawing from models and nature, and water-colouring for those more advanced. Only about 12 or 15 students have however devoted any considerable amount of time to their studies and these have made very fair progress. Last year, three scholarships, which were sanctioned for this school some years ago, were for the first time

Mr. R. Orr
Mr. J. Deschamps.

awarded, and it was hoped that emulation would be excited and a greater amount of steady work would be obtained. The improvement effected has however been very slight, and a better class of pupils has not as yet been attracted to the school. Seven or eight lads who have taken up wood-cutting and copper-plate engraving, have made good progress, and two or three have learnt enough to earn a livelihood by their work. Of the Industrial Department, Major Hunt speaks as follows.

"Experiments steadily and patiently carried on by the Foreman, Mr. Dowley, have resulted in the production of really very excellent glazed ware of various colors, dark brown, blue, green and yellow.

"These are lead glazes, and a good salt glaze has not yet been obtained, but as there has been but little time as yet to carry out experiments with this view, any other result could not be expected. During the coming year however there is every hope of arriving at success in this direction as well as in the manufacture of pure white ware and porcelain, which have failed hitherto.

"With no practised hand to aid and direct these experiments, of course they must be tedious, and time must necessarily elapse before the requisite knowledge is obtained, almost by chance in many instances, as books and recipes, it is found, give but indifferent help. Besides the attainments of these glazes, great improvement has been made in the modelling and texture of the articles of pottery and terracotta turned out and a very good stone ware has also been arrived at."

School of Ordnance Artificers.

82. The constitution of the School of Ordnance Artificers and the scheme of study pursued in it, were described in my last report. The following is an extract from a report from the Superintendent of the Gun Carriage Factory on the working of the school during the past year.

"There were 65 students on the rolls of the school during the past year.

"The students of this school being all Artificers and Pupils of the Ordnance Artificer Company, the numerical strength of the school, admissions into and withdrawals from it, arise from the removal of the men from the Gun Carriage Factory to out-station Arsenals and other departments and their re-joining the Factory.

"Eleven Artificers were removed from the Factory to out-station Arsenals, 4 transferred to the Revenue Survey Department for staff employ, 1 to the Gun Powder Factory as a Supervisor, and 1 discharged, and 9 rejoined the Factory, so that there have been 9 admissions and 17 withdrawals.

"The school is intended to raise the men of the Ordnance Artificer Company from mere workmen to superior mechanics, by combining theoretical with practical instruction in mechanics, mathematics and steam machinery. One of the men who was brought up in this school and raised to the rank of a Warrant Officer, was appointed as one of the Mechanical Engineers for the Gun Carriage Factory to fill up a vacancy caused by the

death of a European Mechanical Engineer, 2 were promoted to Warrant grades, 2 selected as non-Commissioned Officers, one was selected as a Supervisor for the Gun Powder Factory, 4 were taken as Surveyors for the Revenue Survey Department.

"There were a few changes in the staff of teachers. One resigned on account of his having been appointed Mechanical Engineer, 2 were selected for the Revenue Survey Department, and 2 were transferred to out-station Arsenals. Their places were filled up by promotions from among the teachers and by selecting as new teachers the best of the Artificers who have gone through the studies of the school and shown an aptitude to imparting instruction to others.

"Considering the short time allowed to the students to attend the school, viz., from 7½ to 9 in the morning daily, and from 6 to 7 in the evening (on two days weekly) and their minds being fully engaged in the work of their respective trades during each successive day, the progress they make in their studies in the school is creditable to them and to the teachers.

"In addition to the monthly allowance of Rupees 300 sanctioned by Government for payment of teachers, a sum of Rupees 98-4-0, was expended during the year on account of contingencies.

"Four Argand lamps, Oil, &c. were purchased for the evening school."

Industrial School, Black Town.

83. Mr. Fowler inspected the Industrial School, Black Town, in July 1876. The following is an extract from his report :—

"The fifty-three boys now in the school are, according to a return submitted to me, thus distributed :—

Learning	Carpentering	17
„	Bookbinding	12
„	Shoemaking	11
„	Blacksmith's work	7
„	Printing	5
„	Medicine-compounding	1
[Acting as Clerk of the school]	... ...	1

"The boy learning medicine-compounding is employed in a Chemist's shop in Madras; the five learning printing work are employed in the Printing Office of the *Athenæum and Daily News*, but they have not, I was informed, been apprenticed.

"The remaining forty-seven are taught the different trades mentioned, on the school premises. For their instruction there was the following staff :—

		Rs.
Superintendent on ...	... ...	25
Teacher of	Bookbinding	35
„	Carpentering	15
„	Shoemaking	15
„	Smith's work	16

"The Superintendent resides on the premises, and has charge and the general management. He purchases the materials used.

"The Bookbinding Department is more complete in its appliances than any other, and the work turned out is well done. I believe, however, that the supply of work is much less than could be executed with the means available.

"The Carpenters' shop is a shed opening on to a yard, and is so hot that, as I was informed, the instructor, a European from a Regiment in Fort St. George, had been obliged to give up the work as he could not stand the heat; there was thus no instructor at the time of my inspection. There was not much completed work for examination. I had, however, a few weeks ago to report on some school furniture, for which a grant was sanctioned, and I found it had all been made at the Industrial School. The workmanship and finish would not discredit any workshop.

"The Shoemakers' shop, under a European soldier, presented a busy and workmanlike scene. Some boots and shoes seemed substantial and well made.

"The Smiths' work I had the smallest means of judging of, as there was nothing in stock. I however, saw some of the boys working pretty vigorously.

"The time for work is from 7 to 11 and 12 to 4. Before 7 the boys have a very plain breakfast; at 11, an equally plain dinner; and a final meal after ceasing work at 4. I should mention that the school is purely a day-school, none of the boys living on the premises."

A return submitted by Mr. Fowler showed that out of fifty-six pupils who had left the institution, twenty-five were gaining a respectable livelihood. The school was however in debt, and in order to reduce the expenditure, the Committee had discontinued the elementary instruction in Reading, Writing and Arithmetic, which was originally given when the school was started. A permanent monthly grant of Rupees 150 has been now given to this institution on condition that elementary instruction in Reading, Writing and Arithmetic shall be re-introduced, and the Committee have, with the permission of Government, taken possession of a portion of the commodious buildings formerly occupied by the Civil Female Orphan Asylum. The number on the rolls at the end of the year was the same as last year, viz., 43, and while the charges amounted altogether to Rupees 9,011-1-0, the receipts from work alone came to Rupees 5,269-10-1. No applications have been received during the year for the establishment of any other Industrial School, and no special measures have been taken in connexion with the industrial education of poor East Indians, beyond those reported in connexion with the Ootacamund Lawrence Asylum and the Civil Orphan Asylum.

School of Agriculture.

84. In my last report I gave a brief account of the circumstances under which Government had resolved to establish a School of Agriculture at Sydapet, and appended a copy of a prospectus in which the constitution of the in-

stitution was fully described. The following extract from Mr. Robertson's report on the working of the school will show that a good beginning has been made.

" Under the orders of Government, this prospectus was published in the *Fort St. George Gazette* and in the local *Gazettes* of this Presidency, and soon after numerous applications for admission into the institution, began to be received from candidates resident in various parts of this Presidency and the Presidency of Bombay.

" At first, it was determined to open the institution in the beginning of October, but various circumstances combined to prevent the carrying out of this intention. Before the middle of September, 43 young men had entered their names as candidates for admission into the College; the whole of these produced the necessary certificates of age, physical fitness, vaccination and character. Of these, 17 were qualified for immediate admission into the institution, having passed the Matriculation and other examinations prescribed. The remainder 26, entered their names as intending competitors at the entrance examination. The entrance examination was held at Sydapet, and at the head-quarters of 2 or 3 districts on the 23rd October; and of the candidates who attended, 12 were selected and admitted into the institution. But, before the institution began its work, a number of the first accepted candidates asked for, and were granted permission to withdraw their names from the roll of the institution, chiefly on account of the famine rendering it impossible in the majority of the instances, for the parents of the youths to bear the additional cost of the maintenance of their sons at Sydapet. For the vacancies thus caused there were, however, numerous candidates, and from the best of those who had passed the Matriculation or other examinations prescribed, and who had produced certificates of physical fitness, &c., I selected men, up to the number I considered sufficient fer the accommodation available. These accepted candidates were as follow :—

" 9 Parsees.
10 Brahmins.
10 Vellalars and other castes.
1 Native Christian.

They belong to the following places :—

3 South Canara District.
3 Coimbatore District.
3 Chingleput District.
1 North Arcot District.
7 Madrás District.
1 Tanjore District.
1 Trichinopoly District.
9 Districts of the Bombay Presidency.
1 Ceylon.
1 Mysore.

—
30
—

"The ages of these men were :—
Nine aged from 18 to 20 years.
Nine aged from 20 to 22 years.
Twelve aged from 22 to 23 years."

Unsuitability of house-accommodation.

"The great difficulty experienced in starting the institution was to secure the necessary accommodation. Eventually it was decided to make use of, as a temporary arrangement, the granary building attached to the Sydapet Experimental Farm. This is a two-storied building and consists of two rooms on the ground floor and one upper room. This building, though very commodious as a granary, is very inconvenient and unsuitable for the purposes of the institution; the height of the rooms on the ground floor is less than 9 feet, and the class room, which is only 30 x 20 feet is therefore exceedingly close and hot, when it contains the usual class of 30 adults. The upper room, used as a lecture-room, is 60 feet long and 20 feet broad, the height of this room to the wall plates is not more than 6 feet, but the roof is open to the ridge plate, which affords better ventilation than is the case with the rooms on the ground floor; but this room is almost as ill adapted for use as a lecture-room as are the ground floor rooms for use as class rooms; when there are, as is usually the case at the Agricultural lectures, as many as 50 adults in the room, it is exceedingly uncomfortable; and, from the narrowness of the room many of the students are necessarily seated so far back from the lecture platform, they not only experience great difficulty in seeing distinctly the drawings made during lectures on the black board, but also occasionally find it difficult to hear the lecture fully. It is impossible to keep the room moderately cool in the hot season, for the walls are exposed fully to the sun, and the windows are altogether without verandahs or shades; and from the room being already dark when the sky is at all clouded, the windows cannot be furnished with shades; and another very serious inconvenience arises from the absence of window shades, in the impossibility of keeping the rain from drifting across the room when there is even only a very slight wind during a shower.

Institution had to be closed in wet weather.

"On such occasions, I have had no alternative but to dismiss the class; for, if the window shutters were closed, the room would be so darkened that no work could be done, while glass windows would render the room too hot. Light as the rains were during the past session, I had on several occasions to close the institution from the impossibility of lectures being delivered in the room while rain was drifting through it. I look upon the absence of proper accommodation in the shape of lecture-rooms and class rooms as a most serious detriment to the work of the institution. Plans and estimates have been prepared and approved for providing the necessary buildings, and the funds required are available. I venture to hope that before the expiration of another year, the necessary accommodation will be provided."

The absence of proper house-accommodation, a serious detriment to progress.

Plans for buildings have been approved.

Holkar State stipendiaryships.

"His Highness Maharajah Holkar, founded two stipendiaryships connected with the institution, each of the value of Rupees 25 per mensem. For these stipendiaryships, two young men were selected and sent to the College by the Minister of His Highness the Maharajah. These young men signed an agreement by which they undertook to serve the Government of His Highness the Maharajah, as Agricultural Instructors, after the completion of their training in the College. The action of His Highness Maharajah Holkar in this matter is highly to be commended; it is greatly to be desired that the example should be extensively followed."

Students studying special subjects.

"The accommodation being so limited, only two or three students could be admitted to study special subjects.

Normal School students.

"Arrangements were made whereby some of the students of the Normal School in Madras, could attend the Agricultural Lectures; of these students, 13 attended. These are Matriculates and First Arts men. They are intended to be teachers in Higher-class, Middle-class, and Normal Schools. Some of them may become masters in schools in which agriculture will form a part of the curriculum.

Numerous applications for admission.

"During nearly the whole of the Session, applications for admission into the institution were frequently received. The following statement shows the number of these applicants, and the District, Province, or Presidency to which they belonged.

Applicants from	Madras District.	31
Do.	Chingleput District...	16
Do.	North Arcot do.	8
Do.	Salem do.	1
Do.	Mysore Province	1
Do.	Tanjore District	30
Do.	Trichinopoly District	2
Do.	Coimbatore do.	9
Do.	Malabar do.	1
Do.	South Canara do.	6
Do.	Madura do.	3
Do.	Tinnevelly do.	1
Do.	Kistna do.	1
Do.	Bombay Presidency	31
Do.	Bengal do.	1
Do.	Punjaub Province	1
Do.	Oudh do.	1
Do.	Ceylon	1
	Total....	145

"The next statement shows the caste or nationality of these applicants.

Brahmins	63
Parsees	26
Vellalars	8
Idaiyars	5
Vanniars	12
Chetties	3
Christians	3
Mussulmans	2
Kammalars	2
Kshatriyas	1
Unknown caste	20
Total...	145

"We were quite unable to accommodate more students, and I had most reluctantly to refuse to admit many apparently very eligible candidates.

"It is a matter of some interest, and I think a very promising sign, the large proportion of those applicants that were Brahmins. The Brahmins are, in the agricultural districts of this Presidency, the leaders of the people, and are much looked up to by the cultivators for advice in the management of land. It may not be generally known that one-quarter of the entire male Brahmin population consists of cultivators, and about 12 per cent. of land-holders; thus more than one-third of the entire male Brahmin population is actively engaged in pursuits connected with the land. The large number of Parsee candidates was also a very encouraging sign. If these enterprising go-a-head people turn their attention to agriculture, much good may be looked for. In many respects, Parsees are particularly well suited to be agriculturists. It is to be hoped that the College may be the means of inducing many of them to devote themselves to agriculture, which sadly needs a little of that energy and enterprise which has been so conspicuously shown by Parsees in commercial and manufacturing enterprises.

"I would particularly invite attention to the numbers of eligible candidates, who from so many parts of India sought admission into the institution. In the earlier part of this report in para. 2, I drew attention to the difficulties experienced, only as recent as 1871, in inducing eligible persons to offer themselves for a course of training in agriculture, even when the inducements offered were of a most substantial character. The change that has taken place in the opinions of the educated youth of this country regarding agriculture as a field of employment, must, I think, be very gratifying to all who desire to see this country prosper.

"The institution did not begin work until the middle of November. A very efficient staff of lecturers was appointed to instruct the students; the majority of these gentlemen, were already engaged in teaching in the Madras Medical College. The subjects of instruction were:

Agriculture.—Soils and Manures.
Veterinary.—Animal Physiology and Anatomy.
Botany.—Elementary.
Chemistry.—Inorganic.
Zoology.—Mammals and Birds.
Arithmetic.—Decimals, Rule of Three, &c.
Mensuration.—Principles of Geometry and Mensuration of surfaces.
Surveying.—Measurement of small areas with the chain.

"On each of these subjects a course of lectures was delivered. The following extracts are from the reports of the lecturers and masters on the work of the past Session.

'W. R. Robertson, M. R. A. C., (Agriculture).

'The class met 44 times; 28 of these meetings were devoted to lectures, 13 to field classes, and 3 to formal examinations.

'The class was composed of 45 members, 13 of whom were students of the Normal School.

'The attendance of the students was very satisfactory. The Normal students unfortunately, owing to their vacation falling during the Session, were able to attend only 2 lectures.

'I was very much gratified with the progress made by the class generally. The conduct of all was good.

'The lectures delivered were generally on soils and manures. At the field classes, attention was chiefly directed to the practical illustrations afforded in the fields to the instructions given in the lecture-room. Owing to the prevalence of the drought, ordinary agricultural work was not so active as usual, but many valuable lessons were learnt as to the means available to the agriculturist for modifying the ill-effects of such unfavorable seasons.'

'G. Western, M.R.C.V.S., (Veterinary).'

'The class met 22 times, and the allotted hour was occupied with lectures, anatomical demonstrations and occasional *vivâ voce* examinations. The class consisted of 30 students.

'I have found the members of the class throughout the Session attentive and eager to learn, and have been agreeably surprised at the very creditable papers written by the majority at the examinations. I must however, I regret to state, except some four or five from this general commendation.

'I have experienced much difficulty in procuring specimens to illustrate my lectures, and fear that in consequence the matter thereof has not always been so well understood as it might otherwise have been. This might be remedied in future by procuring a good selection of anatomical models and diagrams of the more important parts and organs of animals from Europe. For diagrams I have hitherto had to depend entirely on what I could prepare privately or obtain on loan from the Curator of the Government Central Museum, and I am much indebted to that officer for assistance in this respect.

'The instruction hitherto given has been of the most elementary description, my intention being to give a general outline of the structure and functions of the organs of the animals of the farm, and subsequently to reconsider the various branches of the subject in the order of their importance and interest to the agriculturist.'

'R. WILKINS, F.R.C.S. (BOTANY).'

'At the commencement of the Session, there were 16 students in the class; very shortly afterwards the number was increased to 32.

'Lectures on the subject were delivered bi-weekly; the number up to 31st March amounted to 22. They embraced an account of roots, stems, leaves and flowers, and were illustrated by sketches on the black-board and by fresh and dried specimens.

'One oral and three written examinations were held, for which marks have been assigned. In addition to these, the class was examined for a few minutes at a time, at every meeting on the subject of the previous lecture.

'All the students conducted themselves well, and I am satisfied with the progress made by most of them; a few have not done well.'

'W. HAMILTON, (CHEMISTRY).'

'The number of meetings has been 29. Three examinations were held, two class and one sessional. In addition, the students were examined at each meeting, for 20 minutes, on subjects which were considered in the previous lecture.

'The lectures were, as far as practicable, illustrated by experiments.

'At the commencement of the Session there were 16 lads. Fresh admissions were granted from time to time, until the total number on the roll amounted to 32.

'The conduct of the lads has been unexceptionable, and their industry good. Many of the lads in the class are intelligent, and have evinced a fair degree of aptitude in grasping the facts and theories of the subject. A few from defective preliminary training and inadequate knowledge of English have kept far behind the others. About one-half of the class have made good progress.'

'J. KEESS, M.D., &c. (ZOOLOGY).'

'The class met 14 times during the course of the Session and had one oral examination and two written examinations.

'Mammals and birds formed the subject of my lectures. The students exhibited great interest in the subject of Zoology.

'The behaviour of the class has been unexceptionable.'

'A. GANAPATI AIYER, F.A. (ARITHMETIC).'

'The class met 24 times; 22 lessons were given and two examinations held. The portions studied were Decimal Fractions and Simple Rule of Three.

'The class consisted of 28 students.

'The conduct of the class was on the whole satisfactory, and the students with a few exceptions acquitted themselves very creditably at the examinations held during the Session.'

'T. V. SEETHARAM MOODELLY, (MENSURATION AND SURVEYING).

'The class commenced on the 15th January 1877 and met 11 times.

'The subjects taught were: Principles of Geometry and Mensuration of surfaces.

'The Surveying Class met seven times. The work done was only surveying with the chain. The conduct of the class during the Session was good.'

"The cottages on the Farm which were built for the occupation of the Apprentices, have been rented to the students; and, as these cottages were not sufficient for the number of students who desired to reside on the Farm, arrangements have been made for building several more. The original educational scheme did not provide for the residence of the students on the Farm; but it is certainly in every way much more desirable that they should reside there, than in the town of Sydapet.

"A Reading-room has been fitted up for the use of the students, who have made good use of it. The Reading-room is provided with Agricultural News-papers, but not to the extent that is desirable.

"A beginning has been made in forming an Agricultural Museum. A fair collection of grains and pulses has been formed. Several skeletons for illustrating the lectures on Animal Physiology have been received from the Superintendent of the Central Museum, to whom also we are indebted for several stuffed fish of the species found in the Adyar river. Sets of Botanical, Zoological and Mechanical diagrams, as well as some models and two microscopes have been received from the Secretary of State for India.

"A Laboratory is urgently needed; without it the instruction in Chemistry cannot be as practical as is desirable.

"It is to be regretted that the Normal School students were able to attend so very few lectures; the causes were partly from the demands of their own institution on their time having on one or two occasions prevented their appearance at the Agricultural Lecture, and partly, from the difference in the Sessions of the two institutions; the Normal School students having been dispersed very shortly after our Session began, and the new class in the Normal School was formed so late in our Session that I, and the Principal of the Normal School agreed with me, thought that the students could not profit much by attending the Agricultural Lectures, then so near the end of the course, from having missed the preceding lectures. The arrangements for the attendance of the Normal School students at the Agricultural Lectures will require to be reconsidered. Our Sessions are convenient, as regards the agricultural seasons here, and it is therefore very undesirable to alter them; and it is probably as undesirable to alter the sessions of the Normal School. If more satisfactory arrangements cannot be made for the agricultural education of the students of the Normal School, it will become a matter for serious consideration whether it would not be better to impart agricultural information, in a few of the principal schools of the Presidency, by means of men who have gone through the entire course of training at the Agricultural College, either in addition to the means now proposed, or in substitution for them. Perhaps a system could

be adopted something like that of the Science and Art Department at Kensington in conducting technical and scientific education in different parts of England."

The cost of the institution according to the report was Rupees 5,594-13-2. No portion of Mr. Robertson's salary is debited in this account to the school.

X.—Normal Schools.

Madras Normal School.

85. The following statement exhibits the changes that occurred in the Normal Department and Practising School of the Madras Normal School during the year.

Department.	On the 31st March 1876.	Admitted.	Left.	On the 31st March 1877.
Normal	21	27	29	19
Practising	181	64	125	120

Mr. Duncan gives the following account of the working of the institution.

"Mr. Fowler held the annual inspection of this school in December, when eleven students were examined for certificates and all passed, two (graduates) in the first class, and all the remainder (one graduate, three who had passed the First Arts examination, and five who had matriculated) in the second. This result must be considered highly satisfactory as far as the examination is concerned, but not so the smalless of the number who completed the course. With reference to this Mr. Bickle in the annual report on the school says: 'The only unsatisfactory circumstances 'connected with the students were the considerable numbers who either 'withdrew or were sent away before the expiration of the usual period of 'training, and the smallness of the number who sought admission into 'the Institution. The former can only be obviated by refusing to admit 'such candidates as have not made up their minds to go through the 'complete course of training and afterwards to engage in the work of 'education. The numbers who apply for admission will probably increase 'as time goes on, and better candidates will be attracted when it becomes 'more generally known that only trained men will be entertained in 'the department of education.'—This last, I may say, is already the case.

"Sixteen students received appointments from the school during the year on salaries varying from Rupees 16½ to Rupees 100 per mensem. One, a graduate, was appointed to an Assistant Mastership in the Zillah School at

Berhampore, and another, also a graduate, to an Assistant Mastership in the Samasthanam School at Vizianagaram. A third graduate took up the Head Mastership of a large private school under native management on a salary of Rupees 60 per mensem, and all the rest became Assistant Masters either in Government or Aided Schools. The total number of appointments was above the average of recent years, and several applications from the managers of schools, in the Telugu districts particularly, could not be complied with as there were no trained ex-students available. Telugu students are still much wanted.

"The Practising School was examined by the masters and upper students in December. The result on the whole was very satisfactory, only four averages by a single class in a single subject falling below fair, while five single averages reached to excellence. The numbers of the Practising School fell so considerably during the year, that Mr. Bickle considers that the efficiency of the students will be impaired unless the number of pupils to practice upon increases.

"In September last the proposal that the students should attend the lectures on Agriculture at the Government School of Agriculture at Saidapet was sanctioned by Government. Accordingly arrangements were made for them to do so twice a week, and their attendance commenced on the 27th November. Another arrangement for the benefit of the students, viz. to attend at the Presidency College in order to receive lectures on Physiology and Chemistry was also determined on last year, but it has not yet been carried into effect owing to the present want of accommodation at the College."

It has been already shown that the arrangements made for the attendance of the Normal Students at the school of Agriculture have not worked well. The question is attended with some difficulty. The Sessions of the School of Agriculture are fixed with reference to the seasons and cannot easily be altered. On the other hand unless students are secured for the Normal School immediately after the results of the University Examinations are published in February and March, the probability is that there will be great difficulty in getting them at all. The matter is under consideration.

Working of the Mofussil Government Normal Schools.

86. The following statement shows the main features of the working of the Mofussil Government Normal Schools. Owing to the opening of a new Normal School at Tellicherry, the number of Normal Students has risen from 198 to 225, and the strength of the Practising Schools from 691 to 737. Last year fifteen out of sixteen students who had passed the First Arts or Matriculation examination passed in method. This year fifteen out of twenty-one passed in method at the Teachers' Certificate examination. Sixteen out of thirty-three students passed for the fourth grade against 23 out of 45 last year, and fifty-seven out of 117 students passed for the fifth grade against 66 out of 95 last year.

Mr. Kershaw makes the following remarks regarding the Normal School of Vizagapatam.

"I examined the Practising School and noticed the teaching and listened to the criticism lessons of the Normal Students in July. With respect to the Practising School, the classes were far too small to be of any use to the students for teaching them how to manage large classes. There was only one class that had more than 7 boys in it. Practising Classes are universally unpopular. People will not send their boys to be experimented on by Normal Students. I perceive there is the same difficulty with the Practising School at Madras.

"The results of my examination of the Practising School were not very satisfactory, nor was I better satisfied with the teaching powers displayed by the students, most of whom were soon to leave the Institution, and all have now got appointments in preference to untrained men, who would probably make better schoolmasters. I consider that the efficiency of my schools is considerably impaired by the rule which compels me to take an inferior man, because he is trained when better men are available, who must be rejected because they have not gone through this doubtful process of training.

The time selected by Mr. Kershaw for testing the teaching power of the normal students was not a very favorable one, as the matriculated students had been under training for only three or four months. Six out of seven matriculated students passed the paper test in method at the Teachers' Certificate examination, and one who failed was afterwards allowed to undergo the same examination as the students of the Madras Normal School, on which occasion he passed. It will be observed that the four fourth grade candidates failed and that only four out of twelve candidates passed for the fifth grade. During the year thirteen normal students were provided with appointments ranging in value from Rs. 8 to Rs. 20, one opened a results school and four out of five who were waiting for appointments have since received them. As the number of appointments exceeds the number of passed men, it is evident that some men who passed in former years must be included in this list. The Normal Department at the end of the year consisted of 14 men, five of whom were matriculates and 9 were men preparing for the fifth grade. The abolition of the class of men preparing for the 4th grade examination has of course had some effect in reducing the number of normal students.

Mr. Garthwaite makes the following remarks regarding the Normal School of Calicut.

"Of the Calicut Normal School, the Practising Branch is in much resort, as an institution imparting a good middle-class education. It is also doing its work fairly as an instrument of training. It contains 167 pupils and has reached the lower fourth class standard. The students of the highest class of the Practising Department are preparing for the 4th Grade Certificate and General Test examination. The Normal Branch may be consider-

ed to be working fairly. Such defects as there are, are more owing to the students' want of substantive knowledge than to any deficiency in acquaintance with the technical methods of teaching. But in this respect no blame attaches to the Normal School, as on the present system Normal students, except those for the 5th grade, pass their examination in substantive knowledge before being admitted to the Normal School. I have however given instructions that an effort should be made to add to the knowledge of the most backward students, only, however, in regard to what they actually have to teach again. During the year, a class for teachers of indigenous schools was formed; these men are prepared for the fifth grade examination and a practising "Pyal School" has been organized for the purpose of training them in teaching. A small local subscription has been raised to provide a building for this latter.

"The Normal Branch at the close of the year contained fourteen matriculates, one fourth grade man, and fourteen indigenous schoolmasters studying for the fifth grade. The Middle School Practising Branch numbered 142 pupils and the Lower Practising Branch, 25, total 167."

No report has been received from Mr. Garthwaite on the teaching of the normal students who went up for examination this year, nor has he stated whether any of them obtained appoinments. According to the published lists, nine out of thirteen passed in method and two normal students and one pupil of the Practising School passed for the 4th grade. Seven Normal Students were also examined in method in December with the students of the Madras Normal School. Their papers were valued by Mr. Fowler, but no report has been yet received from Mr. Garthwaite on their teaching power, and it is therefore not known whether they have passed or failed.

Of the Mangalore Normal School Mr. Garthwaite speaks as follows:

"There have been changes in the Masterships during the year. The former second master is now Headmaster. At my inspection in December last, I found that in the Practising Branch a fair amount of efficiency had been attained, although there was still considerable room for improvement in several subjects. The Normal Department was not found in a satisfactory state, and I was not able to speak favorably of either the intelligence or attainments of the Normal Students I found under training. The closing of many of the Local Fund Middle-Class Schools of Canara reduced the demand for Normal Students of the upper grades, and they have no longer as good prospects open to them as before. Hence only an inferior class of men now come forward to be trained, and it is with difficulty that a supply of Normal Students sufficient in number and attainments to provide teachers for the Practising School can be kept up. There are eight students of the third grade, five of the fourth grade, and twenty-one fifth grade, together with 157 pupils in the Practising Branch, 110 in the middle-class Practising School and 47 in the lower Practising School."

Only one student appeared for examination in method and one for the fourth grade. Both failed. Six out of ten passed for the fifth grade. This is a miserable out-turn for a school of this grade It

seems very questionable whether a superior Normal School should be kept up for a small district like South Canara in which there are very few middle-class schools. It appears that the supply of trained men already exceeds the demand, and that several trained men are without employment. No appointments during the year have been reported.

Mr. Duncan makes the following remarks on the Normal School of Vellore.

"This school was inspected in the usual manner in August when there were on the rolls 25 Normal Students and 129 pupils in the Practising School. Of the former, 23 were examined at the general examination for certificates and all passed, eleven for the fourth grade, three of whom were ranked in the first class; and twelve for the fifth, ten of whom were placed in the first class, an exceptionally good result reflecting much credit on Mr. Joseph, the Headmaster. The pupils of the Practising School did fairly well both in the English and in the Vernacular branches of the examination.

"The only unsatisfactory feature apparently in connection with this school is the smallness of the number of students who actually become teachers compared with the number sent out. From the return furnished by the Headmaster, only five students of this school found employment as teachers during the year, three as Assistant Masters in established schools on Rupees 15 per mensem, and one as Headmaster of a Result School on Rupees 7 per mensem, one set up a Result School in South Coimbatore on his own account. Of the unemployed ex-students some are returned as 'waiting for employment,' while of others it is stated 'nothing is known.' The real cause of so few men of the stamp turned out by the Mofussil Normal Schools proceeding to teacherships seems to be that there is not the demand for them now that there formerly was, while they dislike risking their time and trouble in attempting to establish Results schools on their own behalf. Mr. Fowler says:—'My own experience 'is that both fourth and fifth grade men are ready to accept almost *any* 'appointment; but as a matter of fact untrained matriculated men are so 'numerous that they also are ready to take up the same appointments that 'fourth and fifth grade Masters formerly almost exclusively commanded and 'they often obtain them What all draw back from is starting village 'Results Schools on their own account; and there is no difficulty in under-'standing this. The monthly receipts in the shape of fees are small and 'fluctuating, while the annual grant is subject to various contingencies.'

"Mr. Fowler reports very favorably on all the masters of the schools."

The following account of the Normal School of Trichinopoly is extracted from Mr. Duncan's report.

"An inspection of this school was held in October. The Normal Students were tested in the usual manner, and the Practising School was fully examined. With the teaching of the students Mr. Fowler expressed himself as pretty well satisfied, but 'in two of the lessons too much time was 'taken up with spelling.' Two other faults also were common, namely; 'repetition till it became tiresome; and petty interference with boys.

In the Certificate Examination held in August, nine fourth and nineteen fifth grade students were presented for examination. Of the former, only four passed, all in the second class. Of the latter, sixteen passed, two in the first class, and the rest in the second. These results compare unfavorably with those achieved by the Vellore Normal School; for the fourth grade they are decidedly poor, but for the fifth they may be regarded as tolerably creditable. During the official year, twelve students of this school obtained employment as teachers on salaries varying from Rupees 5 to 15 per mensem and nine others in the month immediately preceding its commencement. Four out of the twenty-one students are stated to have set up schools on their own account and two others to have since left.

"The Practising School which contained 131 boys at date of inspection, fell somewhat below fair on the whole in the examination in some subjects, particularly in the spelling of the higher classes which was decidedly weak. Owing to the superior attractions of the Mission School close by the number of boys' names on the rolls was reduced to 75 on the 31st March last."

Mr. Kershaw makes the following remarks on the Normal School of Nursapore.

"The subjoined table shows the number of students now under training.

TABLE XXVIII.

	Fourth Grade.	Fifth Grade.
Number of students under training on 31st March 1877	11	29

"I tested the results of the training the students had received, when I visited Nursapore, but as usual I was utterly disappointed with the performances of the students called up to give a lesson. Those who were looking on as critics generally failed to detect the most decided faults in manner, &c. None from this Institution passed in the last Teachers' Certificate examination, as copying among some of the students was detected by one of the examiners and the entire examination disallowed in consequence."

This school has no Practising School of its own, and the Normal students are apparently not allowed to teach any class in the Central School higher than the first. Mr. Kershaw has been requested to endeavour to get this restriction removed. The very defective arrangement under which the Central and Normal Schools were placed under the charge of a man, who was himself untrained, has been put an end to.

Of the Normal class of Russellcondah, Mr. Kershaw writes as follows:

"The primary object of this class is to provide teachers for the Maliah Schools, but its operations have this year been extended by the admission of 6 Uriya youths to enable them to qualify themselves for opening private schools among the Uriyas in the plains. Thus there are now 14

students—8 holding *Hill* stipendiary scholarships of Rupees 4 each; and 6 holding *Plain* stipendiary scholarships of Rupees 3 each. I think it would be desirable to extend the operations of the class still more by allowing the admission of free scholars without stipend. I am sorry to state that no students from this class passed in the late Teachers' examination."

Mr. Garthwaite gives the following account of the Normal Schools of Palghaut and Tellicherry,

"*The Palghaut Normal School for Pyal Schoolmasters* continued during the year to do well. There are 30 men studying for the fifth grade and one man already passed that grade but retained to help in the Practising Branch. 19 indigenous schoolmasters appeared from this school at the late Certificate examination, of whom fourteen passed, two being placed in the first class and twelve in the second. Of the five who failed, four failed by only trifling deficiencies. I was able to report favourably of the teaching power of the above candidates and they secured high marks. When I inspected the school in August last and again in February, I found both branches of the school in very fair condition, although latterly the training of the students had been somewhat slurred over. The school is now housed in a spacious school shed especially designed by me. The money for this was partly raised by public subscription.

"Mr. Lewis, Headmaster of the Calicut Normal School, when lately Acting Deputy Inspector of Schools, had an opportunity of seeing both the Palghaut Normal School and several of the village schools taught by its *Alumni* and appears to have been on the whole favourably impressed by both the one and the others.

"*The Tellicherry Normal School for Pyal Schoolmasters* was opened during the year. It is a sister-school to that at Palghaut. As it has not been a full year in working and has had to contend with great difficulties for want of a suitable building, it would be premature to expect much from it. But Mr. Lewis, who visited it in March last, considers that both the Normal and Practising Branches are doing well for the short time they have been in existence. I availed myself of several opportunities of inspecting the school, while passing through Tellicherry and am of opinion that it is likely to do well if it can only be got into a building large enough to accommodate a strong Practising School. At present there are only 49 pupils in the Practising Branch to practise 30 students, whereas three times that number would not be too many. It is creditable to the Tellicherry Normal School that before it had been a year in existence, it passed five men for the fifth grade, one in the first class. Besides these five men, who are now undergoing training, there are in the Practising Branch, 25 men studying for the fifth grade. All the students at both the Tellicherry and Palghaut Normal Schools are men of the Pyal Schoolmaster class, most of them are men who have actually left situations as teachers in order to be trained."

Government Female Normal School, Madras.

87. It will be seen from the following statement that thirteen students of the Government Female Normal School, Madras, appeared at the last Teachers' Certificate examination and that nine passed, seven of them

being placed in the first class of their respective grades. Four pupils of the Practising School were also examined and two passed. One of the teachers passed for the first grade. These results are very creditable to Miss Spence.

Candidates.	First Grade.			Second Grade.			Third Grade.		
	Examined.	Passed.		Examined.	Passed.		Examined.	Passed.	
		First Class.	Second Class.		First Class.	Second Class.		First Class.	Second Class.

Practising School ..	...	...	...	1	1	.	3		1
Teacher	1	.	1	..	...	...	...	..	...

Fourteen of the students gave lessons before Mr. Fowler in December. He considered that the lessons were on the whole promising. Four other students, who had been recently admitted, were not examined on this occasion. At the close of the year there were 16 Normal students, being one more than last year. Of these, three were Hindus, seven were Native Christians, five were East Indians and one was a European. Two East Indian pupils have obtained situations as teachers on salaries of Rs. 35; one Telugu caste girl has received an appointment of Rs. 20 as a teacher in the Practising School, and a Telugu caste widow, who was dismissed for not making satisfactory progress, has set up a private school.

Since Christmas eight pupils have been sent once a week from the Military Female Orphan Asylum to the Female Normal School for instruction in the theory and practice of teaching. The time table is so arranged that the ordinary work of the Normal School is not disturbed by this arrangement, which is likely to be productive of some advantage to the students sent.

The school was removed on the 1st September from Armenian Street to Vurda Mootiappen Street. The strength of the Practising School has not increased in consequence, as was expected, the number on the rolls being the same as last year, viz., 33. At Mr. Fowler's inspection the children acquitted themselves satisfactorily on the whole.

When Miss Carpenter visited Madras in 1875, she consulted me on the expediency of sending two young women from this school to England for the purpose of studying the system of teaching pursued in English Schools and more especially in Infant Schools. I informed her that Miss Rajahgopaul, the first Assistant Mistress would, probably be willing to go, and that perhaps one of the East Indian students who

had recently passed out with first class certificates might be induced to accompany her, but that no funds were available for the purpose. In September, Miss Carpenter sent me a memorandum stating the conditions under which she was willing to receive Miss Rajahgopaul and an East Indian student. Nothing however came of this proposal, as Government declined to allot any public funds for this purpose.

Aided Normal Schools.

The Church Mission Training Institution, Masulipatam, sent up two students for the fourth grade and fourteen for the fifth grade. Neither of the former passed. Nine of the latter were successful. This is a great advance on last year. Mr. Kershaw visited the Institution in August and heard two lessons given, one by a fourth grade man and one by a fifth grade man. Both the Normal students "acquitted themselves fairly, and some of the remarks made by their fellow students were to the point." On the whole he was more impressed with the Normal Classes than on any previous occasion. The Practising School also passed a fair examination. This institution, it will be remembered, is for Pariahs.

Mr. Bickle gives the following account of the Dindigul Training Institution.

"This school was examined by Mr. Marden in the early part of July last. The Normal Department then contained 55 students, 33 of whom were supported by the Christian Vernacular Education Society, and 22 by the American Mission. Since the previous inspection, a 4th Grade Class had been opened containing 6 students. There were thus at the time of the examination three classes, a 4th Grade Class, a 5th Grade Class, and a Preparatory Class. Thirteen of the 5th Grade Class were shortly to attend the Teachers' Certificate Examination, on which account they were only examined in their extra subject—English, in which they answered well. The other classes did *well* in most of their subjects of examination, and hence the general results of this branch of the Institution were very satisfactory. The Practising School containing 60 pupils divided into 5 classes also passed, on the whole, a very satisfactory examination. Thirteen students were examined for Teachers' Certificates, all of whom passed, six in the first class, and seven in the second, an excellent result. Eleven students were provided with appointments, viz., five on salaries of Rupees 7 each in village schools of the C. V. E. Society, 4 on Rupees 6 each in schools belonging to the Madura American Mission, one on Rupees 7 under the Church Missionary Society, and one on Rupees 6 under the London Mission at Nagercoil."

Mr. Bickle has omitted to mention that one student appeared for the fourth grade, but failed.

The Church Missionary Society's Institution, Palamcottah, was not inspected. Four pupils matriculated against two last year, one out of seven passed for the 4th grade, and ten out of fourteen for the 5th grade. "Seventeen students received appointments as teachers during the year, varying in value from Rupees 7 to Rupees 25 per mensem."

The Sawyerpuram Seminary was inspected in March by Mr. Kershaw, who makes the following remarks: "Generally speaking, I was satisfied with the results of my examination. There is a good staff of masters, and on the whole the teaching seems to be careful and sound. The hand-writing, the execution of the paper-work, and the power of expressing themselves in correct English were considerably above the

average of that of boys in schools of the same standard. The English Grammar was not as good as it should be; but the Arithmetic was the only really unsatisfactory subject. The school-house, furniture, and maps were generally in a satisfactory condition. No set of apparatus has been supplied to the Institution for illustrating the physics taught by the Matriculation class." Ten students went up for the Matriculation examination and nine for the 4th Grade and every one passed. Seventeen out of 23 passed for the fifth grade. Twelve students obtained appointments, ranging from Rupees 5 to 15 Rupees a month in the schools of the S. P. G. Society.

The Sarah Tucker Institution is aided on the results system, and is the best girls' school in the Tinnevelly district. The Normal students who receive scholarships are not examined on the results system, as their proficiency is tested at the Teachers' certificate examination. The standard of instruction has been raised this year and the subjects required for the first and second grades are now studied. Eighteen girls appeared for the third grade and fifteen passed, 14 being in the first class. Sixteen students were sent out as teachers during the course of the year. One of these obtained an appointment of Rupees 20 in Lady Napier's School, Tanjore. The posts to which the others were sent ranged in value from Rupees 2 to Rupees 8.

The Free Church Mission Girls' Day School was not inspected this year, and the Normal Class attached to this school is not noticed by Mr. Duncan in his report. Two of the Normal students appeared for the second grade, but both failed. According to the report of the Mission, two other Normal students passed for the third grade, but their names do not appear in the published list.

Teachers' Certificate Examination.

89. The number of candidates for the Teachers' Certificate examination has of late years greatly increased, and as the examination has been mainly conducted by officers burdened with other heavy duties, there has usually been great delay in the publication of the results. In the early part of the year, Government sanctioned two measures which have enabled me to announce the result of this examination much earlier than usual. Only Normal students were admitted to the last 5th Grade examination. In the case of all other candidates a certificate of having passed the Uncovenanted Civil Service Examination in the Vernacular branch is to be accepted as entitling the candidate to a certificate of the 5th Grade, provided he passes the practical test of giving a lesson to a class. In the case of female candidates there has hitherto been no fee. This year a commencement has been made in the Presidency division, candidates for the first and second grades having been required to pay a fee of Rupees 3-8-0, and for the third grade of Rupees 2. This arrangement has enabled me to

secure the services of a certain number of gentlemen who are connected with aided schools and their employment has been of great advantage. The examination was held in August at 34 stations. The number of male candidates fell from 812 to 350, and the number who passed from 287 to 171. The demand for 4th Grade masters is diminishing, and under the new rule the number of candidates for the fifth grade was of course very much smaller than usual. On the other hand, the number of female candidates rose in spite of the fee from 343 to 380, and of these 190 passed against 144 last year. The following statement shows in detail the number examined and passed in each division and district.

Few or no male candidates passed from the districts of the second and third divisions, or from Coimbatore and the Nilgiris, because there are no Normal Schools preparing pupils for these examinations in any of these districts. The Ganjam and Godavery districts are also unrepresented, in the former because all the candidates failed, in the latter because the examination was disallowed. Tinnevelly and Malabar stand much ahead of the other districts.

As usual nearly two-thirds of the successful candidate mistresses belong to Madras, but many of those who passed for the third grade were only little girls from the various schools in Madras. Tinnevelly is the only other district in which the number can be yet said to be satisfactory, but the fourth and sixth divisions have made a considerable advance. The Ganjam, Godavery, Kistna, Cuddapah, Kurnool, Trichinopoly and Madura districts are wholly unrepresented this year.

Remarks on Normal Schools and the Teachers' Certificate Examination.

90. I have but little to add to the remarks which I made last year regarding the state of Normal School education in this Presidency. The promulgation of the Government Order regarding the employment as far as possible of certificated and trained teachers in Government Schools has had some effect, especially in the Madras Normal School, in getting appointments for trained men and in inducing more promising candidates to apply for admission. The remodelling of the Anglo-Vernacular and Taluq Schools has also been

beneficial to them. But after all, Government Schools are comparatively few in number, and as a general rule, Normal students are not in much request in aided or Local Fund Schools. The revision of the salary grant rules, which has been recently ordered, will probably improve the prospects of trained masters. It will however, I think, be necessary to go back to the old system of binding persons who enter a Normal School to at least go through the course, for nothing can be more unsatisfactory than the way in which men are now making a mere convenience of the Normal School, deserting it at the first opportunity and pocketing the amount which they have drawn in the shape of a scholarship.

Measures have been taken during the year for doing away as far as possible with the system of preparing Normal students for the fourth grade examination, and both at Trichinopoly and Vellore, no difficulty has been found in inducing men who have already matriculated to enter the Normal Schools for the purpose of being trained. It is probable that in course of time trained matriculates will everywhere fill the posts which have been hitherto occupied by fourth grade men.

The present system of throwing the Teachers' Certificate examination open to all female candidates, without any limit of age and without reference to the fact whether the candidates intend to become schoolmistresses or not, is attended with some disadvantages. These examinations are used by order of Government as a substitute for a middle class examination, but it does not seem altogether appropriate that schoolmistresses' certificates should be given to young persons who are in many respects quite unfit to be employed as teachers, nor can it be said that the examination is a very suitable one for persons who do not intend to become schoolmistresses. There are many subjects which a young girl might study with more profit than "method and school management." The middle-class examination proposed by me was intended to supply the want, which has led to the anomalous system which now prevails, but Government have declined to allow it a trial, and I do not at present see any other remedy.

XI. Books.

Registration of Books.

91. The report of the Registrar of Books shows that there has been a decrease in the number of works registered. These are classified as follows under the two sets of heads prescribed by the Government of India.

First classification.	1875-76.	1876-77.	Second classification.	1875-76.	1876-77.
Books	311	364	Original...	140	145
Pamphlets	414	321	Translations	49	10
Periodicals	48	69	Re-publications ...	592	604
Miscellaneous ...	8	5			
Total...	781	759	Total...	781	759

The most important items in the first of these statements are books and periodicals, and in the second, original works, and in all these there has been some increase.

The following statement shows the places at which these works were published and compares the out-turn of the two years. The number of presses employed in the publication of the books registered during the year is also given. There may of course be other presses which have not come under the Registrar's cognizance.

Towns.	English Works.		Vernacular Works, including works partly Vernacular.		Total.		Presses.	
	1875-76.	1876-77.	1875-76.	1876-77,	1875-76	1876-77	1875-76.	1876-77.
Madras	122	100	494	492	616	592	48	54
Cochin	...	...	23	54	23	54	1	4

Total...	125	106	656	653	781	759	68	75

The only towns which show any marked increase are Cochin, Mangalore, Palamcottah and Calicut. At Madras, although more presses have been at work, fewer works have been registered, and both Tellicherry and Vizagapatam show a large falling off. The work done in the remaining towns is insignificant.

The following statement shows the languages in which these books are written.

Languages.	1875-76.	1876-77.

Total...	781	759

There is a considerable falling off in the number of English books and a large increase in the number of Malayalam and Canarese books. Sourashtrum, which appears for the first time in the list, is stated to be a dialect spoken by the silk-weavers of Tanjore, Madura and Salem, of which an alphabet has been published. It may be observed that not a single Sanscrit work has been brought out in the Devanagari character during the last two years. This is specially to be regretted in the case of Sanscrit works written by the natives of Southern India, as such works can scarcely become known beyond the limits of this Presidency, unless they are printed in the Devanagari character.

In the following statement the books are classified by subjects.

Subjects.	1875-76.			1876-77.		
	English.	Vernacular.	Total.	English.	Vernacular.	Total.
Biography	1	3	4	...	3	3
Drama	2	21	23	2	15	17

Voyages and Travels... ...	1	...	1	1	...	1
Total...	115	666	781	106	653	759

As usual nearly half the books published are of a religious character, while most of the others fall under language, poetry and miscellaneous. The Registrar remarks that "of these books, 165 are educational in their aim, the corresponding figure for the last official year being 135," and that "this advance shows that the Government and aided schools are steadily influencing the out-turn of the presses of this Presidency". The most remarkable English work published during the year is Dr. Burnell's Monograph on the Aindra School of Sanscrit Grammarians. In Sanscrit the Registrar specially notices the Yadavabhadayam, the Hamsa Sandesam and the Subhashita Nini as poems of great merit by Vedanta Charyar, a native of Southern India, hitherto unpublished and therefore little known in upper India or Europe, and the Probodhachandrodaya, a classical drama about two centuries old. A good English and Canarese Dictionary for schools has been brought out by the Basel Mission, which has already rendered good service to the cause of education by its various publications. Among purely Vernacular works, V. Vasudeva Sastri's Telugu adaptation of Shakespeare's Julius Cæsar is deserving of note. It is written entirely in iambics, which is an innovation in Telugu literature.

The growing inattention of native publishers to the provisions of the law of copyright has been noticed in former reports. I mentioned last year that a notification on the subject had been published in English and the Vernacular languages. This measure seems to have had the desired effect, as the registrations of copyright have risen this year from 60 to 79.

Book Department.

92. The following are the main features of the working of the Book Department during the year.

Towards the end of the year a large number of obsolete and unserviceable books and maps were sent for sale by auction. The value of this stock at depôt prices was Rs. 10,918-6-2. As the auction was held after the close of the official year, the proceeds of the sale will be credited during the current year, but, it has been ascertained that the books realized only Rs. 457-11-3.

The nominal value of the Curator's stock at the end of last year was Rs. 1,48,160-1-10. This year, mainly owing to the withdrawal of the books and maps above referred to, the value of the stock on hand was reduced to Rs 1,40,364-6-8.

The number of books and maps printed and published during the last two years is shown in the margin. The margin of profit is 55 against 66 per cent. last year. "This decrease" the Curator observes, "is to be ascribed partly to our effort to keep down the prices of all new publications, partly to the increased outlay on the Anglo-Vernacular Dictionaries re-printed during the period under review by the Christian Knowledge Society's Press, whose charges for the variety of excellent type employed necessarily exceeds those of other printing establishments in Madras, but chiefly to the fact that we have avoided printing and adding to stock, editions of more than a limited size of other books pending the anticipated changes in the text books for Government Schools." The number of editions of books brought out was 24, of which 3 were in English, 10 in Tamil, 8 in Telugu, 2 in Canarese and one in Malayalam. The only new books were the Poetical Anthology No. II in Tamil, and the Poetical Anthology No. I in Telugu. In addition to these books, Johnson's Rasselas in Tamil and the Outlines of Geography in Telugu have passed through the press and were in the hands of the binders at the close of the year. They have since appeared in cloth cases with blind lettering.

Years.	Copies.	Actual cost.			Value.		
		Rs.	A.	P.	Rs.	A.	P.
1875-76...	1,93,375	13,656	1	11	22,734	6	0
1876-77...	2,64,500	21,475	12	7	33,375	...	...

The completion of the series of vernacular district maps, projected by Mr. Barren, was reported last year, and nothing further has been done in the way of maps. The Curator reports that there is still very little demand for the excellent wall maps of Asia and Europe, which were prepared some years ago in England with Tamil names for the use of Local Fund Schools and other Elementary Schools in the Tamil districts. A cheap vernacular Atlas seems needed for village schools and girls' schools, and the Madras School Book Society have at my suggestion resolved to bring one out.

"The preparation of the new series of English and Vernacular text books is advancing slowly. The absence of Dr. John Bradshaw, who is the Editor of the English readers, has Retarded the progress of the work. The only book which has actually appeared is Mr. Garthwaite's First English Reader, of which a small tentative edition has been published with Canarese and Malayalam notes. Mr. Marden's Third English Reader and Mr. Barrow's Fourth English Reader are however completed, and a considerable portion of both has been printed. Mr. Fowler, who is preparing the sixth English Reader is in England. The preparation of the second English Reader has been recently assigned to Mr. Garthwaite. Mr. Garthwaite has finished the first part of the Tamil First Book and Mr. Joyes has completed the Second Tamil Book. Mr. Gopal Row having requested to be relieved of the duty of preparing the Third Tamil Book, the work has been transferred to Mr. Viziarungum Moodelliar. Mr. Krishnamacharlu has made considerable progress with the Fourth Tamil Book, which is entirely new. The preparation of a new History of India has been recently undertaken by Dr. Hunter.

Years.	Copies.	Prime cost.			Value at Depôt prices.		
		RS.	A.	P.	RS.	A.	P.
1875-76...	63,937	20,517	3	3	28,199	3	7
1876-77...	78,459	24,612	9	6	35,312	6	2

It will be seen from the statement in the margin that there has been a considerable increase in the number and value of the books and maps purchased during the year.

An abstract of the transactions connected with the importation of English books, through the Secretary of State is given in the margin. The Curator observes that comparing the net cost of the supplies received with the value put on them at Depôt prices, the account gives a profit of only 42½ per cent. against 46 per cent. last year. "This steady diminution of the margin of profit, in spite of the increase in the quantity and value of the supplies imported, is unsatisfactory, and is chiefly due to the fact that all the charges are allowed to be deducted from the nominal rate of 25 per cent. discount originally offered by the suppliers to the India Office, the net discount being thereby brought down to something like 15 per cent.

Years.	Prime cost.	Value at Depôt prices.			Value at published prices.

Total...	3,02,184	3,22,951	63,378	11	1	65,548	5	2

The sales to Local Fund Boards amounted to Rs. 14,746-14-10 against Rs. 14,344-7-6. The smallness of the increase is ascribed to the famine.

The Book Department has been for several years self-supporting. During the year under review, the ordinary receipts were Rs 64,917-9-10 and more than covered the regular charges, viz., Rs. 62,210-14-2, but it will be seen from the following account that the transactions of the year show on the whole an apparent deficit of Rs. 4,598-9-0, owing to the clearance which has been effected of unserviceable books and maps. The deficit has been met from the surplus receipts which have occurred in past years and which are now standing at the credit of the department.

The general management of the Book Department has been very creditable to Mr. V. Krishnamacharlu.

Revision of Malayalam and Canarese text-books.

93. No report has been yet submitted by the Committees appointed in February 1875 to report on Malayalam and Canarese text-books.

Translator.

94. The Tamil Translator who works under the supervision of the Professor of Vernacular Literature was engaged during the year in translating Smiles' Self-Help, in compiling a glossary of difficult words which occur in the Tamil Anthology No. I and in correcting proofs of various books which were brought out during the year.

Madras School Book and Vernacular Literature Society.

95. From the report of the Madras School Book and Vernacular Literature Society for 1876, it appears that the school books re-printed during the year amounted to 95,000 copies. The first part of a revised Tamil edition of Morris's History of India has been published and the second part is in the press. The revision of the Telugu translation of this book has also been completed. Two hundred pages of the Telugu Dictionary which the Society is bringing out have been printed. The plan already introduced of re-publishing the Society's Short account of the Madras Presidency in little Tamil and Telugu manuals containing the general introduction and one district has been extended to other languages. The Geography of Malabar has appeared in this new form in Malayalam and similar manuals are to be issued in Hindustani. The Janavinodini, the Society's magazine, which is edited in Tamil and Telugu by Mr. V. Kristnama Chariar, is steadily extending its circulation and has now 518 Tamil and 333 Telugu subscribers. 8,745 little tracts, containing selected articles from this magazine, were sold during the year. The Society has resolved to bring out a carefully edited series of expurgated Tamil and Telugu classics for the use of schools, and arrangements have been made for beginning with the first Kandam of the Tamil Ramayana and the first Parvam of the Telugu Mahabharata. Dr. Bower has offered the Society the copyright of his translation of the Nannul, the great Tamil Grammar. Several of the Society's publications, among which may be named the Telugu and Tamil versions of the Dasa Kumara Charitram, and the Telugu tales founded on Sakuntala and Veni Samhara, have been named as text-books for the University examinations of 1877 and 1878. A Tamil tale founded on the Sanscrit drama of Ratnavali is nearly

ready, and the Tamil translation of Lamb's tales from Shakespeare is going on. King Lear and Romeo and Juliet have been recently published; Cymbeline and Othello will follow shortly. Arrangements have also been made for the translation of Miss Edgeworth's Little Merchants and Miss Frere's Old Deccan days into Tamil and Telugu and for the publication in Hindustani of Aladdin and the Wonderful Lamp, and in Telugu of Sindbad the sailor. The Society, although its grant has been reduced from Rs. 2,000 to Rs. 1,500 a year, is still in a prosperous condition. At the end of the year there was a cash balance of Rs. 7,116-12-10 and Rs. 25,000 in Government securities. Some anxiety is however felt with regard to the future. It is only from its school books that the Society derives any profit, and several of these will soon be superseded by the new series now under preparation. Nearly all that the Society has done for the improvement of vernacular literature has been attended with some loss, and many years must probably pass before a taste for a healthy vernacular literature can be created. Local Fund Boards and Municipalities might however do something in this direction by establishing small vernacular libraries in their schools.

Library of Oriental Manuscripts.

96. Dr. Oppert has submitted the following report on the work done in the Library of Oriental Manuscripts during the year.

"The cataloguing of the Sanscrit Telugu, Tamil and Canarese Manuscripts has been completed, but Malayalam, Mahratta, Hindustani, Persian, Arabic, Burmese and Javanese Manuscripts are still uncatalogued. I suggest that as the most important and by far most numerable part of the manuscripts is now properly catalogued, its publication might be commenced.

"Besides this cataloguing of manuscripts the volumes in the Mackenzie collection containing inscriptions were also investigated and an index for all those inscriptions is in preparation. I myself have compiled an alphabetic index of the so-called 62 Volumes of Local Records which is nearly finished.

"No manuscripts of any importance having been offered me in this year I have not bought any.

"The Library being open every day, Government Holidays excepted, between 10-30 A. M. and 5 P. M., it is daily visited and consulted by Native Gentlemen and an attendance book, in which they sign their names, lies on the table.

"In consequence of the orders of the Government of India, I have written to many Pundits, heads of Mathams and Temples asking for lists of manuscripts in their possession, and some have already complied with my wish by sending such lists. The more important I intend to publish, and I hope to be able to report next year more fully on this subject."

XII. General Statistics.

Number of Schools and Scholars.

97. It will be seen from the subjoined table that the number of institutions in connexion with the department has fallen from 10,236 to 10,121, and that the number of scholars has risen from 284,480 to 287,948. That there should be a decrease of 115 schools and an increase of only 3,468 scholars against an increase of 1,085 schools and 28,743 scholars in 1875-76 is of course to be regretted, but considering the nature of the famine which has prevailed, it is perhaps surprising that the falling off has been so small. The increase in the number of Colleges, Higher Class schools, Normal schools and Professional schools, and the decrease in the number of Middle Class schools, have been already accounted for. The transfer of the Doveton Girls' school from the list of Higher Class Girls' schools to the list of Higher Class Mixed schools has also been explained. The large apparent decrease in the number of pupils in Lower Class Boys' schools must be taken in connexion with the still larger increase in the number of pupils in Mixed Lower Class schools, and it must be remembered that under both these heads are now included a large number of pupils in what have been hitherto treated as Middle Class Results schools.

The following table divides the schools into four great classes and shows the increase and decrease under each head. Three Government Schools have been closed during the year, viz. the Taluq Schools of Poneri, Kunnatur and Cheyur. On the other hand the opening of the School of Agriculture and of the Normal School of Tellicherry and the transfer to Government of the Girls' Schools at Oossoor and Cossapet (Vellore) have more than counterbalanced the disappearance of the three Taluq Schools from the list of Government Schools.

Distribution of Schools in four great classes.	1875-76.		1876-77.					
					Increase.		Decrease.

The next table shows the distribution of schools by districts. The districts which exhibit the greatest increase in the number of schools are Tanjore, Ganjam, Godavery, South Arcot and Trichinopoly. Eight districts, viz. Coimbatore, Madura, Chingleput, Cuddapah, Bellary, Kurnool, Tinnevelly and Madras show a decrease. Under the head of pupils the largest increases are observable in Tanjore, Malabar, Godavery, South Arcot, Ganjam and Trichinopoly. Large decreases are seen in Coimbatore, Madura, Chingleput, Bellary, Kurnool, Cuddapah, and smaller decreases in Nellore and Madras. A glance at the table shows the close connexion between the famine and the falling off in the number of schools and scholars.

99. The following table compares the area and population of each division and district with the number of pupils under instruction in schools connected with the department. The sixth division has changed places with the fifth, but the divisions which show the greatest advance are the first and fourth. The third and fifth divisions have both fallen off a little, but the decline in the second division is conspicuous. Turning to individual districts it will be seen that the Godavery, Trichinopoly and Ganjam Districts have gained two or three places in the list, while the Coimbatore, Kurnool, Bellary, North Arcot and Madura districts have lost from six to three places. The relative position of the Madras, Kistna, Tanjore and Cuddapah districts remains unaltered, and that of the remaining districts is nearly the same as it was.

Area and population compared with extent of education.

Districts.	Area in square miles.	Population.	Scholars connected with the department.		Proportion of population to one pupil.

100. From a table given in the appendix it will be seen that the number of schools in municipalities has fallen from 1,212 to 1,206 while the number of pupils has risen from 69,941 to 70,750. In Local Fund circles the number of schools has fallen from 9,024 to

Schools in Municipalities and Local Fund circles.

8,915 and the number of pupils has risen from 2,14,539 to 2,17,198. A list is given in the margin of the more important towns in which the number of pupils under instruction exceeds a thousand. The smallest municipality is Ghooty with 3 schools and 88 pupils. On the whole nearly 25 per cent. of the number of pupils connected with the department are in municipalities and 75 per cent. in Local Fund circles. It is however only in a very rough kind of way that these figures can be regarded as representing the town and rural population respectively. There are many tolerably important towns which have not been constituted municipalities and there are schools of the higher class in some of these towns, such as Nursapur, Chingleput, Sydapet, Chittoor, Tranquebar and Ramnad.

101. The following table shows the race and sex of the pupils under instruction. On the whole, or taking the boys alone, the increases are confined to Hindus, and Pariahs, but taking the girls separately, there are increases under every head except Europeans and East Indians. The proportion which the number of pupils under instruction bears to the population of the several races entered in the table is much the same as last year, the main advance being under the head of Pariahs.

Race and Sex of pupils.

102. The table in the margin shows the number of boys and girls studying different languages. Pupils who study more than one language are entered under two or more heads. In 1872-73 the number of boys learning English suddenly rose from 38,726 to 51,417, but it fell again in the following year to 48,020, and although it has been slowly rising again and has during the past year made a somewhat larger stride than usual, it has not yet reached its original figure. As Government have recently expressed their willingness to allow English to be taught under certain restrictions in Local Fund Schools, it is possible that our future advance in this direction may be more rapid than it has been of late years. Turning to the Vernacular languages, it will be seen that as regards boys, there is an increase under Malayalam and Ooriya, and a decrease under Tamil, Telugu, Canarese and Hindustani. The annual fluctuations regarding Arabic and Sanscrit are so great, mainly owing to the varying character of the returns from village schools on the Western coast, that very little reliance can be placed on the figures relating to these languages. As regards girls there is an increase under every language except English and Arabic. In 1872-73 and 1873-74 there was not a single girl, learning Hindustani. In the following year 61 were returned and the present number, although still very small, shows that Mahomedan girls, whose Vernacular is Hindustani, are beginning to receive instruction in schools under inspection.

103. The following table shows the amount realized in school fees during the last ten years. A column has been added this year for schools under Local Fund Boards and Municipalities since their establishment in 1871-72. At first these schools were treated in the returns as private schools and the fees levied in them were shown under private institutions. Afterwards they were classed as Government institutions and the fees collected in them were shown under the head of Government schools, but as this arrangement is an inconvenient one, these collections are now exhibited separately.

* The fees, Rupees 5,965-8-0, of the Calicut Provincial School for 1874-75 have been transferred to that year, to which they properly belong. In the last report they appeared against the year 1875-76, owing to their having been irregularly paid into the treasury after the termination of the year 1874-75.

The following table shows the average fee in these three classes of schools at the commencement and end of the decade reckoned both upon the average number on the rolls and the average daily attendance The figures for Government schools are, it will be observed, very much higher than in private schools, although there are several hundreds of pupils in the Hill schools, Normal schools and Girls' schools who pay no fees whatever. In private schools the average is necessarily affected by the low fees levied in many of the Results schools and Girls' schools. Many of the Local Fund schools are free schools and in nearly all of them the fees are as a rule very low. As might therefore be expected they stand much below the private schools.

Year.	Average Fee according to Average Number on the Rolls.						Average Fee according to Average Daily Attendance.

The scale of school fees has been raised twice during the period shown in the table, viz., on the 1st January 1869 and on the 1st September 1871. In November 1875 a Committee was appointed to report on the question of again raising the rates of fees in Government and Aided Colleges and Schools. The Committee submitted their report in February 1877, but as orders were passed on the report in May, the subject will be noticed in my next report.

104. The following table shows in the same form as last year the percentage of fees to total cost in Government and aided institutions, with the addition of two columns showing the average cost to Government per pupil in each of the several classes of institutions.

Percentage of fees to total cost.

In the College Department of Colleges and Collegiate schools there is a difference of 1·9 per cent in favor of aided institutions, while in the higher and middle departments there is a difference of 11·1 and 36·4 per cent in favor of Government institutions. Schools of the higher and middle class under the management of the Educational Department are throughout more self-supporting than aided schools. Local Fund Schools of the higher class show a higher percentage than ordinary Government schools in the upper department, a slightly lower percentage in the middle department and a very much lower percentage in the lower department. There are however only two schools of this class, viz., the Local Fund schools of Palghaut and Sydapet. Local Fund and Municipal schools of the middle class are less self-supporting than aided schools of the same class. The few lower class schools which are maintained from Provincial funds are all of a more or less exceptional character and the percentage in them is lower than in Local Fund and Municipal schools. Aided schools of the lower class show as usual a very high percentage, although not quite so high as last year, but as remarked in former reports it is uncertain how far the returns of village schools can be trusted.

It might be supposed that the average cost to Government of educating each pupil would be throughout greater in Government than in aided institutions. This however is not the case, as there are some remarkable exceptions. Thus in the Aided Colleges the average cost to Government of every boy in the middle department is Rupees 7-6-4 while in Government Colleges there is a profit on every boy in the middle department. Again in Government schools of the higher class the cost to Government of a pupil in the middle department is Rupees 4-0-5 against Rupees 9-1-5 in aided schools, and in the lower department the cost of a boy in a Government school is Rupees 3-15-3 against Rupees 4-15-0 in an aided school.

Institutions in which some of the charges are met by endowments are really somewhat more self-supporting than they are shown to be in this or other similar tables. Thus in the Law Class of the Presidency College the total cost is put down at Rupees 3,950-13-3 and the fees at Rupees 3,780, but this total cost includes Rupees 240 on account of disbursements for the Morehead Scholarship, against which there are corresponding receipts under the head of endowments. The Law Class was thus more than self-supporting.

The next table compares the percentage of fees to total cost in individual Government and private Colleges and Collegiate schools.

The Provincial School of Rajahmundry, the S. P. G. High school, Tanjore, the Madras Christian College, the Provincial school of Calicut, the S. P. G. High school, Trichinopoly and the Noble High school, Masulipatam, all show some advance on last year. The other institutions have more or less retrograded. No lower department exists in the Government institutions. In the aided institutions the percentage of fees in this department ranges between 30·8 and 99·5. The middle department yields a profit in all the Government institutions except the Presidency College, but only in two of the aided institutions, viz., the S. P. G. schools at Tanjore and Trichinopoly. The upper department has become almost self-supporting in the Government institutions at Rajahmundry and Combaconum. The institutions in which this department is the least self-supporting are the Noble High school, Masulipatam, and the Maharajah's High school, Vizianagram. The College department cannot of course be expected to be self-supporting. The highest percentage is that reached in the Madras Christian Col- viz, 25·4 and the lowest is that shown in the Samasthanum school of Vizianagram viz, 4·3. The low percentages in this department are partly due to the small size of the College classes in some of the Mofussil institutions.

The following table compares the percentage of fees to total cost in individual Government and Private schools of the higher class.

The percentages in Government schools range between 66·5 and 32·8 against 69·7 and 30·5 last year, and in aided schools between 88·4 and 7 against 89·2 and 6·1. There are only two Government institutions, viz., the High school, Palghaut, and the Zillah school, Salem, in which the lower department is self-supporting, but then it must be remembered that Palghaut is one of the few schools in which a first or lowest class exists. Among the aided schools this department is nearly self-supporting in the Town school of Combaconum. The middle department yields a profit in three Government and three private institutions, viz., the Zillah schools of Salem, Chittoor and Madura, the Hindu school at Viraragavapuram (Tinnevelly), the Balura Patasala and the Town school, Combaconum.

The following is a list of Middle-class schools in which the income from fees exceeds half the expenditure. Last year three of these schools were self-supporting. This is not the case this year in any school, but it must be remembered that the standard of instruction in many of the Taluk schools has been raised and that masters have been appointed with higher qualifications and larger salaries.

Government Schools of the Middle-Class.	Percentage of Fees to Total Cost.

105. The following is a list of schools aided on the salary grant system, in which the fees together with the Government grant-in-aid expenditure exceed the total expenditure. The list is as usual headed by the Town school of Combaconum and the Hindu school of Viraragavapuram (Tinnevelly). With a few exceptions most of the other schools in the list are under native management.

Salary grant schools in which the receipts from Government and from school fees exceed the expenditure.

107. The subjoined table gives the expenditure from the educational Building Fund during the past year. Under the head of repairs the most important work was in connexion with the Zillah school houses at Cuddapah and Tellicherry, the expenditure on the former having amounted to Rupees 4,649-15-10 and on the latter to Rupees 1,722-4-0. Under the head of original works the chief expenditure was in connexion with the buildings noted in the margin.

Expenditure on educational buildings.

	RS.	A.	P.

Total from Public Works Budget...	80,334	11	1	Total from Educational Budget	2,919	0	0

I mentioned in my last report that the capital of the Educational Building Fund was reduced on the 31st March 1876 to Rupees 4,29,500. The balance at debit against this fund on the same date was Rupees 18,039-8-3. During the course of the year Rupees 1,20,000 was diverted from capital to meet this deficit and the current charges, while Rupees 15,925-5-4 was realized by interest, Rupees 1,286 by voluntary contributions received through the Collector of Vizagapatam and Rupees 32-2-0 by Public Works receipts. At the close of the year

* Anglo-Vernacular School, Sholavandam.

† Roman Catholic Orphanage, Cannanore.

1876-77 the capital was reduced to 3,09,500 and there was a balance at credit of Rupees 35,950-4-0 The Senate house, which has been for some years the chief drain on this fund, is now approaching completion, but the position of the Educational Building Fund cannot be viewed without some anxiety.

Growth of the Grant-in-aid system.

108. The following statement shows the growth of the Grant-in-aid system during the last ten years. It differs from the statements of previous years in showing the sums paid instead of the sums sanctioned on account of results grants from Local and Municipal Funds. It does not include building grants, or expenditure on salary grant schools from Local or Municipal Funds.

Expenditure on Colleges and Schools.

109. The following statements show the expenditure from Provincial and other funds in Government and private Colleges and Schools. Under the orders of Government certain charitable institutions which receive aid from the State, but not from educational funds, have been removed from inspection and are no longer required to furnish returns to this department.

112. The following is a summary of Local Fund and Municipal expenditure prepared from information supplied by the Presidents of Local Fund Boards and Municipalities. As usual it is incomplete, as statements have not been received from the Local Fund Boards of Tanjore and Negapatam and the Municipalities of Combaconum, Madura, Tinnevelly, Palamcottah and Tuticorin.

Nature of Charge.	By Local Fund Boards.	By Municipalities.
	RS. A. P.	RS. A. P.
Inspecting School Masters	50,982 7 6	2,607 3 6
Establishments of Local Fund and Municipal Schools.	1,62,156 1 11	24,501 11 10
Salary grants	1,265 13 1	5,617 3 7
Results grants	1,62,527 7 0	30,242 14 10
Purchase of Books	12,555 14 0	... ...
Commission on sale of books	930 4 4	... .
Buildings	3,920 4 9	1,716 12 9
Contribution to Municipalities for Schools ...	... ...	24 4 0
Do. to Local Funds for inspection ...	... ...	2,371 8 8
Furniture	325 2 8	... ...
Miscellaneous	2,374 5 10	644 3 11
Total ...	3,97,037 13 1	67,725 15 1

Gross expenditure on education.

113. The gross sum expended on education during 1876-77 may be thus stated:—

By Government	12,76,368	7	2
By Local Fund Boards	3,97,037	13	1
By Municipalities	67,725	15	1
By Private Agency	10,33,994	5	0
Total...	27,75,126	8	4
Add amount expended from Charitable Funds by Government on account of the Lawrence Asylum...	48,000	0	0
Do. Private Schools ...	14,040	0	0
Grand Total...	28,37,166	8	4

Distribution of Expenditure.

114. The following statement shows the distribution of this expenditure under major and minor heads and the percentage for each head.

Grand Total of General and Special Instruction.	9,99,750	7,43,062	11,01,748	18,44,810	28,44,560	...

This table may be summarized as shown in the margin. The figures do not materially differ from those of last year except in showing a larger percentage for primary instruction and a smaller percentage for secondary instruction, which partly arises from the fact that a good many schools which have been hitherto returned as Middle-Class Schools are now classed as Elementary Schools.

Superintendence	9·61
General Instruction.	
Superior Instruction.	6·05
Secondary do.	21·73
Primary do.	48·72
Miscellaneous...	5·93
Special Instruction.	
Superior Instruction in Law, Medicine and Civil Engineering	·48
Secondary Instruction in Professional Colleges and Technical Schools	3·90
Normal Schools	2·91
Scholarships	·61

I have the honor to be,
Sir,
Your most obedient servant,
R. M. MACDONALD,
Director of Public Instruction.

OFFICE OF THE DIRECTOR OF PUBLIC INSTRUCTION,
MADRAS, 13*th December* 1877.

ERRATA.
